Preface	ix
Preface to First Edition	xi
1 Introduction	1
1.1 Structure of this book	2
1.2 The risk assessment process	6
2 Quantitative Risk Analysis, Uncertainty and Variability	13
2.1 Method of moments	14
2.2 Exact algebraic solutions	15
2.3 Monte Carlo simulation	16
2.4 Uncertainty and variability	18
3 Probability Theory and Statistics	29
3.1 Probability distribution equations	29
3.2 Statistical measures	31
3.3 Probability rules and Venn diagrams	36
3.4 Probability theorems	41
3.5 Least squares linear regression	48
3.6 Rank order correlation coefficient	53
3.7 Reliability theory	55
4 How Monte Carlo Simulation Works	57
4.1 Random sampling from input distributions	57
4.2 Random number generator seeds	64
4.3 Rank order correlation	64
5 Stochastic Processes	67
5.1 Introduction	67
5.2 The binomial process	67
5.3 The Poisson process	73
5.4 The hypergeometric process	79
5.5 Renewal processes	84
5.6 Mixture distributions	86
5.7 Miscellaneous examples	87

6	Probability Distributions	99
6.1	Discrete and continuous distributions	99
6.2	Bounded and unbounded distributions	101
6.3	Parametric and non-parametric distributions	102
6.4	Probability distribution functions	103
6.5	Approximation of one distribution with another	131
6.6	Recursive formulae for discrete distributions	140
6.7	A visual observation on the behaviour of distributions	143
7	Quantifying Uncertainty About Model Parameters	145
7.1	Classical statistics	146
7.2	Bayesian inference	149
7.3	The Bootstrap	181
7.4	Maximum entropy principle	191
7.5	Which technique should you use?	192
7.6	Examples to compare traditional statistical inference, Bayesian inference and the Bootstrap	193
7.7	Adding uncertainty in simple linear least squares regression analysis	193
8	Building a Risk Analysis Model	201
8.1	Is it possible to model the problem?	201
8.2	Types of risk analysis model	202
8.3	Designing a spreadsheet model	203
8.4	Separating uncertainty and variability in a risk analysis model	203
8.5	Splitting up a low-probability model	209
8.6	Including rare events in a model	212
8.7	Setting out a model clearly	214
8.8	Model uncertainty	214
8.9	Risk analysis software	215
9	Determining Distributions of Variability from Data	217
9.1	Analysing the properties of the observed data	218
9.2	Fitting a non-parametric distribution to the observed data	223
9.3	Fitting a first-order parametric distribution to observed data	235
9.4	Fitting a second-order parametric distribution to observed data	252
10	Defining Distributions from Expert Opinion	263
10.1	Introduction	263
10.2	Sources of error in subjective estimation	264
10.3	Modelling techniques	271
10.4	Conducting a brainstorming session	283
10.5	Conducting the interview	284
11	Modelling Dependencies	291
11.1	Introduction	291
11.2	Rank order correlation	294

11.3	Correlation matrices	300
11.4	The envelope method	303
11.5	Multiple correlation using a look-up table	311
12	Time Series Projections	313
12.1	Comparison of forecasting techniques	313
12.2	Naïve forecasts	314
12.3	Short-term forecasting	317
12.4	Medium-term forecasting	322
12.5	Long-term forecasting	327
12.6	A variable-rate Poisson process	329
13	Project Risk Analysis	335
13.1	Cost risk analysis	336
13.2	Schedule risk analysis	340
13.3	Project risk analysis software	347
14	Animal Import and Food Safety Risk Assessment	349
14.1	Testing for an infected animal	351
14.2	Estimating true prevalence in a population	357
14.3	Importing problems	358
14.4	Confidence of detecting an infected group	361
14.5	Miscellaneous animal health and food safety problems	364
15	Presenting and Interpreting Risk Analysis Results	373
15.1	Writing a risk analysis report	373
15.2	Explaining a model's assumptions	374
15.3	Graphical presentation of a model's results	379
15.4	Statistical methods of analysing results	392
15.5	Using discounted cashflow calculations in risk analysis	403
	References	407
	Bibliography	411
	Index	413
