

CONTENTS

Dedication to Professor John H. Argyris	v
Main Distinctions of Professor John H. Argyris	ix
Acknowledgments	xi
List of Contributors	xiii
Preface	xv
<i>Chapter 1</i> On the Natural Approach to Flow Problems <i>J.H. Argyris & J. St. Doltsinis</i> <i>(University of Stuttgart, Fed. Rep. Germany)</i>	1
<i>Chapter 2</i> Interactive Computer Graphics for Finite Element, Boundary Element, & Finite Difference Methods <i>J.F. Abel, A.R. Ingraffea, R. Perucchio, T.-Y. Han, & J.F. Hajjar</i> <i>(Cornell University)</i>	47
<i>Chapter 3</i> Hybrid Methods of Analysis <i>S.N. Atluri & T. Nishioka (Georgia Institute of Technology)</i>	65
<i>Chapter 4</i> The Postprocessing Technique in the Finite Element Method. The Theory & Experience <i>I. Babuška (University of Maryland), K. Izadpanah, & B. Szabo</i> <i>(Washington University)</i>	97
<i>Chapter 5</i> On Finite Element Analysis of Large Deformation Frictional Contact Problems <i>K.-J. Bathe & A. Chaudhary (MIT)</i>	123
<i>Chapter 6</i> Mixed Variational Finite Element Methods for Interface Problems <i>J. Bielak & R.C. MacCamy (Carnegie-Mellon University)</i>	149
<i>Chapter 7</i> Preconditioned Iterative Methods for Nonselfadjoint or Indefinite Elliptic Boundary Value Problems <i>J.H. Bramble (Cornell University) & J.E. Pasciak (Brookhaven National Laboratory)</i>	167
<i>Chapter 8</i> On the Unification of Finite Elements & Boundary Elements <i>C.A. Brebbia (ICM, Southampton, England)</i>	185

<i>Chapter 9</i>	Unification of FEM with Laser Experimentation <i>H. Kardestuncer (University of Connecticut) & R.J. Pryputniewicz (Worcester Polytechnic Institute)</i>	207
<i>Chapter 10</i>	Linear Crossed Triangles for Incompressible Media <i>D.S. Malkus & E.T. Olsen (IIT, Chicago)</i>	235
<i>Chapter 11</i>	The Numerical Analysis of Necking Instabilities <i>A. Needleman (Brown University)</i>	249
<i>Chapter 12</i>	Recent Advances in the Application of Variational Methods to Nonlinear Problems <i>A.K. Noor (NASA – Langley)</i>	275
<i>Chapter 13</i>	Collocation Solution of the Transport Equation using a Locally Enhanced Alternating Direction Formulation <i>M.A. Celia & G.F. Pinder (Princeton University)</i>	303
<i>Chapter 14</i>	Numerical & Biological Shape Optimization <i>A. Philpott & G. Strang (MIT)</i>	321
<i>Index</i>		345
