## **PART I    BIOLOGICAL CONSIDERATIONS**

---

<b>CHAPTER 1</b>	<b>ACUTE PHYSIOLOGICAL RESPONSES TO DYNAMIC EXERCISE</b>	<b>3</b>
	<i>Roger A. Fielding, PhD, and Jonathan Bean, MD, MS</i>	
	Cardiorespiratory Response to Dynamic Exercise 3 • Metabolic Response During Dynamic Exercise 7 • Acute Exercise Response in Diabetes Mellitus 9 • Cardiorespiratory Changes With Activity and Inactivity 11 • Physiological Adjustments to Isometric Exercise 12	
<b>CHAPTER 2</b>	<b>ADAPTATIONS TO ENDURANCE EXERCISE TRAINING</b>	<b>13</b>
	<i>Martin D. Hoffman, MD</i>	
	Physiological Adaptations to Endurance Exercise Training 13 • Psychological Adaptations to Endurance Exercise Training 20 • Factors Affecting Adaptations to Endurance Exercise Training 20 • Simultaneous Strength and Endurance Exercise Training 23	
<b>CHAPTER 3</b>	<b>ADAPTATIONS TO STRENGTH TRAINING</b>	<b>24</b>
	<i>Bette Ann Harris, DPT, MS; and Mary P. Watkins, DPT, MS</i>	
	Anatomical and Physiological Considerations 25 • Functional Biomechanics 26 • Factors Influencing Muscle Strength 27 • Principles of Strength Training 28 • Adaptations to Strength Conditioning 30	
<b>CHAPTER 4</b>	<b>TRAINING FLEXIBILITY</b>	<b>33</b>
	<i>Lisa S. Krivickas, MD</i>	
	Definition of Flexibility 33 • Factors Influencing Flexibility 33 • Response of Muscle to Stretch 37 • Relationship Between Muscle Stiffness and Flexibility 38 • Measuring and Quantifying Muscle Flexibility and Ligamentous Laxity 39 • Relationship Between Muscle Flexibility and Injury 41 • Relationship Between Ligamentous Laxity and Injury 44 • Effect of Stretching on Delayed Onset Muscle Soreness 44 • Effect of Disease Processes on Flexibility 45 • Relationship Between Flexibility and Athletic Performance 45 • Flexibility and Activities of Daily Living in the Elderly or Disabled 46 • Stretching Techniques and Prescription of a Flexibility Training Program 46 • Effect of Strength Training on Flexibility 48	

## **PART II    SPECIAL CLINICAL CONSIDERATIONS**

---

<b>CHAPTER 5</b>	<b>TESTING EXERCISE CAPACITY: CARDIOPULMONARY/ NEUROMUSCULAR MODELS</b>	<b>53</b>
	<i>James C. Agre, MD, PhD</i>	
	Rationale for Health Screening and Risk Stratification 54 • Rationale for Exercise Testing 55 • Protocols for Exercise Testing, With Examples 62	
<b>CHAPTER 6</b>	<b>A BEHAVIORAL APPROACH TO PRESCRIBING PHYSICAL ACTIVITY FOR HEALTH AND FITNESS</b>	<b>73</b>
	<i>Gregory W. Heath, DHSc, MPH</i>	
	Preliminary Factors Important for Exercise Prescription 73 • General Exercise Prescription Guidelines 78 • Theories and Models Used in Physical Activity Promotion 78	

<b>CHAPTER 7</b>	<b>EXERCISE AND THE PREVENTION OF CHRONIC DISABLING ILLNESS</b>	<b>93</b>
	<i>Carlos J. Crespo, DrPH, MS, FACSM; and Edith M. Williams, MS</i>	
	Definitions 93 • Physical Activity and Fitness 94 • Physical Activity and Health 94 • Physical Activity and Prevention of Heart Disease 95 • Exercise and Prevention of Type 2 Diabetes 101 • Exercise and Primary Prevention of Cancer 103 • Physical Activity and the Prevention of Osteoporosis and Falls 108 • Exercise in the Prevention of Arthritis 109 • Exercise in the Prevention of Low Back Pain 110 • Physical Activity and Primary Prevention of Obesity 110 • Physical Activity and Psychological Well-Being 112	
<b>PART III EXERCISE IN THE REHABILITATION OF SPECIFIC DISEASES AND CONDITIONS</b>		
<b>CHAPTER 8</b>	<b>HEART DISEASES</b>	<b>117</b>
	<i>Ruy S. Moraes, MD, ScD; and Jorge P. Ribeiro, MD, ScD</i>	
	Responses and Adaptations of Cardiac Patients to Exercise 117 • Effect of Cardiovascular Drugs on Exercise Responses and Adaptations 120 • Evaluation of Cardiac Patients 120 • Indications for Cardiac Rehabilitation 121 • Contraindications for Cardiac Rehabilitation 122 • Exercise Prescription for the Cardiac Patient 122 • Outcomes of Cardiac Rehabilitation Programs 127	
<b>CHAPTER 9</b>	<b>RESPIRATORY DISEASE</b>	<b>130</b>
	<i>Bartolome R. Celli, MD</i>	
	Physical Reconditioning 131 • Respiratory Muscles and Breathing Training 138	
<b>CHAPTER 10</b>	<b>DIABETES MELLITUS</b>	<b>144</b>
	<i>Edward S. Horton, MD</i>	
	What Is Diabetes? 145 • Exercise in Type 1 Diabetes 147 • Exercise in Type 2 Diabetes 154	
<b>CHAPTER 11</b>	<b>MAJOR INFLAMMATORY AND NON-INFLAMMATORY ARTHRITIDES</b>	<b>157</b>
	<i>Maura Daly Iversen, DPT, SD, MPH; Matthew H. Liang, MD, MPH; and Axel Finckh, MD, MS</i>	
	Rheumatoid Arthritis 159 • Osteoarthritis 168 • Spondylarthropathies 174 • Systemic Lupus Erythematosus 175 • Polymyositis/Dermatomyositis 176 • Systemic Sclerosis 177 • Improving Patient Adherence 177	
<b>CHAPTER 12</b>	<b>NEUROMUSCULAR DISEASES</b>	<b>180</b>
	<i>David D. Kilmer, MD; and Susan Aitkens, MS</i>	
	Physiologic and Functional Consequences of Neuromuscular Diseases 181 • Causes of Reduced Neuromuscular Function in NMD 183 • Effects of Resistance (Strengthening) Exercise in NMD 185 • Effects of Aerobic (Endurance) Exercise in NMD 188 • Exercise Recommendations in Neuromuscular Disorders 189	
<b>CHAPTER 13</b>	<b>SPINAL CORD INJURY</b>	<b>191</b>
	<i>Mark S. Nash, PhD, FACSM</i>	
	Health Consequences of Spinal Cord Injury 192 • Exercise for Persons With Spinal Cord Injury 195 • Restoration of Function Following Long-Standing Paralysis 202 • Exercise Risks for Persons With Spinal Cord Injury 202 • Medications That May Influence Exercise Performance After Spinal Cord Injury 204	
<b>CHAPTER 14</b>	<b>STROKE</b>	<b>206</b>
	<i>Joel Stein, MD</i>	
	Scope of the Problem 206 • Effects of Stroke on Neuromuscular Function 208 • Mechanisms of Motor Recovery Poststroke 209 • Exercise for Motor Control 211 • Strengthening Exercises 218 • Exercise for Ataxia 218 • Exercise for Aerobic Conditioning 219 • Other Benefits of Exercise 219 • Home- and Community-Based Exercise 220	

