CONTENTS

PREFACE

1. HISTORY

Who Gave You the Epsilon? Cauchy and the Origins of Rigorous Calculus
JUDITH V. GRABINER 1

An Application of Geography to Mathematics: History of the Integral of the Secant
V. FREDERICK RICKEY AND PHILIP M. TUCHINSKY 12

The Changing Concept of Change: The Derivative from Fermat to Weierstrass
JUDITH V. GRABINER 17

Bibliographic Entries: History 29

2. PEDAGOGY

Calculus as an Experimental Science R. P. BOAS, JR 30

The Problem of Learning to Teach
P. R. HALMOS, E. E. MOISE, GEORGE PIRANIAN 34

A Mock Symposium for Your Calculus Class DENNIS WILDFOGEL 45

Calculus by Mistake LOUISE S. GRINSTEIN 47

Testing Understanding and Understanding Testing
JEAN PEDERSON AND PETER ROSS 54

Bibliographic Entries: Pedagogy 61

3. FUNCTIONS

(a) CONCEPTS

On the Notion of "Function." — G. J. MINTY — 62

Bibliographic Entries: Concepts — 63

(b) TRIGONOMETRIC FUNCTIONS

On the Differentiation Formula for $\sin \theta$ — DONALD HARTIG — 64

π and the Limit of $(\sin \alpha)/\alpha$ — LEONARD GILLMAN — 65

Graphs and Derivatives of the Inverse Trig Functions — DANIEL A. MORAN — 69

Trigonometric Identities through Calculus — HERB SILVERMAN — 70

Bibliographic Entries: Trigonometric Functions — 71

(c) LOGARITHMIC FUNCTIONS

The Logarithmic Mean — B. C. CARLSON — 72

Is ln the Other Shoe? — BYRON L. MCALLISTER AND J. ELDON WHITESITT — 76

The Place of ln x Among the Powers of x — HENRY C. FINLAYSON — 79

Bibliographic Entries: Logarithmic Functions — 79

(d) EXPONENTIAL AND HYPERBOLIC FUNCTIONS

An Elementary Discussion of the Transcendental Nature of the Elementary Transcendental Functions — R. W. HAMMING — 80

A Matter of Definition — M. C. MITCHELMORE — 84

The Relationship Between Hyperbolic and Exponential Functions — ROGER B. NELSEN — 89

Bibliographic Entries: Exponential and Hyperbolic Functions — 91

4. LIMITS AND CONTINUITY

Some Thoughts about Limits — RAY REDHEFFER — 92

Bibliographic Entries: Limits and Continuity — 103

5. DIFFERENTIATION

(a) THEORY

An Introduction to Differential Calculus — D. G. HERR — 104

An Elementary Proof of a Theorem in Calculus — DONALD E. RICHMOND — 107

Inverse Functions and their Derivatives — ERNST SNAPPER — 108

An Elementary Result on Derivatives — DAVID A. BIRNBAUM AND NORTHRUP FOWLER III — 111

Mapping Diagrams, Continuous Functions and Derivatives — THOMAS J. BRIESKE — 113

A Self-contained Derivation of the Formula $d/dx\,(x^r) = rx^{r-1}$ for Rational r — PETER A. LINDSTROM — 119

$(x^n)' = nx^{n-1}$: Six Proofs — RUSSELL JAY HENDEL — 121

A Note on Differentiation — RUSSELL EULER — 123

Differentials and Elementary Calculus — D. F. BAILEY — 124

The Differentiability of a^x — J. A. EIDSWICK — 126

Bibliographic Entries: Theory — 127

(b) APPLICATIONS TO GEOMETRY

The Width of a Rose Petal — S. C. ALTHOEN AND M. F. WYNEKEN — 128

Differentiating Area and Volume — JAY I. MILLER — 134

Convexity in Elementary Calculus: Some Geometric Equivalences — VICTOR A. BELFI — 136

