<i>List of Figures</i>	xxii
<i>List of Tables</i>	xxiii
1. Clusters, Networks, and Innovation: Research Results and New Directions <i>Stefano Breschi and Franco Malerba</i>	1
1.1 Clusters and Innovation: The Main Conceptual Traditions	1
1.2 The Main Themes: A Guide to This Volume	5
1.3 Some Broad Lessons and New Research Directions on Clusters, Networks, and Innovation	22
References	25
Part I	
2. Network models of innovation and knowledge diffusion <i>Robin Cowan</i>	29
Introduction	29
2.1 Knowledge Distribution	30
2.2 Behind the Current Interest in Networks	31
2.3 The Economics of Networks	34
2.4 Small Worlds and Innovation	37
2.5 Network Formation	43
2.6 Conclusions	48
Notes	49
References	50
3. On Sectoral Specificities in the Geography of Corporate Location <i>Giulio Bottazzi, Giovanni Dosi and Giorgio Fagiolo</i>	54
3.1 Introduction	54
3.2 The Interactions Between Geographical and Industrial Characteristics as Drivers of Agglomeration and Dispersion: The General Picture	55
3.3 The Model	58
3.4 Agglomeration Economies and Industrial Sectors: An Application to Italian Data	61
3.5 Conclusions	69
Acknowledgements	70
Notes	71

References	72
Appendices	74
4. Regional Knowledge Capabilities and Open Innovation: Regional Innovation Systems and Clusters in the Asymmetric Knowledge Economy	80
<i>Philip Cooke</i>	
4.1 Introduction	80
4.2 Lineaments of Regional Systems – Thinking about Innovation	81
4.3 The Conceptual System and the Real system	87
4.4 Regional knowledge Capabilities, Asymmetric Knowledge and Open Innovation: New Challenges for Regional Innovation Systems and Clusters	92
4.5 Problems with Public Regional Innovation Systems	99
4.6 Conclusions	103
Notes	104
References	106
Part II	
5. 'Old Economy' Inputs for 'New Economy' Outcomes: Cluster Formation in the New Silicon Valleys	
<i>Timothy Bresnahan, Alfonso Gambardella and AnnaLee Saxenian</i>	113
5.1 Introduction	113
5.2 Agglomeration Economies and External Effects	115
5.3 Starting a Cluster	117
5.4 No 'Recipes' but Some Deep Regularities	121
5.5 Co-operation vs. Competition among Clusters in the World Economy	127
5.6 Policy Issues and Conclusions	130
Acknowledgements	133
Notes	133
References	134
6. The Entrepreneurial Event Revisited: Firm Formation in a Regional Context	
<i>Maryann P. Feldman</i>	136
6.1 Introduction	136
6.2 Entrepreneurial Environments	138
6.3 Entrepreneurship Comes to Washington: An Interpretative History	142
6.4 Supportive Conditions Follow	156
6.5 Reflective Conclusions and Appreciative Theorizing	160
Acknowledgements	163

Notes	164
References	165
7. The Firms That Feed Industrial Districts: A Return to The Italian Source	
<i>Mark H. Lazerson and Gianni Lorenzoni</i>	169
7.1 Introduction	169
7.2 What is an Industrial District?	172
7.3 Origins of Industrial Districts	173
7.4 Small Firms	174
7.5 The Boundaries of the District	176
7.6 The Cultural Homogeneity of the District	179
7.7 Community and Co-operation	180
7.8 Local and Distant Networks	181
7.9 Confronting Crisis in an Industrial District: The Case of Prato	183
7.10 Governance Mechanisms	186
7.11 Discussion	189
Notes	191
References	192
8. Employee Start-Ups in High-Tech Industries	
<i>Steven Klepper</i>	199
8.1 Introduction	199
8.2 Theoretical Perspectives	200
8.3 The Evidence	211
8.4 Interpretations and Implications	218
8.5 Conclusion	227
Acknowledgements	228
Notes	228
References	229

