

Table of Contents

Foreword	ix
Preface	xi

Part I. The Basics

1. Introduction	3
VBScript's History and Uses	4
What VBScript Is Used For: Gluing Together Objects	5
Differences Between VBScript and VBA	9
2. Program Structure	11
Functions and Procedures	11
Classes	23
Global Code	27
Reusable Code Libraries	32
3. Data Types and Variables	38
VBScript Data Types: The Many Faces of the Variant	38
Variables and Constants	46
4. Error Handling and Debugging	67
Debugging	69
Error Handling	83
Common Problem Areas and How to Avoid Them	89

5. VBScript with Active Server Pages	91
How ASP Works	92
Active Server Pages Object Model	95
6. Programming Outlook Forms	102
Why Program Outlook Forms?	102
The Form-Based Development Environment	103
Running Your Code	107
Program Flow	113
The Outlook Object Model	114
Accessing Other Object Models	123
7. Windows Script Host 5.6	125
Why Use WSH?	125
Running WSH Scripts	126
Program Flow	127
The WSH Object Model	130
WSH Language Elements	150
Accessing Other Object Models	151
8. VBScript with Internet Explorer	154
The <SCRIPT> Tag	154
What Can You Do with Client-Side Scripting?	159
Understanding the IE Object Model	166
9. Windows Script Components	178
The Script Component Wizard	178
Writing Component Code	187
Using the Component	188
WSC Programming Topics	189

Part II. Reference

10. The Language Reference	201
---	------------

Part III. Appendixes

A. Language Elements by Category	435
B. VBScript Constants	445
C. Operators	451
D. Locale IDs	458
E. The Script Encoder	462
Index	471
