Abbreviations	iv
List of Figures	v
Acknowledgments	vi
1. Introduction	1
- Research Focus and Questions	1
- Theoretical Approaches and the Argument	
- The Environment: A Brief Overview of the Evolution of Computer Technology	9
- Methodology	13
- Organization and Outline of the Study	15
2. Theoretical Issues in Standardization	18
2.1. Introduction	18
2.2. The Dominant Design Theory	19
2.3. Insights from the Economic Theory of Standardization	21
2.3.1. Definitions	21
2.3.2. The Most Salient Characteristics of Network Technologies: Network Effects, "Tipping," and Lock-In	22
2.3.3. Further Characteristics of Networks	27
2.3.4. Dueling Sponsors	28
2.3.5. The Compatibility Decision	30
2.4. Shortcomings and Contradictions in the Economic Theory of Standardization	32
2.4.1. Shortcomings Revealed from the Comparison between Theory and Empirical Research	33
2.4.2. Potential Pitfalls from LAN Market Idiosyncrasies	36
2.5. Conclusion	38
3. Technological Communities and the Power of Open Standards	40
3.1. Introduction	40
3.2. The Capability Approach	41
3.2.1. Internal Capabilities	41
3.2.2. External Capabilities	44
3.3. The Technological Community	46
3.3.1. Definition	46
3.3.2. The Three Types of Community	48

3.4.	The Comparison of the Economic Power of the Three Types of Community	53
3.4.1.	The Comparison of Equal Types of Community	54
3.4.2.	The Comparison of Different Types of Community: The Power of Open Communities	56
3.4.3.	Some Qualifications to the Power of Open Communities	62
3.5.	Conclusion	64
4.	The Beginning of Networking and the Invention of Token Ring and Ethernet	66
4.1.	Introduction	66
4.2.	Network Technologies Preceding LANs	68
4.3.	The Invention and Evolution of Token Ring	76
4.3.1.	The Invention of Token Ring	77
4.3.2.	Token Ring's Further Evolution	79
4.4.	The Invention of Ethernet	82
4.4.1.	Xerox PARC: Putting a Computer on Every Desk	83
4.4.2.	The Invention of Ethernet	87
4.5.	Conclusion	93
5.	The Beginning of the Commercialization of LAN Technology	96
5.1.	Introduction	96
5.2.	Network Systems, Zilog, and Nestar: Launching Products and Firms	97
5.3.	Falling by the Wayside or Remaining Niche Players: The Problems of a Head Start	104
5.4.	Turning a Head Start into a Strong Position in the Impending Standard Battle: Datapoint	114
5.5.	Conclusion	118
6.	The Standardization of LAN Technology by the IEEE 802	121
6.1.	Introduction	121
6.2.	The Formation of an Alliance for a <i>de facto</i> LAN Standard: DEC, Intel, and Xerox	122
6.3.	The Launching of a <i>de jure</i> Standardization Project by the IEEE	129
6.4.	Fusion, Clash, and Three Standards	133
6.5.	The Elaboration of the Standards and a Final Skirmish	144
6.6.	Conclusion	146

7.	The Formation of the Ethernet Community	150
7.1.	Introduction	150
7.2.	The Pioneers: 3Com and Ungermann-Bass	151
7.3.	The Growth of the Community	158
7.4.	Specialization, New Markets, and an Increasing Product Variety	161
7.5.	Collaboration and Competition	170
7.6.	Conclusion	173
8.	The Rise and Fall of Ethernet's Proprietary Competitors	176
8.1.	Introduction	176
8.2.	The Commercialization and Rise of the Proprietary LANs	177
8.3.	Community-Building Efforts by their Sponsors	182
8.4.	The Fall of the Proprietary LANs	188
8.4.1.	Idiosyncratic Reasons	189
8.4.2.	Community-Related Reasons	192
8.5.	Conclusion	199
9.	The Battle between Ethernet and Token Ring	202
9.1.	Introduction	202
9.2.	Ethernet vs. Token Ring at the Beginning of the Battle	203
9.3.	The Closure of the Technological Gap by Ethernet	210
9.3.1.	Starlan	211
9.3.2.	The Final Breakthrough by SynOptics: Ethernet at its Full Speed on the Telephone Wire	213
9.3.3.	Renewed Standardization	217
9.3.4.	The Arrival of Intelligent Hubs	223
9.4.	The Failure of Token Ring to Keep Pace with Ethernet	225
9.5.	Conclusion	235
10.	Conclusion	239
	Appendix A: List of Interviews	251
	Appendix B: Table of Sales of LAN Firms	253
	References	254
	Lebenslauf	290
