

PART I Assessment in paediatric exercise science

- 1.1 Interpreting exercise performance data in relation to body size 3
Joanne R. Welsman and Neil Armstrong
Introduction 3
Ratio scaling 3
Linear regression scaling (regression standards) 4
Allometric (log-linear) scaling and power function ratios 4
Dimensionality theory 6
Empirical findings 6
Scaling for body size differences in longitudinal data-sets 7
Summary 7
References 8
- 1.2 Anthropometry, physique, body composition and maturity 11
Albrecht L. Claessens, Gaston Beunen and Robert M. Malina
Introduction 11
Anthropometry in assessing size and proportional characteristics 11
Estimating physique by somatotyping 14
Body composition assessment: Methodological aspects and techniques 15
Field methods for estimating body composition 16
Assessing maturational status 17
Summary 20
References 21
- 1.3 Muscle strength 23
Cameron J. R. Blimkie and David Macauley
Introduction 23
Terminology 23
Skeletal muscle active states 25
Determinants of a strength assessment method 26
Strength assessment techniques 27
Interpretative considerations 34
Summary 35
References 35
- 1.4 Anaerobic performance 37
Neil Armstrong and Joanne R. Welsman
Introduction 37
Assessment of short-term power output 37
Summary 43
References 43
- 1.5 Pulmonary function 47
Patricia A. Nixon
Introduction 47

The assessment of pulmonary function at rest	47
The assessment of pulmonary function during exercise	49
Measurements of pulmonary gas exchange	51
Less common measurements	52
Interpretation of pulmonary exercise testing	53
Summary	53
References	53

1.6 Cardiovascular function 57

Gerald Barber

Introduction	57
Cardiovascular parameters	57
Assessment techniques at rest and during exercise	58
Interpretation of abnormal data	61
Summary	63
References	63

1.7 Aerobic fitness 65

Neil Armstrong and Joanne R. Welsman

Introduction	65
Maximal or peak oxygen uptake	65
Blood lactate	68
Summary	72
References	72

1.8 Physical activity 77

Maarike Harro and Chris Riddoch

Introduction	77
Dimensions of physical activity	77
Range of methods	77
Validity and reliability of methods	78
Desirable attributes of instruments	79
Methods	79
Summary	81
References	83

1.9 Effort perception 85

Roger Eston and Kevin L. Lamb

Introduction	85
Application and description of traditional RPE scales	85
Estimation and production of effort	86
The study of perceived exertion in children: a historical perspective	86
The development of child-specific rating scales	86
Validity of effort perception: problems with comparing values from estimation, production, continuous and intermittent procedures	88
Summary	90
References	90

PART II Developmental aspects of paediatric exercise science

- 2.1 Growth and maturation: do regular physical activity and training for sport have a significant influence? 95
Robert M. Malina
Introduction 95
Physical activity and training 95
Patterns of participation in physical activity and sport 96
Growth and maturation 96
Limitations 96
Stature and the adolescent growth spurt 97
Body mass and body composition 98
Biological maturation 101
Summary 104
References 104
- 2.2 Biomechanics of movement 107
James Watkins
Introduction 107
Forms of motion 107
Kinematics 107
Kinetics 109
Coordination and control of human movement 114
Development of coordination and control 115
Kinematics of coordination 116
Kinetics of coordination 117
Dynamical systems approach to development of coordination 120
Summary 121
References 121
- 2.3 Motor development 123
Helen C. Wright and David A. Sugden
Introduction 123
The new synthesis 125
Resources supporting change and motor development 128
Developmental coordination disorder 130
Summary 130
References 130
- 2.4 Strength and muscle growth 133
David A. Jones and Joan M. Round
Introduction 133
Embryological origins of muscle and early development 133
Muscle fibre growth 134
Size and strength 135
Measurement of force 136
Growth studies and the measurement of strength 136
Determinants of strength during development 137
Muscle growth, strength and performance 140
Summary 141
References 141
- 2.5 Anaerobic performance 143
Anthony J. Sargeant
Introduction 143
Maximum short-term athletic performance during growth 143
Determinants of short-duration power output from muscle and performance 144

