<i>List of contributors</i>	<i>page</i>	vii
<i>Preface</i>		ix
Part I Two perspectives		1
1 The Mirror System Hypothesis on the linkage of action and languages Michael A. Arbib		3
2 The origin and evolution of language: a plausible, strong-AI account Jerry R. Hobbs		48
Part II Brain, evolution, and comparative analysis		89
3 Cognition, imitation, and culture in the great apes Craig B. Stanford		91
4 The signer as an embodied mirror neuron system: neural mechanisms underlying sign language and action Karen Emmorey		110
5 Neural homologies and the grounding of neurolinguistics Michael A. Arbib and Mihail Bota		136
Part III Dynamic systems in action and language		175
6 Dynamic systems: brain, body, and imitation Stefan Schaal		177
7 The role of vocal tract gestural action units in understanding the evolution of phonology Louis Goldstein, Dani Byrd, and Elliot Saltzman		215
8 Lending a helping hand to hearing: another motor theory of speech perception Jeremy I. Skipper, Howard C. Nusbaum, and Steven L. Small		250
Part IV From mirror system to syntax and Theory of Mind		287
9 Attention and the minimal subscene Laurent Itti and Michael A. Arbib		289

10	Action verbs, argument structure constructions, and the mirror neuron system David Kemmerer	347
11	Language evidence for changes in a Theory of Mind Andrew S. Gordon	374
Part V	Development of action and language	395
12	The development of grasping and the mirror system Erhan Oztop, Michael A. Arbib, and Nina Bradley	397
13	Development of goal-directed imitation, object manipulation, and language in humans and robots Ioana D. Goga and Aude Billard	424
14	Assisted imitation: affordances, effectivities, and the mirror system in early language development Patricia Zukow-Goldring	469
15	Implications of mirror neurons for the ontogeny and phylogeny of cultural processes: the examples of tools and language Patricia Greenfield	501
