<b>Huygens and Barrow, Newton and Hooke . . . . .</b>	<b>7</b>
---	----------

## **Chapter 1.**

### **The law of universal gravitation**

§ 1. Newton and Hooke . . . . .	11
§ 2. The problem of falling bodies . . . . .	16
§ 3. The inverse square law . . . . .	22
§ 4. The <i>Principia</i> . . . . .	24
§ 5. Attraction of spheres . . . . .	26
§ 6. Did Newton prove that orbits are elliptic? . . . . .	30

## **Chapter 2.**

### **Mathematical analysis**

§ 7. Analysis by means of power series . . . . .	35
§ 8. The Newton polygon . . . . .	36
§ 9. Barrow . . . . .	38
§10. Taylor series . . . . .	42
§11. Leibniz . . . . .	44
§12. Discussion on the invention of analysis . . . . .	49

## **Chapter 3.**

### **From evolvents to quasicrystals**

§13. The evolvents of Huygens . . . . .	53
§14. The wave fronts of Huygens . . . . .	56
§15. Evolvents and the icosahedron . . . . .	58
§16. The icosahedron and quasicrystals . . . . .	62

## Chapter 4.

### Celestial mechanics

§17. Newton after the <i>Principia</i> . . . . .	67
§18. The natural philosophy of Newton . . . . .	68
§19. The triumphs of celestial mechanics . . . . .	69
§20. Laplace's theorem on stability . . . . .	71
§21. Will the Moon fall to Earth? . . . . .	72
§22. The three body problem . . . . .	74
§23. The Titius-Bode law and the minor planets . . . . .	75
§24. Gaps and resonances . . . . .	77

## Chapter 5.

### Kepler's second law and the topology of Abelian integrals

§25. Newton's theorem on the transcendence of integrals	83
§26. Local and global algebraicity . . . . .	86
§27. Newton's theorem on local non-algebraicity . . . . .	88
§28. Analyticity of smooth algebraic curves . . . . .	89
§29. Algebraicity of locally algebraically integrable ovals	90
§30. Algebraically non-integrable curves with singularities	91
§31. Newton's proof and modern mathematics . . . . .	93

## Appendix 1.

Proof that orbits are elliptic . . . . .	95
--	----

## Appendix 2.

Lemma XXVIII of Newton's <i>Principia</i> . . . . .	101
---	-----

Notes . . . . .	107