Part III

9. The Silicon Valley–Hsinchu Connection: Technical Communities and Industrial Upgrading	
<i>AnnaLee Saxenian and Jinn-Yuh Hsu</i>	235
9.1 Introduction	235
9.2 Technical Communities and Industrial Decentralization	240
9.3 The Construction of a Taiwanese Technical Community in Silicon Valley	242
9.4 Institutionalizing the Silicon Valley–Hsinchu Connection	245
9.5 Cross-Regional Collaborations and Industrial Upgrading	250
9.6 Concluding Comments	254
Acknowledgement	256

Notes	256
References	257
Appendix. The Silicon Valley–Hsinchu Technical Community	259
10. The Institutional Embeddedness of High-Tech Regions: Relational Foundations of the Boston Biotechnology Community <i>Kelley Porter, Kjersten Bunker Whittington and Walter W. Powell</i>	261
10.1 Introduction	261
10.2 Tracing Technology Networks	263
10.3 Visualizations of the Networks	267
10.4 Comparisons Across Networks	283
10.5 Implications for High-Tech Regions	286
Notes	289
References	291
Appendix I: Abbreviations of Names in Network Images	294
11. Social Networks and the Persistence of Clusters: Evidence from the Computer Workstation Industry <i>Olav Sorenson</i>	297
11.1 Social Networks and Industrial Geography	299
11.2 Computer Workstation Manufacturers	304
11.3 Discussion	312
References	314
Part IV	
12. Buzz: Face-to-Face Contact and the Urban Economy <i>Michael Storper and Anthony J. Venables</i>	319
12.1 Face-to-Face Contact Remains Important	319
12.2 The Specific Properties of Face-to-Face Contact	321
12.3 Why People Engage in F2F contact: Two Models	326
12.4 F2F, Buzz, and the Co-ordination of Economic Activities	334
12.5 The Future of F2F Contact and Co-location	337
Acknowledgements	338
Notes	339
References	339
Appendix 12.1	341
Appendix 12.2	342
13. The Geography of Knowledge Spillovers: Conceptual Issues and Measurement Problems <i>Stefano Breschi, Francesco Lissoni and Fabio Montobbio</i>	343
13.1 Introduction	343
13.2 Knowledge Spillovers: Logical Shortcomings and Empirical Traps	344

13.3 Tacitness Reconsidered: How Knowledge may Flow, and yet not Spill Over	355
13.4 Direct Measurement of Knowledge Flows	360
13.5 Conclusions	366
Notes	367
References	371
14. Comparative Localization of Academic and Industrial Spillovers	
<i>James D. Adams</i>	379
14.1 Introduction	379
14.2 Review of the Localization Literature	380
14.3 Description of the Data	383
14.4 Descriptive Findings on Localization	389
14.5 Localized Learning and Innovation	395
14.6 Discussion and Conclusion	400
Acknowledgements	403
Notes	403
References	406

Part V

15. Towards a Knowledge-Based Theory of the Geographical Cluster	
<i>Peter Maskell</i>	411
15.1 Introduction	411
15.2 The Existence of the Cluster	413
15.3 The Horizontal Dimension of the Cluster	416
15.4 The Vertical Dimension of the Cluster	418
15.5 The Boundaries of the Cluster	420
15.6 Public Policy Options	421
15.7 Final Comments	423
Notes	424
References	426
16. Deconstructing Clusters: Chaotic Concept or Policy Panacea?	
<i>Ron Martin and Peter Sunley</i>	433
16.1 Introduction: Clusters and the Reassertion of Location	433
16.2 Why 'Clusters'?	435
16.3 A Chaotic Concept?	438
16.4 What Sort of Theory for What Sort of Cluster?	443
16.5 Selective Empirics and the Cluster-Creation Game	449
16.6 Cluster Policy: Hard Targets or Fashion Labels?	454
16.7 Conclusions: The Cluster Brand?	461
Acknowledgements	463
References	463

