Introdu	ction by Werner Hildenbrand	1
1	The axiomatic method	3
2	Contributions to welfare economics	8
3	Existence of competitive equilibria	16
	Large economies and the core	21
	Utility and demand theory	24
6	Regular differential economies	27
Chapter	1. The coefficient of resource utilization	30
	Introduction	30
2	Basic mathematical concepts	33
	Description of the economic system	33
4	Optimum and loss defined in the satisfaction space	35
5	Optimum and loss defined in the commodity space	36
	The optimum theorem	36
7	Historical note	39
8	The discontinuous case	40
9	The coefficient of resource utilization $\rho$	41
	Definitions of the economic loss	43
11	Minimax interpretation of $\rho$	44
12	Isomorphism with the theory of statistical decision	
	functions	45

V111	Contents

Chapter 2. A social equilibrium existence theorem	50
1 Topological concepts	51
2 Equilibrium points	52
3 Saddle points and MinMax operator	55
4 Historical note	56
References	57
Chapter 3. A classical tax-subsidy problem	59
1 The economic system	60
2 The coefficient of resource utilization $\rho$	61
3 First and second differentials of $\rho$	62
4 A general expression of the economic loss	64
5 Application to the tax-subsidy case	66
References	67
Chapter 4. Existence of an equilibrium for a competitive	
economy (by Kenneth J. Arrow and Gerard Debreu)	68
Introduction	68
1 Statement of the first existence theorem for a	
competitive equilibrium	70
2 A lemma on abstract economies	77
3 Proof of Theorem I	79
4 Statement of the second existence theorem for a	
competitive equilibrium	85
5 Proof of Theorem II	88
6 Historical note	94
References	96
Chapter 5. Valuation equilibrium and Pareto optimum	98
1 The economic system	99
2 Valuation equilibrium	100
3 Pareto optimum	100
4 A valuation equilibrium is a Pareto optimum	100
5 A Pareto optimum is a valuation equilibrium	101
6 The free disposal assumption	104
Chapter 6. Representation of a preference ordering by a	
numerical function	105
1 Introduction	105
2 Two representation lemmas	106
3 Two representation theorems	108
References	110

Chapter 7. Market equilibrium Appendix References 113  Chapter 8. Economics under uncertainty 115  Chapter 9. Topological methods in cardinal utility theory 1 Stochastic objects of choice 2 Stochastic act of choice 3 Independent factors of the action set References 131  Chapter 10. New concepts and techniques for equilibrium analysis 1 Introduction 2 Lemmata 3 Proof of the theorem 4 Equilibrium and quasi-equilibrium References 149  Chapter 11. A limit theorem on the core of an economy (by Gerard Debreu and Herbert Scarf) 1 Introduction 2 The core in a pure exchange economy 153 3 The core as the number of consumers becomes infinite 4 The core in a productive economy 5 Generalizations References 162  Chapter 12. Continuity properties of Paretian utility 1 Introduction 2 Proof of the theorem 3 Continuity properties of the representation 4 An example References 171  Chapter 13. Neighboring economic agents References 172  Chapter 14. Economies with a finite set of equilibria 175 References 177  Chapter 14. Economies with a finite set of equilibria 176 References 177	Contents	ix

Chapter 15. Smooth preferences	186
1 Non-emptiness of $E(\mathscr{E})$	186
2 Discreteness of $E(\mathscr{E})$	187
3 Continuity of E	189
References	199
Smooth preferences: a corrigendum	201
References	202
Chapter 16. Excess demand functions	203
1 Proof of the theorem	204
2 Appendix	208
3 Proof of the proposition	209
References	209
Chapter 17. The rate of convergence of the core of an economy	210
Proof of the theorem	212
References	216
Chapter 18. Four aspects of the mathematical theory of	
economic equilibrium	217
1 The existence of economic equilibria	217
2 The computation of economic equilibria	221
3 Regular differentiable economies	224
4 The core of a large economy	226
References	230
Chapter 19. The application to economics of differential	
topology and global analysis: regular differentiable economies	232
References	239
Chapter 20. Least concave utility functions	242
1 Introduction	242
2 Existence of least concave representation	243
3 Proof of the theorem	245
References	250
