

CONTENTS

<i>Paper</i>	<i>Page</i>
I The principles of orthogonality and confounding in replicated experiments	I
II The analysis of replicated experiments when the field results are incomplete	41
III The formation of Latin squares for use in field experiments	57
IV Complex experiments	69
V The analysis of groups of experiments	119
VI A new method of arranging variety trials involving a large number of varieties	147
VII Incomplete randomized blocks	181
VIII The recovery of inter-block information in balanced incomplete block designs	201
IX Analysis of data from all possible reciprocal crosses between a set of parental lines	211
X The analysis of experiments containing different crop rotations	229
XI Principles governing the amount of experimentation in developmental work	255
XII A fresh look at the basic principles of the design and analysis of experiments	265
Note on fixed and random effects models	281
<i>Bibliography</i>	287
<i>Index</i>	295
