Part I Generic Framework

1	Definitions and Notation	3
1.1	System-Related Definitions	3
1.2	Open-Loop-Control-Related Definitions	10
1.3	Open-Loop-Trajectories-Related Definitions	16
1.4	Further Notation	17
2	The Receding-Horizon State Feedback	19
2.1	The Strategy Most Commonly Used by Humans	19
2.2	The Ingredients of a Receding-Horizon Control Scheme	20
2.3	The Receding-Horizon State Feedback	23
2.4	Existence of Solutions	25
2.5	The Stability Issue	28
2.5.1	An Illustrative Example	29
3	Stabilizing Schemes with Final Equality Constraint on the State	35
3.1	Some Assumptions and Preliminary Results	35
3.2	Prediction Horizon Formulations with Final Equality Constraint on the State	44
3.2.1	Dropping the State Weighting in the Cost Function	55
3.2.2	Particular Case: Linear Systems with Non Quadratic Cost	56
4	Stabilizing Formulations with Free Prediction Horizon and No Final Constraint on the State	61
4.1	Preliminary Results	61
4.1.1	Generic Nature of the Contraction Property	65
4.2	A Contractive Free Prediction Horizon Formulation for Use in a Hybrid Scheme	68

4.3	A Contractive Self-Contained Free Final-Horizon Formulation .	76
4.3.1	Definitions, Notation and Technical Assumptions	76
4.4	Generalization	84
5	General Stabilizing Formulations for Trivial Parametrization	87
5.1	Introduction	87
5.2	Definitions and Notation	88
5.3	Sufficient Conditions for Asymptotic Stability	91
5.4	A Quick Survey of Existing Stabilizing Formulations	94
5.4.1	Formulations with Final Constraint on the State	95
5.4.2	Formulations with a Terminal Set and a Final Penalty on the State	95
5.4.3	Formulations with Terminal Cost and Terminal Set	96
5.4.4	Formulations with Free Prediction Horizon	96
5.5	Inverse Optimality	98
5.6	Current Issues: Distributing the Optimization over Real Time .	100
5.6.1	Informal Proof	102
6	Limit Cycles Stabilizing Receding-Horizon Formulation for a Class of Hybrid Nonlinear Systems	105
6.1	Problem Statement	106
6.2	Recall on Partial Feedback Linearization	110
6.3	The Proposed Receding-Horizon Feedback Scheme	113
6.3.1	Some Variants and Design Considerations	119
6.4	Illustrative Examples	122
6.4.1	Example 1: The Ball and Beam	122
6.4.2	Example 2: The Modified Impulsive Lorentz System	128
6.5	Conclusion	131
7	Generic Design of Dynamic State Feedback Using Receding-Horizon Schemes	133
7.1	Intuitive Presentation of the Main Idea	134
7.1.1	Solving the <i>Frozen</i> Final State Equality Constraint Problem	136
7.1.2	Solving the Final Equality Constraint in Real Time	141
7.2	Rigorous Statement of the Dynamic State Feedback	145
7.3	Conclusion	150

Part II Application Examples

Introduction to Part II	153
8 Swing-Up Mechanical Systems	155
8.1 Swing-Up and Stabilization of a Twin-Pendulum System	155
8.1.1 System Modelling	156
8.1.2 Intuitive Presentation of the Feedback Design	159
8.1.3 Explicit Formulation of the Receding-Horizon Feedback	162
8.1.4 Simulations	166
8.2 Swing-Up and Stabilization of a Reaction-Wheel Pendulum Under Constraints	169
8.2.1 Description of the System	170
8.2.2 Problem Formulation	171
8.2.3 Reduced-Order Model	171
8.2.4 The Basic Idea	172
8.2.5 Rigorous Formulation of the Receding-Horizon Feedback: Solving Problem 1	174
8.2.6 Taking into Account the Control Saturation: Solving Problem 2	177
8.2.7 Taking into Account the Control and the State Constraints: Solving Problem 3	180
8.3 Swing-Up and Stabilization of an Inverted Pendulum on a Cart	181
8.4 Swing-Up and Stabilization of a Double Inverted Pendulum on a Cart	187
8.4.1 System Description	187
8.4.2 State Feedback Formulation	188
8.4.3 Simulation Results	191
8.5 Conclusion	193
9 Minimum-Time Constrained Stabilization of Nonholonomic Systems	197
9.1 Stabilisation of Nonholonomic Systems in Chained Form	197
9.1.1 Definition of the Open-Loop-Optimal-Control Problem	199
9.1.2 Feedback Definition and Stability Results	205
9.1.3 Illustrative Examples	208
9.2 Stabilisation of a Class of Nonholonomic Systems: Application to the Snakeboard Example	210
9.2.1 System Definition	211
9.2.2 Definition of the Stabilizing State Feedback	214
9.2.3 Application to the Constrained Stabilization of a Snakeboard	219
9.2.4 Simulation Results	224

10 Stabilization of a Rigid Satellite in Failure Mode	229
10.1 The Model of a Satellite in Failure Mode	230
10.2 Designing Efficiently Computable Steering Trajectories	231
10.2.1 Problem Transformation	231
10.2.2 Implementation Issues	235
10.3 Numerical Experiments	237
10.4 State Feedback Definition	238
10.5 Closed-Loop Simulations	241
10.6 Conclusion	242
11 Receding-Horizon Solution to the Minimum-Interception-Time Problem	247
11.1 System Modelling and Problem Statement	249
11.2 Intuitive Presentation of the Controller Design	251
11.3 Explicit Definition of the Feedback Law	253
11.3.1 Procedure P_1 : Classical Solution	257
11.3.2 Procedure P_2 : Real-Time Optimization	257
11.3.3 The Two Explicit Feedback Laws	258
11.4 Simulation Results	260
11.4.1 Results with Feedback 1	261
11.4.2 Results with Feedback 2	263
11.4.3 The Computation Times	265
11.5 Conclusion	268
12 Constrained Stabilization of a PVTOL Aircraft	269
12.1 The Model of the PVTOL Aircraft	270
12.2 Generation of Admissible Open-Loop Steering Trajectories	271
12.2.1 Derivation of the Computation Principle	271
12.2.2 Simulation Examples on the Generation of Admissible Steering Trajectories	275
12.2.3 Estimation of the Computation Time	276
12.3 Definition of the Receding-Horizon Feedback	277
12.4 Simulations	278
12.5 Conclusion	279
13 Limit Cycle Stabilizing Receding-Horizon Controller for the Planar Biped RABBIT	283
13.1 The Planar Biped RABBIT	284
13.1.1 The Expression of the External Contact Forces	286
13.1.2 The Impact-Related Jump Map	287
13.1.3 The Legs Roles-Exchange Jump Map	288
13.2 The Limit Cycle Stabilizing Receding-Horizon Controller	289
13.2.1 Definition of the State Decomposition	289
13.2.2 The Definition of the Target State $(\xi^f, \eta^f) = \Psi(x^f)$	290
13.2.3 Definition of the Parametrized Trajectories on ξ	292

13.3 Simulation Results.....	293
13.3.1 Reaching a Stable Desired Mean Velocity from the Rest	294
13.3.2 Transitions Between Several Desired Mean Velocities...	295
13.3.3 Robustness Against Modelling Errors	295
13.3.4 Robustness Against Ground Irregularities	296
13.4 Conclusion	297
