|---|-------------|
| <b>Preface</b>  | <b>ix</b>   |
| <b>About the Authors</b>  | <b>xi</b>   |
| <b>Notation</b>   | <b>xiii</b> |
| <br>  |             |
| <b>I Singular Manifolds and Differential Operators</b>          | <b>1</b>    |
| <b>1 Geometry of Singularities</b>                              | <b>3</b>    |
| 1.1 Preliminaries . . . . .                                     | 3           |
| 1.2 Manifolds with conical singularities . . . . .              | 14          |
| 1.3 Manifolds with edges . . . . .                              | 33          |
| <b>2 Elliptic Operators on Singular Manifolds</b>               | <b>45</b>   |
| 2.1 Operators on manifolds with conical singularities . . . . . | 45          |
| 2.2 Operators on manifolds with edges . . . . .                 | 50          |
| 2.3 Examples of elliptic edge operators . . . . .               | 55          |
| <br>  |             |
| <b>II Analytical Tools</b>                                      | <b>59</b>   |
| <b>3 Pseudodifferential Operators</b>                           | <b>61</b>   |
| 3.1 Preliminary remarks . . . . .                               | 61          |
| 3.2 Classical theory . . . . .                                  | 63          |
| 3.3 Operators in sections of Hilbert bundles . . . . .          | 74          |
| 3.4 Operators on singular manifolds . . . . .                   | 85          |
| 3.5 Ellipticity and finiteness theorems . . . . .               | 104         |
| 3.6 Index theorems on smooth closed manifolds . . . . .         | 112         |
| <b>4 Localization (Surgery) in Elliptic Theory</b>              | <b>123</b>  |
| 4.1 The index locality principle . . . . .                      | 123         |
| 4.2 Localization in index theory on smooth manifolds . . . . .  | 131         |

|   |  |            |
|---|--|------------|
| 4.3                                       | Surgery for the index of elliptic operators on singular manifolds . . . . .                    | 137        |
| 4.4                                       | Relative index formulas on manifolds with isolated singularities . . . . .                     | 138        |
| <b>III Topological Problems</b>           |  | <b>149</b> |
| <b>5</b>                                  | <b>Index Theory</b>  | <b>151</b> |
| 5.1                                       | Statement of the problem . . . . .   | 151        |
| 5.2                                       | Invariants of interior symbol and symmetries . . . . .   | 165        |
| 5.3                                       | Invariants of the edge symbol . . . . .  | 175        |
| 5.4                                       | Index theorems . . . . .   | 180        |
| 5.5                                       | Index on manifolds with isolated singularities . . . . .                                       | 184        |
| 5.6                                       | Supplement. Classification of elliptic symbols with symmetry and<br><i>K</i> -theory . . . . . | 189        |
| 5.7                                       | Supplement. Proof of Proposition 5.16 . . . . .  | 198        |
| <b>6</b>                                  | <b>Elliptic Edge Problems</b>  | <b>201</b> |
| 6.1                                       | Morphisms . . . . .  | 202        |
| 6.2                                       | The obstruction to ellipticity . . . . .   | 212        |
| 6.3                                       | A formula for the obstruction in topological terms . . . . .                                   | 216        |
| 6.4                                       | Examples. Obstructions for geometric operators . . . . .                                       | 222        |
| <b>IV Applications and Related Topics</b> |  | <b>227</b> |
| <b>7</b>                                  | <b>Fourier Integral Operators on Singular Manifolds</b>  | <b>229</b> |
| 7.1                                       | Homogeneous canonical (contact) transformations . . . . .                                      | 229        |
| 7.2                                       | Definition of Fourier integral operators . . . . .   | 233        |
| 7.3                                       | Properties of Fourier integral operators . . . . .   | 236        |
| 7.4                                       | The index of elliptic Fourier integral operators . . . . .                                     | 239        |
| 7.5                                       | Application to quantized contact transformations . . . . .                                     | 242        |
| 7.6                                       | Example . . . . .  | 244        |
| <b>8</b>                                  | <b>Relative Elliptic Theory</b>  | <b>247</b> |
| 8.1                                       | Analytic aspects of relative elliptic theory . . . . .   | 247        |
| 8.2                                       | Topological aspects of relative elliptic theory . . . . .                                      | 253        |
| <b>9</b>                                  | <b>Index of Geometric Operators on Manifolds with Cylindrical Ends</b>                         | <b>259</b> |
| 9.1                                       | Operators on manifolds with cylindrical ends . . . . .   | 259        |
| 9.2                                       | Index formulas . . . . .   | 261        |

|   |            |
|---|------------|
| <b>10 Homotopy Classification of Elliptic Operators</b>                 | <b>269</b> |
| 10.1 The homotopy classification problem . . . . .                      | 269        |
| 10.2 Classification on smooth manifolds . . . . .                       | 271        |
| 10.3 Atiyah–de Rham duality . . . . .                                   | 272        |
| 10.4 Abstract elliptic operators and analytic $K$ -homology . . . . .   | 274        |
| 10.5 Classification on singular manifolds . . . . .                     | 277        |
| 10.6 Some applications . . . . .  | 278        |
| <b>11 Lefschetz Formulas</b>  | <b>281</b> |
| 11.1 Main result . . . . .  | 282        |
| 11.2 Proof of the theorem . . . . .                                     | 285        |
| 11.3 Contributions of conical points as sums of residues . . . . .      | 292        |
| 11.4 Supplement. The Lefschetz number . . . . .                         | 294        |
| 11.5 Supplement. The Sternin–Shatalov method . . . . .                  | 295        |
| <b>Appendices</b>   | <b>299</b> |
| <b>A Spectral Flow</b>  | <b>299</b> |
| A.1 The classical spectral flow . . . . .                               | 299        |
| A.2 The spectral flow of families of parameter-dependent operators . .  | 305        |
| A.3 Higher spectral flows . . . . .                                     | 312        |
| <b>B Eta Invariants</b>   | <b>317</b> |
| B.1 The Atiyah–Patodi–Singer eta invariant . . . . .                    | 317        |
| B.2 The eta invariant of families with parameter (Melrose’s theory) . . | 322        |
| <b>C Index of Parameter-Dependent Elliptic Families</b>                 | <b>329</b> |
| <b>Bibliographic Remarks</b>  | <b>333</b> |
| <b>Bibliography</b>   | <b>341</b> |
| <b>Index</b>  | <b>353</b> |
