

Contents

Dedication	v
Preface	vii
Non-unique Solutions of the Euler Equations	1
<i>G. Baruzzi, W.G. Habashi, and M.M. Hafez</i>	
Navier-Stokes Computations of Three-Dimensional Laminar Flows with Buoyancy in a Channel with Wing-Type Vortex Generators	11
<i>Gautam Biswas, Nimai Kumar Mitra and Martin Fiebig</i>	
The Numerical Solution of the Biharmonic Equation, Using a Spectral Multigrid Method	25
<i>R.W. de Vries and P.J. Zandbergen</i>	
Finite Volume Shape and Placement for Efficiency, Accuracy, and Physics	36
<i>Harry A. Dwyer</i>	
NND Schemes and their Application to Numerical Simulation of Complex Plume Flow Problems	45
<i>Zhuang Fenggan</i>	
Symbolic Analysis and Computational Algorithm Construction	57
<i>Clive A.J. Fletcher</i>	
Velocity and Mass Flux Distribution Measurements of Spherical Glass Beads in Air Flow in a 90° Vertical-to Horizontal Bend	69
<i>Yannis Kliafas</i>	
Hyperbolic Solution Adaptive Mesh Generation	91
<i>G.H. Klopfer</i>	
From the Kármán-Trefftz Profile to Cast-7—75 Years of the Aerodynamisches Institut	103
<i>Egon Krause</i>	

Progress and Future Directions in Computational Fluid Dynamics	115
<i>Paul Kutler</i>	
Computer Models Needed to Analyze the Hazard of Direct Containment Heating (DCH)	133
<i>Tim M. Lee</i>	
Numerical Simulation of Shock Focussing	145
<i>D. Leutloff, K.G. Roesner, and R.C. Srivastava</i>	
The Interaction Between a Pair of Counter-Rotating Potential Vortices in Vertical Ascent and a Free Surface	155
<i>Daniel L. Marcus and Stanley A. Berger</i>	
Microbubble Formulation and Splitting in a Turbulent Boundary Layer for Turbulence Reduction	168
<i>James C.S. Meng and James S. Uhlman, Jr.</i>	
Some Remarks on the Kutta Condition	218
<i>Koichi Oshima</i>	
The Simple Fluid Concept	228
<i>R.S. Rivlin and G.F. Smith</i>	
On the Uniqueness of Discrete Shock Waves	240
<i>V.V. Rusanov and IV. Bezmenov</i>	
Computational Fluid Mechanics in R&D on Uranium Enrichment	247
<i>Soubbaramayer</i>	
Numerical Study of Spherical Taylor-Couette Flow	264
<i>R.-J. Yang</i>	
Trajectories of Vortex Lines Beneath a Free Surface or Above a Plane . . .	275
<i>B. Yim</i>	
A Mathematical Model for Response of the Coronary Circulation to High Sustained Gravitational Force Fields	284
<i>Sophia Huai Zhou, Emilia Mateeva, and Richard Collins</i>	
A Class of Discontinuities Caused by ‘Delta Functions’	305
<i>You-lan Zhu</i>