<b>CHAPTER 15</b>	<b>OSTEOPOROSIS</b>	<b>221</b>
	<i>David M. Slovik, MD</i>	
	Mechanical Properties of Bone: Effects of Exercise 222 • Disuse, Weightlessness, and Immobilization 222 • Physical Activity and Bone Mass 223 • Physical Activity, Fall Prevention, and Fractures 247	
<b>CHAPTER 16</b>	<b>HUMAN IMMUNODEFICIENCY VIRUS</b>	<b>249</b>
	<i>Susan D. Driscoll, MPH, MSN, ANP; and Steven Grinspoon, MD</i>	
	The HIV Pandemic 250 • Exercise to Improve Physical Function in HIV-Infected Patients 250 • Exercise to Improve Psychosocial and Quality of Life Issues in HIV 262 • Exercise Effects on Immune Status and Lactic Acid 263	
<b>CHAPTER 17</b>	<b>OBESITY</b>	<b>265</b>
	<i>Ronenn Roubenoff, MD, MHS</i>	
	Health Implications of Obesity 266 • Body Composition Through the Life Cycle 266 • Etiology of Obesity 267 • Exercise for Treatment of Obesity 273 • Effect of Exercise on Serum Lipoproteins and Glucose Metabolism 274	
<b>CHAPTER 18</b>	<b>CANCER</b>	<b>277</b>
	<i>Kerry S. Courneya, PhD; Lee W. Jones, PhD; and John R. Mackey, MD</i>	
	What is Cancer? 277 • Epidemiology of Cancer 277 • Medical Treatments for Cancer 278 • Exercise in Cancer Survivors 279 • Exercise Testing and Prescription Guidelines for Cancer Survivors 284 • Exercise Motivation in Cancer Survivors 289 • Future Research Directions 289	
<b>CHAPTER 19</b>	<b>END-STAGE RENAL DISEASE</b>	<b>291</b>
	<i>Pelagia Koufaki, PhD; and Tom Mercer, PhD</i>	
	What is End-Stage Renal Disease? 292 • Renal Replacement Therapy 292 • Renal Transplantation 293 • Scale and Nature of the Problem 294 • Pathophysiology and Physical Dysfunction in End-Stage Renal Disease 295 • Exercise Rehabilitation Aims 296 • Feasibility and Safety of Exercise Rehabilitation Options in End-Stage Renal Disease 297 • Exercise Prescription in End-Stage Renal Disease 299 • Effectiveness of Exercise Rehabilitation in End-Stage Renal Disease 300	
<b>PART IV SPECIFIC PATIENT POPULATIONS</b>		
<b>CHAPTER 20</b>	<b>AGING, FUNCTION, AND EXERCISE</b>	<b>311</b>
	<i>Jonathan F. Bean, MD, MS; and Charles T. Pu, MD</i>	
	The International Demographics of Aging 311 • A Functional Perspective 312 • Effects of Exercise on Physiologic Aging 317 • Effects of Exercise on Function and Disability 319 • Practical Recommendations 329	
<b>CHAPTER 21</b>	<b>ELITE ATHLETES WITH IMPAIRMENTS</b>	<b>332</b>
	<i>Rory A. Cooper, PhD; Michael L. Boninger, MD; Ian Rice, MS, OTR/L; Sean D. Shimada, PhD; and Rosemarie Cooper, MPT, ATP</i>	
	From Patient to Athlete 332 • Organizational Structure of Sports for People With Disabilities 333 • Sports Equipment Technology and Use 335 • Classification 345 • Exercise Science and the Athlete With Impairments 346 • Training Techniques for Elite Athletes With Disabilities 348 • Injuries Experienced by Athletes With Disabilities 351
