

Contents

Chapter 1. Introduction	1
1.1. Carnot-Carathéodory spaces	9
1.2. The Chow-Rashevsky's accessibility theorem and CC metrics	9
1.3. The Nagel-Stein-Wainger polynomial and the size of the CC balls	11
Chapter 2. Carnot groups	15
2.1. Carnot groups of step 2	17
2.2. The Kaplan mapping	19
2.3. Groups of Heisenberg type	20
Chapter 3. The characteristic set	23
3.1. A result of Derridj on the size of the characteristic set	23
3.2. Some geometric examples	24
3.3. Non-characteristic manifolds	24
3.4. Manifolds with controlled characteristic set	27
Chapter 4. X-variation, X-perimeter and surface measure	33
4.1. The structure of functions in $BV_{X,loc}$	33
4.2. X -Caccioppoli sets	34
4.3. X -perimeter and the perimeter measure	36
Chapter 5. Geometric estimates from above on CC balls for the perimeter measure	37
5.1. A fundamental estimate	37
5.2. The X -perimeter of a $C^{1,1}$ domain is an upper 1-Ahlfors measure	39
Chapter 6. Geometric estimates from below on CC balls for the perimeter measure	41
6.1. The relative isoperimetric inequality and Theorem 6.1	42
6.2. A basic geometric lemma	43
6.3. Further analysis for Hörmander vector fields of step 2	46
6.4. Second proof of Theorem 6.1	52
6.5. Failure of the 1-Ahlfors condition for the X -perimeter of $C^{1,\alpha}$ domains	55
Chapter 7. Fine differentiability properties of Sobolev functions	57
7.1. Poincaré inequality, fractional integrals and improved representation formulas	57
7.2. Fine mapping properties of fractional integration on metric spaces	61
7.3. Differentiation with respect to an upper Ahlfors measure	62
7.4. Upper Ahlfors measures and Hausdorff measure	63

Chapter 8. Embedding a Sobolev space into a Besov space with respect to an upper Ahlfors measure	65
8.1. Some results from harmonic analysis	65
8.2. Two simple growth-estimates	66
8.3. A key continuity estimate for a singular integral	67
8.4. The main theorem	69
Chapter 9. The extension theorem for a Besov space with respect to a lower Ahlfors measure	79
9.1. Some auxiliary results	79
9.2. Proof of Theorem 9.1	80
Chapter 10. Traces on the boundary of (ϵ, δ) domains	85
10.1. The (ϵ, δ) condition is optimal for the existence of traces	88
10.2. Characterization of the traces on the boundary	90
Chapter 11. The embedding of $B_{\beta}^p(\Omega, d\mu)$ into $L^q(\Omega, d\mu)$	93
Chapter 12. Returning to Carnot groups	99
Chapter 13. The Neumann problem	103
Chapter 14. The case of Lipschitz vector fields	109
Bibliography	111