List of Figures

2.1	Transition from a locally ordered structure to a random graph, dependent on p	36
2.2	Cliquishness and path length as determined by network structure	37
3.1	Frequency distributions of MAX, MIN, RANGE and STANDARD DEVIATION Statistics	56
3.2	Number of business units vs. total number of BUs	65
3.3	Observed vs. theoretical frequencies of BUs in LSLM	67
4.1	Characterization of successful and potentially successful knowledge clusters	93
6.1	Value of venture capital investments in the region	156
6.2	Capitol-area venture capital as a percentage of US investments	157
9.1	The world market share of Taiwan's IT hardware products, 1997–1999	236
9.2	Yearly production value of Taiwan's IT hardware, 1981–1998	237
9.3	Patents per capita for Taiwan, the NICs and Israel	238
9.4	The structure of Taiwan's IC industry (no. of establishments)	241
9.5	Returnees to Taiwan from the US, 1970–1997	246
10.1	Boston contractual network, 1988	269
10.2	Boston contractual network, 1998	271
10.3	Founder affiliation network, 1983	273
10.4	Founder affiliation network, 1997	274
10.5	Founder affiliation network, only nodes with two or more links – 1978–2003	275
10.6	SAB affiliation network, 1984	277
10.7	SAB affiliation network, 1997	278
10.8	SAB affiliation network, only nodes with three or more links – 1978–2003	280
10.9	Boston patent co-inventor network, 1976–1998	282
10.10	Betweenness centrality distribution of the patent co-inventor network, 1976–1998	284
11.1	Distribution of workstation manufacturers in 1984	306
11.2	Distribution of workstation manufacturers in 1996	306
12.1	Equilibria in a game of information acquisition and sharing	328
16.1	Porter's 'competitive diamond' of local industrial clustering	436

List of Tables

3.1	The statistical classification of the considered sectors	62
3.2	'Predicted' agglomeration parameters	67
3.3	Tail probabilities for the chi-square test between $\psi_1(\gamma_1^*)$ and $\psi_m(\gamma_m^*)$	68
3.4	Tail probabilities for the chi-square test $\psi_1(\gamma_1^*)$ and $\psi_m(\gamma_1^*)$	68
4.2	Conditions for higher and lower regional innovation systems potential	96
6.1	Characteristics of entrepreneurial places	138
6.2	Origins of bioscience companies in the region	144
6.3	Origins of ICT companies in the region	148
6.4	Federal procurement increased in the Capitol region, 1983–1997 (real dollars in billions; 1982–1984 = 100)	152
6.5	Major US policy initiatives favoring science-based entrepreneurship	154
8.1	Predictions of the theories	208
11.1	Descriptive statistics for entry rate models	308
11.2	Negative binomial regression estimates of MSA entry rates	309
11.3	Descriptive statistics for exit rate models	311
11.4	Weibull estimates of firm exit rates	311
12.1	Face-to-face contact	322
12.2	Group formation: $\gamma = 0.8$	333
12.3	Modes of co-ordination (proximity requirement in italics)	336
14.1	Distribution of firms and R&D laboratories by industry	384
14.2	Size characteristics of the R&D laboratories (standard deviations in parentheses)	385
14.3	Localization of learning expenditures on industrial and academic research (in millions of 1987 \$) (standard deviations in parentheses)	390
14.4	Localization of federal R&D in closely affiliated universities (in millions of 1987 \$) (standard deviations in parentheses)	391
14.5	Distances between R&D laboratories and closely affiliated universities, by laboratory characteristics (number of observations in brackets)	392
14.6	Comparative distances between R&D laboratories and closely affiliated universities and firms (number of observations in brackets)	393

14.7	Correlations between localization of laboratory learning about academic research and channels of interaction with universities	394
14.8	Correlations between localization of laboratory learning about industrial research and channels of interaction with other firms	394
14.9	Localization of learning about academic research (asymptotic normal statistics in parentheses)	395
14.10	Localization of learning about industrial research (asymptotic normal statistics in parentheses)	396
14.11	Laboratory innovation and localized learning (asymptotic normal statistics in parentheses)	397
16.1	Clusters: the confusion of definitions	441
16.2	Varieties of cluster and the cluster measurement problem	450
16.3	Clusters have costs as well as benefits	459