Does "holds water" Hold Water? — R. P. BOAS — 141

Transitions — JEANNE L. AGNEW AND JAMES R. CHOIKE — 142

A Note on Parallel Curves — ALLAN J. KROOPNICK — 152

Bibliographic Entries: Applications to Geometry — 153

(c) APPLICATIONS TO MECHANICS

Velocity Averages — GERALD T. CARGO — 154

Travelers' Surprises — R. P. BOAS — 156

Related Rates and the Speed of Light — S. C. ALTHOEN AND J. F. WEIDNER — 163

Intuition Out to Sea — WILLIAM A. LEONARD — 167

Bibliographic Entries: Applications to Mechanics — 168

(d) DIFFERENTIAL EQUATIONS

A Fact About Falling Bodies — WILLIAM C. WATERHOUSE — 169
The Homicide Problem Revisited — DAVID A. SMITH — 170
A Linear Diet Model — ARTHUR C. SEGAL — 175
Bibiographic Entries: Differential Equations — 176

(e) PARTIAL DERIVATIVES

Using the Multivariable Chain Rule — FRED HALPERN — 177
Bibliographic Entries: Partial Derivatives — 178

6. MEAN VALUE THEOREM FOR DERIVATIVES, INDETERMINATE FORMS

(a) MEAN VALUE THEOREM

A Versatile Vector Mean Value Theorem — D. E. SANDERSON — 179
Who Needs Those Mean-Value Theorems, Anyway? — RALPH P. BOAS — 182

(b) INDETERMINATE FORMS

Lhospital's Rule Without Mean-Value Theorems — R. P. BOAS, JR — 187
Indeterminate Forms of Exponential Type — JOHN V. BAXLEY AND ELMER K. HAYASHI — 190
Counterexamples to L'Hôpital's Rule — R. P. BOAS — 192
L'Hôpital's Rule Via Integration — DONALD HARTIG — 194
Indeterminate Forms Revisited — R. P. BOAS — 196
L'Hôpital's Rule and the Continuity of the Derivative — J. P. KING — 202
Some Subtleties in L'Hôpital's Rule — ROBERT J. BUMCROT — 203
Bibliographic Entries: Indeterminate Forms — 204

7. TAYLOR POLYNOMIALS, BERNOULLI POLYNOMIALS AND SUMS OF POWERS OF INTEGERS

(a) TAYLOR POLYNOMIALS

From Center of Gravity to Bernstein's Theorem — RAY REDHEFFER — 205

A Simple Derivation of the Maclaurin Series for Sine and Cosine DENG BO 207
Trigonometric Power Series JOHN STAIB 208
Rediscovering Taylor's Theorem DAN KALMAN 211
Bibliographic Entries: Taylor Polynomials 216

(b) BERNOULLI POLYNOMIALS AND SUMS OF POWERS OF INTEGERS

(no papers reproduced)
Bibliographic Entries: Bernoulli Polynomials and Sums of Powers of Integers 216

8. MAXIMA AND MINIMA

A Strong Second Derivative Test J. H. C. CREIGHTON 217
Cutting Certain Minimum Corners L. H. LANGE 219
An Optimization Problem RICHARD BASSEIN 224
An Old Max-Min Problem Revisited MARY EMBRY-WARDROP 229
Maximize $x(a - x)$ L. H. LANGE 232
Construction of an Exercise Involving Minimum Time ROBERT OWEN ARMSTRONG 236
A Bifurcation Problem in First Semester Calculus W. L. PERRY 241
To Build a Better Box KAY DUNDAS 244
A Surprising Max-Min Result HERBERT BAILEY 251
Hanging a Bird Feeder: Food for Thought JOHN W. DAWSON, JR. 255
Peaks, Ridge, Passes, Valley, and Pits. A Slide Study of $f(x, y) = Ax^2 + By^2$ CLIFF LONG 257
A Surface with One Local Minimum J. MARSHALL ASH AND HARLAN SEXTON 259
"The Only Critical Point in Town" Test IRA ROSENHOLTZ AND LOWELL SMYLIE 262
Bibliographic Entries: Maxima and Minima 264

