<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Models and Main Results</b>	<b>7</b>
2.1	Graph Theory . . . . .	7
2.2	Routing . . . . .	8
2.2.1	The Basic Model . . . . .	8
2.2.2	Main Results . . . . .	10
2.3	Job Shop Scheduling . . . . .	12
2.3.1	The Basic Model . . . . .	12
2.3.2	Main Results . . . . .	12
2.4	Algorithmic Forms of the Lovász Local Lemma . . . . .	13
2.4.1	Basic Notation . . . . .	13
2.4.2	Main Results . . . . .	14
2.5	Probabilistic Methods . . . . .	15
<b>3</b>	<b>Introduction to Probability Theory</b>	<b>17</b>
3.1	Basic Notation and Concepts . . . . .	17
3.1.1	Set Theory . . . . .	17
3.1.2	Combinatorics . . . . .	18
3.2	Basic Concepts in Probability Theory . . . . .	21
3.2.1	Events . . . . .	22
3.2.2	The Inclusion-Exclusion Principle . . . . .	22
3.2.3	Conditional Probability . . . . .	25
3.2.4	Random Variables . . . . .	26
3.2.5	Expectation . . . . .	27
3.2.6	Correlation . . . . .	31
3.2.7	Variance . . . . .	34
3.2.8	Higher Order Moments . . . . .	38
3.2.9	Basic Probability Distributions . . . . .	42
3.2.10	Approximations of Probability Distributions . . . . .	45
3.3	Tail Estimates . . . . .	47
3.3.1	Tail Estimates Based on the Expectation . . . . .	49
3.3.2	Tail Estimates Based on the Variance . . . . .	53
3.3.3	Tail Estimates for Dependent Random Variables . . . . .	54
3.3.4	Proofs of the Theorems in Section 3.3 . . . . .	60
3.4	The Method of Bounded Differences . . . . .	66
3.4.1	Independent Bounded Differences Inequalities . . . . .	67
3.4.2	Martingales and the Method of Bounded Differences . . . . .	68

3.5	Witness Structures	70
3.5.1	Examples	70
3.6	The Lovász Local Lemma	79
3.6.1	Existential Proofs using the Local Lemma	80
3.6.2	Constructive Proofs using the Local Lemma	84
<b>4</b>	<b>Transforming Static into Dynamic Protocols</b>	<b>91</b>
4.1	Introduction	91
4.1.1	Models and Problems	92
4.1.2	Previous Results	93
4.1.3	New Results	94
4.2	A Black Box Transformation Scheme	95
4.2.1	Description of $\mathcal{P}'$	96
4.2.2	Analysis of $\mathcal{P}'$ for Non-Pure $\mathcal{P}$	99
4.2.3	Analysis of $\mathcal{P}'$ for Pure $\mathcal{P}$	104
4.3	Adapting the Results to the Adversarial Model	105
4.4	Conclusions	106
<b>5</b>	<b>Locally Efficient Switching Protocols</b>	<b>107</b>
5.1	Introduction	107
5.1.1	Models and Problems	108
5.1.2	Previous Results	109
5.1.3	New Results	109
5.2	Static Packet Switching	110
5.2.1	The FLP Protocol	110
5.2.2	The SLP Protocol	117
5.3	Dynamic Packet Switching	118
5.3.1	The FDLP Protocol	118
5.3.2	Stability Under Any Bounded Injection Model	121
5.4	Conclusion	122
<b>6</b>	<b>Routing in Ad Hoc Wireless Networks</b>	<b>123</b>
6.1	Introduction	123
6.1.1	Previous Work	124
6.1.2	The Model	125
6.1.3	On the Hardness of Routing in Ad Hoc Networks	126
6.1.4	New Results	127
6.2	A Universal Framework for Wireless Communication	128
6.2.1	Strategies for the MAC Layer	129
6.2.2	Path Selection Strategies for PCGs	133
6.2.3	Switching Strategies for PCGs	138
6.2.4	Putting Everything Together	145
6.3	Wireless Communication in a Euclidean Space	145
6.3.1	Upper Bounds	145
6.3.2	Lower Bounds	152
6.4	Proof of Theorem 6.13	155
6.4.1	The Uniform Case	155
6.4.2	The Non-Uniform Case	160

6.5	Conclusion	168
<b>7</b>	<b>Job Shop Scheduling</b>	<b>169</b>
7.1	Introduction	169
7.1.1	New Results	171
7.2	Upper Bounds	173
7.2.1	Definitions	173
7.2.2	Transforming Illegal into Legal Job Shop Schedules	174
7.2.3	An Intermediate Schedule for General JSS	177
7.2.4	An Intermediate Schedule for Acyclic JSS	181
7.2.5	Proof of Item 2 of Theorem 1.1	189
7.3	Lower Bounds	191
7.3.1	General Job Shop Scheduling	191
7.3.2	Acyclic Job Shop Scheduling	192
7.4	Conclusion	195
<b>8</b>	<b>Coloring Non-Uniform Hypergraphs</b>	<b>197</b>
8.1	Introduction	197
8.1.1	New Results	198
8.1.2	Organization of the Chapter	200
8.2	Description of the Algorithm	200
8.3	Analysis of the Algorithm	204
8.3.1	A Technical Lemma	207
8.3.2	Counting Valid 1-Neighborhood Sets	209
8.3.3	Counting Valid 2-Neighborhood Sets	210
8.3.4	Proof of Proposition 3.8	210
8.4	A randomized linear-time algorithm for 2-coloring	211
8.5	Extensions to $c$ -coloring	213
8.6	Proof of Proposition 8.18	214
8.7	Conclusions	215
<b>9</b>	<b>A General Algorithmic Approach to the LLL</b>	<b>217</b>
9.1	Introduction	217
9.1.1	New Results	218
9.2	The Local Lemma Algorithm	219
9.2.1	Description of the Algorithm	220
9.2.2	Analysis of the Algorithm	223
9.2.3	A Technical Lemma	226
9.2.4	Counting Witness Extensions of 1- and 3-Component Edges	227
9.2.5	Counting Witness Extensions of 2-Component Edges	228
9.2.6	Counting Witness Extensions	229
9.2.7	Proof of Lemma 9.8	229
9.3	The MIP Algorithm	230
9.4	Applications	235
9.4.1	Job Shop Scheduling	235
9.4.2	Satisfiability	240
9.5	Conclusions	241
