|------------------------------------------------------------------------------|----------------|
| <i>Preface</i>                                                               | <i>page</i> xi |
| <i>Acknowledgements</i>                                                      | xii            |
| <br>                                                                         |                |
| 1      Introduction                                                          | 1              |
| 1.1 Introduction                                                             | 1              |
| 1.2 Background of multilevel analysis                                        | 2              |
| 1.3 General approach                                                         | 3              |
| 1.4 Prior knowledge                                                          | 4              |
| 1.5 Example datasets                                                         | 4              |
| 1.6 Software                                                                 | 5              |
| <br>                                                                         |                |
| 2      Basic principles of multilevel analysis                               | 6              |
| 2.1 Introduction                                                             | 6              |
| 2.2 Example                                                                  | 10             |
| 2.3 Intraclass correlation coefficient                                       | 14             |
| 2.4 Random slopes                                                            | 16             |
| 2.5 Example                                                                  | 18             |
| 2.6 Multilevel analysis with more than two levels                            | 22             |
| 2.6.1 Example                                                                | 22             |
| 2.7 Assumptions in multilevel analysis                                       | 26             |
| 2.8 Comments                                                                 | 27             |
| 2.8.1 Which regression coefficients can be assumed to be random?             | 27             |
| 2.8.2 Random regression coefficients versus fixed regression<br>coefficients | 28             |
| 2.8.3 Maximum likelihood versus restricted maximum likelihood                | 29             |
| <br>                                                                         |                |
| 3      What do we gain by applying multilevel analysis?                      | 30             |
| 3.1 Introduction                                                             | 30             |
| 3.2 Example with a balanced dataset                                          | 30             |

|       |                                                                    |     |
|-------|--------------------------------------------------------------------|-----|
| 3.3   | Example with an unbalanced dataset                                 | 34  |
| 3.4   | Cluster randomisation                                              | 35  |
| 3.5   | Conclusion                                                         | 37  |
| 4     | Multilevel analysis with different outcome variables               | 38  |
| 4.1   | Introduction                                                       | 38  |
| 4.2   | Logistic multilevel analysis                                       | 38  |
| 4.2.1 | Intraclass correlation coefficient in logistic multilevel analysis | 46  |
| 4.3   | Multinomial logistic multilevel analysis                           | 47  |
| 4.4   | Poisson multilevel analysis                                        | 52  |
| 4.5   | Multilevel survival analysis                                       | 57  |
| 5     | Multilevel modelling                                               | 62  |
| 5.1   | Introduction                                                       | 62  |
| 5.2   | Multivariable multilevel analysis                                  | 62  |
