

Contents

Preface	vii
List of Participants	ix
An Introduction to Wave Equations RONALD E. MICKENS	1
On the Zakharov-Shabat Eigenvalue Problem MARTIN KLAUS	21
Solitons and Inverse Scattering Transform TUNCAY AKTOSUN	47
A Tail-Matching Method for the Linear Stability of Multi-Vector-Soliton Bound States JIANKE YANG	63
Trapping Light with Grating Defects R.H. GOODMAN, R.E. SLUSHER, M.I. WEINSTEIN, and M. KLAUS	83
Thermo-Elastic-Plastic Transition BOLINDRA N. BORAH	93
Regularized Quasi-Newton Method with Continuous Inversion of $F' + \varepsilon I$ for Monotone Ill-Posed Operator Equations ALEXANDRA B. SMIRNOVA	113
Transition Layers for a Singularly Perturbed Neutral Delay Differential Equation WENZHANG HUANG	125
Nonlinear Aeroacoustics Computations by the CE/SE Method CHING Y. LOH	135
Robust and Simple Non-Reflecting Boundary Conditions for the Euler Equations—A New Approach Based on the Space-Time CE/SE Method S.C. CHANG, A. HIMANSU, C.Y. LOH, X.Y. WANG, and S.T. YU	155
Physical and Numerical Modeling of Seismic Wave Propagation G. TANG, D. CLEMENCE, C. JACKSON, Q. LIN, and V. BURBACH	191
