Archival Sources	xvi
Chapter I. Some 19th-Century Algebra and Number Theory	1
1. Introduction	2
2. Ruler and Compass Constructions and Cyclotomic Fields	6
3. Equations Defining Subfields of the Cyclotomic Field	10
4. The Quadratic Subfield of the Cyclotomic Field	12
5. Lagrange Resolvents and Gauss Sums	15
6. Quadratic Reciprocity: a proof based on Gauss sums	19
7. Dirichlet's L -series and Characters mod k	20
8. Characters associated with quadratic forms	27
Chapter II. Frobenius and the Invention of Character Theory	35
1. Frobenius in Berlin and Zürich: 1850-1900	35
2. Research on Finite Groups and Number Theory: 1880-1896	40
3. Characters of Finite Groups	50
4. Group Representations and Characters	63
5. The Characters of the Symmetric Group	73
6. An Application of Character Theory: Frobenius Groups	81
Chapter III. Burnside: Representations and Structure of Finite Groups	87
1. Burnside at Cambridge and Greenwich	87
2. Burnside's Early Research on Finite Groups: 1890-1900	97
3. From Lie Groups to Representations of Finite Groups: 1898-1900	102
4. Foundations of Representation Theory: 1900-1905	111
5. The $p^a q^b$ -Theorem and Other Applications of Character Theory	120
Chapter IV. Schur: A New Beginning	129
1. Issai Schur in Berlin: 1894-1939	129
2. Schur's New Foundations of Character Theory	138
3. Joint Work of Frobenius and Schur: 1905-1906	149
4. The Schur Index	157
5. Projective Representations of Finite Groups	166
6. Permutation Groups and Centralizer Rings	172
Chapter V. Polynomial Representations of $GL_n(\mathbb{C})$	177
1. Invariant Theory and Representations of GL_n : Jacques Deruyts	177
2. Polynomial Representations of GL_n : Issai Schur	182
3. Schur's Character Formula	193

Chapter VI. Richard Brauer and Emmy Noether: 1926-1933	201
1. Richard Brauer in Berlin, Königsberg, and North America	201
2. Emmy Noether and her Impact on Representation Theory	209
3. Simple Algebras and the Brauer Group: 1926-1933	223
Chapter VII. Modular Representation Theory	235
1. Brauer and Nesbitt: Opening Moves	235
2. Nonsemisimple Algebras: Brauer, Nakayama, and Nesbitt	244
3. Blocks and the Classification of Finite Simple Groups	253
4. The Brauer Induction Theorem and its Applications	264
Bibliography	273
Index	285