9. INTEGRATION

(a) THEORY

A Fundamental Theorem of Calculus that Applies to All Riemann Integrable Functions — MICHAEL W. BOTSKO — 265
Finding Bounds for Definite Integrals — W. VANCE UNDERHILL — 268
Average Values and Linear Functions — DAVID E. DOBBS — 271
Riemann Integral of cos x — JOHN H. MATHEWS AND HARRIS S. SHULTZ — 275
Sums and Differences vs. Integrals and Derivatives — GILBERT STRANG — 276
Bibliographic Entries: Theory — 284

(b) TECHNIQUES OF INTEGRATION

Inverse Functions and Integration by Parts — R. P. BOAS, JR. AND M. B. MARCUS — 285
Proof Without Words: Integration by Parts — ROGER B. NELSEN — 287
A Discovery Approach to Integration by Parts — JOHN STAIB AND HOWARD ANTON — 288
Formal Integration: Dangers and Suggestions — S. K. STEIN — 290
The Evaluation of $\int_a^b x^k\,dx$ — N. SCHAUMBERGER — 300
Bibliographic Entries: Techniques of Integration — 301

(c) SPECIAL INTEGRALS

Bibliographic Entries: Special Integrals — 302

(d) APPLICATIONS

Disks and Shells Revisited — WALTER CARLIP — 303
Upper Bounds on Arc Length — RICHARD T. BUMBY — 305
A Theorem on Arc Length — JOHN KAUCHER — 308
A Note on Arc Length — JOHN T. WHITE — 309
"Mean Distance" in Kepler's Third Law — SHERMAN K. STEIN — 310
Some Problems of Utmost Gravity — WILLIAM C. STRETTON — 312
A New Look at an Old Work Problem — BERT K. WAITS AND JERRY L. SILVER — 317
Some Surprising Volumes of Revolution — G. L. ALEXANDERSON AND L. F. KLOSINSKI — 321
Surface Area and the Cylinder Area Paradox — FRIEDA ZAMES — 324

Using Integrals to Evaluate Voting Power — PHILIP D. STRAFFIN, JR 329
Area of a Parabolic Region — R. ROZEN AND A. SOFO 332
Bibliographic Entries: Applications 334

(e) MULTIPLE INTEGRALS AND LINE INTEGRALS

Change of Variables in Multiple Integrals: Euler to Cartan — VICTOR J. KATZ 335
Three Aspects of Fubini's Theorem — J. CHRIS FISHER AND J. SHILLETO 345
The Largest Unit Ball in Any Euclidean space — JEFFREY NUNEMACHER 348
Volumes of Cones, Paraboloids, and Other "Vertex Solids." — PAUL B. MASSELL 350
Interchanging the Order of Integration — STEWART VENIT 352
Bibliographic Entries: Multiple Integrals and Line Integrals 353

10. NUMERICAL, GRAPHICAL, AND MECHANICAL METHODS AND APPROXIMATIONS (INCLUDING USE OF COMPUTERS)

Numerical Differentiation for Calculus Students — DAVID A. SMITH 354
The Error of the Trapezoidal Method for a Concave Curve — S. K. STEIN 358
A Non-Simpsonian Use of Parabolas in Numerical Integration — ARTHUR RICHERT 361
Reconsidering Area Approximations — GEORGE P. RICHARDSON 362
An Interpolation Question Resolved by Calculus — MARTIN D. LANDAU AND WILLIAM R. JONES 366
Generalized Cycloids: Discovery via Computer Graphics — SHELDON P. GORDON 370
Behold! The Midpoint Rule is Better Than the Trapezoidal Rule for Concave Functions — FRANK BURK 376
Applications of Transformations to Numerical Integration — CHRIS W. AVERY AND FRANK P. SOLER 377
Circumference of a Circle—the Hard Way — DAVID P. KRAINES, VIVIAN Y. KRAINES AND DAVID A. SMITH 380
Note on Simpson's Rule — ANON 383
Bibiographic Entries: Numerical, Graphical, and Mechanical Methods and Approximations, (Including use of Computers) 384

