Contents

Preface IX
Introduction to the English Translation XIII

Chapter One
Mathematical Logic (by Z.A. Kuzicheva) 1
The Prehistory of Mathematical Logic 1
Leibniz's Symbolic Logic 2
The Quantification of a Predicate 9
The "Formal Logic" of A. De Morgan 10
Boole's Algebra of Logic 14
Jevons' Algebra of Logic 20
Venn's Symbolic Logic 24
Schröder's and Poretskiĭ's Logical Algebra 27
Conclusion 33

Chapter Two
Algebra and Algebraic Number Theory
(by I.G. Bashmakova and A.N. Rudakov with the assistance of A.N. Parshin and E.I. Slavutin) 35
1 Survey of the Evolution of Algebra and of the Theory of Algebraic Numbers During the Period of 1800–1870 35
2 The Evolution of Algebra 41
Algebraic Proofs of the Fundamental Theorem of Algebra in the 18th Century 41
C.F. Gauss' First Proof 43
C.F. Gauss' Second Proof 44
The Kronecker Construction 47

The Theory of Equations 50
Carl Friedrich Gauss 50
Solution of the Cyclotomic Equation 52
Niels Henrik Abel 55
Evariste Galois 57
The Algebraic Work of Evariste Galois 58
The First Steps in the Evolution of Group Theory 63
The Evolution of Linear Algebra 68
Hypercomplex Numbers 72
William Rowan Hamilton 74
Matrix Algebra 77
The Algebras of Grassmann and Clifford 78
Associative Algebras 79
The Theory of Invariants 80

3 The Theory of Algebraic Numbers and the Beginnings of Commutative Algebra 86
Disquisitiones Arithmeticae of C.F. Gauss 86
Investigation of the Number of Classes of Quadratic Forms 92
Gaussian Integers and Their Arithmetic 94
Fermat's Last Theorem. The Discovery of E. Kummer 99
Kummer's Theory 102
Difficulties. The Notion of an Integer 106
The Zolotarev Theory. Integral and p-Integral Numbers 108
Dedekind's Ideal Theory 116
On Dedekind's Method. Ideals and Cuts 123
Construction of Ideal Theory in Algebraic Function Fields 125
L. Kronecker's Divisor Theory 131

Conclusion 133

Chapter Three
Problems of Number Theory (by E.P. Ozhigova with the assistance of A.P. Yushkevich) 137

1 The Arithmetic Theory of Quadratic Forms 137
The General Theory of Forms; Ch. Hermite 137
Korkin's and Zolotarev's Works on the Theory of Quadratic Forms 144
The Investigations of A.A. Markov 151

2 Geometry of Numbers 154
Origin of the Theory 154
The Work of H.J.S. Smith 159
Geometry of Numbers: Hermann Minkowski 161
The Works of G.F. Voronoĭ 166

3 Analytic Methods in Number Theory 171
Lejeune-Dirichlet and the Theorem on Arithmetic Progressions 171
Asymptotic Laws of Number Theory 177
Chebyshev and the Theory of Distribution of Primes 182
The Ideas of Bernhard Riemann 189
Proof of the Asymptotic Law of Distribution of Prime Numbers 192
Some Applications of Analytic Number Theory 194
Arithmetic Functions and Identities. The Works of N.V. Bugaev 196

4 Transcendental Numbers 201
The Works of Joseph Liouville 201
Charles Hermite and the Proof of the Transcendence of the Number e; The Theorem of Ferdinand Lindemann 205
Conclusion 209

Chapter Four
The Theory of Probability (by B.V. Gnedenko and O.B. Sheĭnin) ... 211
Introduction 211
Laplace's Theory of Probability 212
Laplace's Theory of Errors 222
Gauss' Contribution to the Theory of Probability 226
The contributions of Poisson and Cauchy 230
Social and Anthropometric Statistics 242
The Russian School of the Theory of Probability. P.L. Chebyshev 247
New Fields of Application of the Theory of Probability. The Rise of Mathematical Statistics 268
Works of the Second Half of the 19th Century in Western Europe 276
Conclusion 280

Addendum (by O.B. Sheĭnin) 283
1. French and German Quotations 283
2. Notes 285
3. Additional Bibliography 286

Bibliography (by F.A. Medvedev) 289

Abbreviations 302

Index of Names 304