Summary 150
References 150

2.6 Pulmonary function 153

Thomas W. Rowland

Introduction 153

Ventilation at rest 153

Ventilation during submaximal exercise 154

Ventilation at maximal exercise 154

Respiratory patterns during exercise 156

Hyperventilation in children 156

Lung diffusion capacity during exercise 157

Submaximal ventilatory kinetics 158

Sustained exercise 158

Adaptations to physical training 158

Summary 159

References 159

2.7 Cardiovascular function 163

Thomas W. Rowland

Introduction 163

The two-pump system 163

The heart at rest 164

Cardiac responses to exercise 165

Systemic blood pressure and peripheral vascular resistance 169

Prolonged exercise 169

Summary 169

References 169

2.8 Aerobic fitness 173

Neil Armstrong and Joanne R. Welsman

Introduction 173

Components of peak oxygen uptake 173

Peak oxygen uptake and age 174

Peak oxygen uptake, growth and maturation 175

Peak oxygen uptake and sex 178

Summary 179

References 179

2.9 Economy of locomotion 183

Don W. Morgan

Introduction 183

Economy differences among children, adolescents
and adults 183

Variability in economy 184

Sex differences in running economy 185

Influence of running instruction and run training on
economy 186

Relationship between running economy and running
performance 186

Physical growth and changes in locomotion economy 187

Do children choose walking speeds that minimize energy
demands? 187

Economy of locomotion in children with physical
disabilities 187

Summary and future directions 187

Acknowledgement 188

References 188

2.10 Kinetics of pulmonary oxygen uptake 191

J. Alberto Nader and Brian J. Whipp

Introduction 191

Fundamentals of pulmonary gas exchange dynamics 191

Oxygen uptake kinetics in children 194

Summary 198

References 198

2.11 Exercise training 201

Anthony D. Mahon

Introduction 201

Aerobic adaptations 201

Anaerobic adaptations 211

Muscle strength adaptations 212

Summary 218

References 219

2.12 Temperature regulation 223

Bareket Falk

Introduction 223

Physical and physiological changes which occur during growth and maturation and are related to thermoregulation 223

Physical changes 223

Physiological changes 224

Physiological response to thermal stress 227

Adaptation to thermal stress 234

Summary 236

References 236

PART III Physical activity, physical fitness and health

3.1 Physical activity, physical fitness and children's health: current concepts 243

Chris Riddoch and Colin Boreham

Introduction 243

Physical activity and physical fitness 244

Activity and health in adults 244

Activity and health in children 245

Fitness and health in children 248

Summary 249

References 249

3.2 Physical activity, physical fitness and cardiovascular health 253

Jos W. R. Twisk

Introduction 253

Traditional CVD risk factors 253

New CHD risk factors 257

New developments 258

General comments 259

Summary 261

References 261

3.3 Physical activity, physical fitness and bone health 265

Han C. G. Kemper

Introduction 265

Growth of bone 265

Methods of measurement of bone mass 266

Mechanisms of bone formation 266

Natural course of bone mass development 267

Effects of physical activity and physical fitness on bone mass 269

Summary 271

References 271

3.4 Physical activity, physical fitness and social, psychological and emotional health 273

Susan R. Tortolero, Wendell C. Taylor and Nancy G. Murray

Introduction 273

Self perceptions 273

Psychosocial and academic functioning 274

Psychosocial symptoms and negative effect 278

Risk behaviours 281

Summary and future directions 286

Acknowledgements 291

References 291

3.5 Sport, physical activity and other health behaviours in children and adolescents 295

Stewart G. Trost, Sarah Levin and Russell R. Pate

Introduction 295

Method 295

Cigarette smoking 295

Smokeless tobacco 297

Alcohol use 298

Illegal drugs 299

Anabolic steroids 299

Dietary practices 300

Weight control practices 301

Sexual activity 302

Violence 302

Summary 302

References 303

3.6 Health education and the promotion of physical activity 305

Herman Schaalma, Ree Meertens, Willem van Mechelen and Gerjo Kok

Introduction 305

Health education and health promotion: concepts 305

Evidence-based health education 305

Health promotion and physical activity 306

Summary 309

Acknowledgement 309

References 309

PART IV Chronic health conditions and physical activity

4.1 Exercise testing and daily physical activity in children with congenital heart disease 313

Tony Reybrouck and Marc Gewillig

Introduction 313

Review of commonly used parameters to assess aerobic exercise function in the paediatric age group 313

Assessment of the habitual level of physical activity in patients with congenital heart disease 315

Cardiorespiratory response to exercise in specific congenital heart defects 315

Natural evolution of aerobic exercise performance and daily level of physical activity in patients with congenital heart disease 317

Exercise recommendations and rehabilitation of patients with congenital heart disease 319

