TABLE OF CONTENTS

53. Canonical forms of quaternary Abelian substitutions in an arbitrary Galois field, [52] 7

54. Theory of linear groups in an arbitrary field, [53] 43

55. On the group defined for any given field by the multiplication table of any given finite group, [66] 75

56. The groups of Steiner in problems of contact, [65] 92

57. On the reducibility of linear groups, [88] 100

58. The groups of Steiner in problems of contact (second paper), [67] 103

59. Definitions of a field by independent postulates, [85] 109

60. Definitions of a linear associative algebra by independent postulates, [86] 117

61. On the subgroups of order a power of p in the quaternary Abelian group in the Galois field of order p^n, [87] 123

62. The subgroups of order a power of 2 of the simple quinary orthogonal group in the Galois field of order $p^n = 8l \pm 3$, [97] . 139

63. On hypercomplex number systems, [111] 177

64. The minimum degree τ of resolvents for the p-section of the periods of hyperelliptic functions of four periods, [107] 182

65. On commutative linear algebras in which division is always uniquely possible, [126] 192

66. Linear algebras in which division is always uniquely possible, [125] 201

67. Invariants of binary forms under modular transformations, [133] 223

68. Modular theory of group-matrices, [134] 251
69. Representations of the general symmetric group as linear groups in finite and infinite fields, [141] 261
70. Definite forms in a finite field, [154] 289
71. General theory of modular invariants, [155] 303
72. Linear algebras, [178] 339
73. Proof of the finiteness of modular covariants, [179] 355
74. Linear associative algebras and Abelian equations, [189] 367
75. Quartic curves modulo 2, [197] 383
76. Determination of all general homogeneous polynomials expressible as determinants with linear elements, [216] 393
77. New division algebras, [246] 407
78. Singular case of pairs of bilinear, quadratic, or Hermitian forms, [249] 435
79. Universal quadratic forms, [270] 450
80. Simpler proofs of Waring's theorem on cubes, with various generalizations, [260] 477
81. Construction of division algebras, [273] 495
82. Waring's problem for cubic functions, [279] 511
83. A new method for Waring theorems with polynomial summands, [280] 523
84. Cyclotomy when e is composite, [289] 541
85. Cyclotomy and trinomial congruences, [288] 555
86. A new method for Waring theorems with polynomial summands, II, [294] 573
87. Some relations between the theory of numbers and other branches of mathematics, [214] 579
88. Homogeneous polynomials with a multiplication theorem, [215] 595
89. Linear algebras with associativity not assumed, [291] 613
90. The ideal Waring theorem for twelfth powers, [302] 626
90a. On the inscription of regular polygons, [8] 639

90b, c. The analytic representation of substitutions on a power of a prime number of letters with a discussion of the linear group, [13] 651

90d. A generalization of Fermat's theorem, [30] 731

90e. An elementary exposition of Frobenius's theory of group-characters and group-determinants, [75] 737