11. INFINITE SEQUENCES AND SERIES

(a) THEORY

Interval of Convergence of Some Power Series — EUGENE SCHENKMAN — 385

An Alternative to the Integral Test for Infinite Series — G. J. PORTER — 387

A Sequence of Convergence Tests — J. R. NURCOMBE — 389

Every Power Series is a Taylor Series — MARK D. MEYERSON — 392

Power Series Without Taylor's Theorem — WELLS JOHNSON — 394

More–and Moore–Power Series Without Taylor's Theorem — I. E. LEONARD AND JAMES DUEMMEL — 396

$N!$ and the Root Test — CHARLES C. MUMMA II — 398

A Simple Test for the nth Term of a Series to Approach Zero — JONATHAN LEWIN AND MYRTLE LEWIN — 399

Convergence and Divergence of $\Sigma_{n=1}^{\infty} 1/n^p$ — TERESA COHEN AND WILLIAM J. KNIGHT — 400

A Differentiation Test for Absolute Convergence — YASER S. ABU-MOSTAFA — 401

A Note on Infinite Series — LOUISE S. GRINSTEIN — 405

Power Series for Practical Purposes — RALPH BOAS — 407

Bibliographic Entries: Theory — 411

(b) SERIES RELATED TO THE HARMONIC SERIES

An Interesting Subseries of the Harmonic Series — A. D. WADHWA — 412

A Proof of the Divergence of $\Sigma 1/p$ — IVAN NIVEN — 414

Proofs that $\Sigma 1/p$ Diverges — CHARLES VANDEN EYNDEN — 415

The Sum of the Reciprocals of the Primes — W. G. LEAVITT — 418

The Bernoullis and the Harmonic Series — WILLIAM DUNHAM — 419

Rearranging the Alternating Harmonic Series — C. C. COWEN, K. R. DAVIDSON AND R. P. KAUFMAN — 425

Bibliographic Entries: Series Related to the Harmonic Series — 427

(c) SUMS OF SPECIAL SERIES

A Simple Proof of the Formula $\Sigma_{k=1}^{\infty} k^{-2} = \pi^2/6$ — IOANNIS PAPADIMITRIOU — 428

Application of a Mean Value Theorem for Integrals to Series Summation — EBERHARD L. STARK — 430

Summing Power Series with Polynomial Coefficients — JOHN KLIPPERT — 432

A Geometric Proof of the Formula for ln 2 — FRANK KOST 434
On Sum-Guessing — MANGHO AHUJA 436
The Sum is One — JOHN H. MATHEWS 441
Bibliographic Entries: Sums of Special Series 442

12. SPECIAL NUMBERS

(a) e

A Discovery Approach to e — J. P. TULL 443
Simple Proofs of Two Estimates for e — R. B. DARST 444
Which is Larger, e^{π} or π^{e}? — IVAN NIVEN 445
Proof Without Words: $\pi^{e} < e^{\pi}$ — FOUAD NAKHLI 448
Two More Proofs of a Familiar Inequality — ERWIN JUST AND NORMAN SCHAUMBERGER 449
An Alternate Classroom Proof of the Familiar Limit for e — NORMAN SCHAUMBERGER 450
Bibliographic Entries: e 452

(b) π

Bibliographic Entries: π 453

(c) EULER'S CONSTANT

Bibliographic Entries: Euler's Constant 453

13. THE LIGHT TOUCH

The Derivative Song — TOM LEHRER 454
There's a Delta for Every Epsilon (Calypso) — TOM LEHRER 454
The Professor's Song — TOM LEHRER 455
Limerick — ARTHUR WHITE 455
The Versed of Boas — RALPH P. BOAS 456
Area of an Ellipse — ED BARBEAU 457
Cauchy's Negative Definite Integral — ED BARBEAU 457

A Positive Vanishing Integral	Ed Barbeau and M. Bencze	458
$\cos x = \sinh x$ and $1 = 0$	Ed Barbeau and Robert Weinstock	458
A Power Series Representation	Ed Barbeau	458
Differentiating the Square of x	Ed Barbeau and A. W. Walker	459
More Fun with Series	Ed Barbeau	459
A New Way to Obtain the Logarithm	Ed Barbeau and Lewis Lum	459
All Powers of x are Constant	Ed Barbeau and Alex Kuperman	460
A Natural Way to Differentiate an Exponential	Ed Barbeau and Gerry Myerson	460