Summary 319

References 319

- 4.2 Exercise and physical activity in the child with asthma 323
Helge Hebestreit
Introduction 323
Exercise induced asthma 323
Pathophysiology of exercise-induced bronchoconstriction 323
Late response 324
Refractory period 324
Diagnosing EIA 324
Physical activity and exercise capacity of children and adolescents with asthma or EIA 324
Exercise related benefits to children with asthma 324
Exercise testing in children with asthma or suspected EIA 325
Prevention of EIA and exercise counselling 327
Summary 328
References 328
- 4.3 Exercise capacity and daily physical activity in children with cystic fibrosis 331
Susi Kriemler
Cystic fibrosis and decreased exercise performance 331
Beneficial effects of exercise and physical activity 334
Harmful effects of exercise and physical activity 335
Exercise testing 335
Exercise recommendations 336
References 336
- 4.4 Exercise, daily physical activity, eating and weight disorders in children 339
Andrew P. Hills and Nuala M. Byrne
Introduction 339
The central problem: fear of fatness? 339
The 'eating and weight disorders' 339
Contrasting scenarios: over-nutrition and physical inactivity, under-nutrition and excessive physical activity 340
Obesity 340
Body satisfaction during the growing years: implications for eating and weight disorders 342
The influence of body composition on disordered eating tendencies of adolescents 343
Exercise motivations of adolescents 344
Anorexia nervosa, bulimia nervosa and binge eating disorder 344
References 346
- 4.5 Exercise capacity, physical activity, cerebral palsy and other neuromuscular diseases 351
Jost Schnyder, Susan Rochat-Griffith and Carlos Rodriguez
Introduction 351
Cerebral palsy 351
Neuromuscular dystrophy (Duchenne, Becker) and myopathy 353
Spinal cord impairments (SCI) and traumatic brain injuries (TBI) 354
Fitness assessment in NMD 355
What kind of physical activity is suitable for young patients with NMD? 355
Evaluation 358
Summary 360
References 360

4.6 Exercise, sport and diabetes mellitus 363

Keith D. Buchanan

What is diabetes mellitus? 363

Classification of diabetes mellitus 363

The aetiology of Type 1 diabetes mellitus 363

The incidence of Type 1 diabetes mellitus 363

The clinical spectrum of Type 1 diabetes mellitus 363

The management of Type 1 diabetes mellitus 363

Hypoglycaemia 364

Exercise 365

Philosophy of involvement of diabetics in sport 365

The effect of exercise in diabetes 365

Practical considerations for the exercising diabetic 366

References 367

4.7 Young athletes with a physical or mental disability 369

Merrilee Zetaruk

Introduction 369

Athletes with sensory impairments 369

Wheelchair athletes 370

Athletes with mental retardation 374

Summary 377

References 377

PART V Sports and exercise injuries

5.1 Current concepts on the aetiology and prevention of sports injuries 381

Willem van Mechelen

Introduction 381

The sequence of prevention 381

Sports injury incidence 381

Research design 382

The severity of sports injuries 382

Conceptual models for the aetiology and prevention of sports injuries 383

Summary 384

References 384

5.2 Aetiology and prevention of injuries in physical education classes 385

Frank J. G. Backx

Introduction 385

Incidence rates 385

Risk of injury 385

Location of injury 386

Type of injury 386

Severity of injuries 387

Aetiology 388

Prevention 388

References 389

5.3 Aetiology and prevention of injuries in youth competition: contact sports 391

Evert A. L. M. Verhagen, Willem van Mechelen, Adam D. G. Baxter-Jones and Nicola Maffulli

Introduction 391

American football 391

Boxing 392

Soccer 394

Martial arts	395
Ice hockey	396
Basketball	397
Wrestling	398
References	399

5.4 Aetiology and prevention of injuries in youth competition:
non-contact sports 405

Per Mahler

Introduction	405
Bicycling	405
Dance	406
Gymnastics	407
Running	407
Skiing and snowboarding	408
Swimming	409
Tennis and badminton	410
Volleyball	411
Summary	412
Acknowledgements	412
References	412

5.5 Upper extremity and trunk injuries 417

Mininder S. Kocher and Lyle J. Micheli

Introduction	417
Upper extremity injuries	417
Shoulder injuries	417
Elbow injuries	421
Wrist and hand injuries	425
Trunk injuries	428
Spondylolysis and Spondylolisthesis	429

- Discogenic disorders 430
- Scoliosis 431
- Scheuermann's disease 432
- Fractures 432
- Mechanical back pain 433
- References 433

5.6 Lower limb injuries in sporting children 437

Wolfgang Bruns, Adam D. G. Baxter-Jones and Nicola Maffulli

- Introduction 437
- The musculoskeletal system in childhood 437
- Different metabolic and psychological aspects of childhood sport 437
- Endogenous risk factors 437
- Epidemiology of lower limb injuries 437
- Ligament, muscle and tendon injuries 438
- Joint injuries 439
- Bone injuries 440
- Summary 443
- References 445

5.7 Injuries to the head and cervical spine 449

Robert C. Cantu

- Introduction 449
- Types of head injury 449
- Types of spine injuries 454
- Summary 455
- References 456

Index 457
