<b>Preface</b>	<b>xvii</b>
<b>Sri Gopal Mohanty—Life and Works</b>	<b>xix</b>
<b>List of Contributors</b>	<b>xxvii</b>
<b>List of Tables</b>	<b>xxxix</b>
<b>List of Figures</b>	<b>xxxiii</b>
<b>PART I—LATTICE PATHS AND COMBINATORIAL METHODS</b>	
<b>1 Lattice Paths and Faber Polynomials</b>	<b>3</b>
<i>Ira M. Gessel and Sangwook Ree</i>	
1.1 Introduction, 3	
1.2 Faber Polynomials, 6	
1.3 Counting Paths, 7	
1.4 A Positivity Result, 10	
1.5 Examples, 11	
References, 13	
<b>2 Lattice Path Enumeration and Umbral Calculus</b>	<b>15</b>
<i>Heinrich Niederhausen</i>	
2.1 Introduction, 15	
2.1.1 Notation, 16	
2.2 Initial Value Problems, 16	
2.2.1 The role of $e^x$ , 18	
2.2.2 Piecewise affine boundaries, 18	
2.2.3 Applications: Bounded paths, 19	
2.3 Systems of Operator Equations, 20	
2.3.1 Applications: Lattice paths with several step directions, 21	
2.4 Symmetric Sheffer Sequences, 21	
2.4.1 Applications: Weighted left turns, 22	
2.4.2 Paths inside a band, 23	

2.5 Geometric Sheffer Sequences, 24	
2.5.1 Applications: Crossings, 25	
References, 26	
<b>3 The Enumeration of Lattice Paths With Respect to Their Number of Turns</b>	
<i>C. Krattenthaler</i>	<b>29</b>
3.1 Introduction, 29	
3.2 Notation, 31	
3.3 Motivating Examples, 31	
3.4 Turn Enumeration of (Single) Lattice Paths, 36	
3.5 Applications, 44	
3.6 Nonintersecting Lattice Paths and Turns, 47	
References, 55	
<b>4 Lattice Path Counting, Simple Random Walk Statistics, and Randomizations: An Analytic Approach</b>	
<i>Wolfgang Panny and Walter Katzenbeisser</i>	<b>59</b>
4.1 Introduction, 59	
4.2 Lattice Paths, 60	
4.3 Simple Random Walks, 64	
4.4 Randomized Random Walks, 70	
References, 74	
<b>5 Combinatorial Identities: A Generalization of Dougall's Identity</b>	
<i>Erik Sparre Andersen and Mogens Esrom Larsen</i>	<b>77</b>
5.1 Introduction, 77	
5.2 The Generalized Pfaff–Saalschütz Formula, 80	
5.3 A Modified Pfaff–Saalschütz Sum of Type $II(4, 4, 1)N$ , 82	
5.4 A Well–Balanced $II(5, 5, 1)N$ Identity, 83	
5.5 A Generalization of Dougall's Well–Balanced $II(7, 7, 1)N$ Identity, 85	
References, 87	
<b>6 A Comparison of Two Methods for Random Labelling of Balls by Vectors of Integers</b>	
<i>Doron Zeilberger</i>	<b>89</b>
6.1 First Way, 89	
6.2 Second Way, 89	
6.3 Variance and Standard Deviation, 91	

- 6.4 Analysis of the Second Way, 92  
References, 93

## PART II—APPLICATIONS TO PROBABILITY PROBLEMS

### 7 On the Ballot Theorems

*Lajos Takács*

97

- 7.1 Introduction, 97  
7.2 The Classical Ballot Theorem, 97  
7.3 The Original Proofs of Theorem 7.2.1, 100  
7.4 Historical Background, 102  
7.5 The General Ballot Theorem, 104  
7.6 Some Combinatorial Identities, 107  
7.7 Another Extension of The Classical Ballot Theorem, 109  
References, 111

### 8 Some Results for Two-Dimensional Random Walk

*Endre Csáki*

115

- 8.1 Introduction, 115  
8.2 Identities and Distributions, 118  
8.3 Pairs of LRW Paths, 120  
References, 123

### 9 Random Walks on $SL(2, F_2)$ and Jacobi Symbols of Quadratic Residues

*Toshihiro Watanabe*

125

- 9.1 Introduction, 125  
9.2 Preliminaries, 126  
9.3 A Calculation of the Character  $\chi(\sigma_{M,m})$  and Its Relation, 129  
References, 133

### 10 Rank Order Statistics Related to a Generalized Random Walk

*Jagdish Saran and Sarita Rani*

135

- 10.1 Introduction, 135  
10.2 Some Auxiliary Results, 136  
10.3 The Technique, 138  
10.4 Definitions of Rank Order Statistics, 139  
10.5 Distributions of  $N_{\mu,n}^{+*}(a)$  and  $R_{\mu,n}^{+*}(a)$ , 140  
10.6 Distributions of  $\Lambda_{\mu,n}^+(a)$  and  $Rf_{\mu,n}^+(a)$ , 144  
10.7 Distributions of  $N_{\mu,n}^*(a)$  and  $R_{\mu,n}^*(a)$ , 148  
References, 151

<b>11 On a Subset Sum Algorithm and Its Probabilistic and Other Applications</b>	
<i>V. G. Voinov and M. S. Nikulin</i>	<b>153</b>
11.1 Introduction, 153	
11.2 A Derivation of the Algorithm, 154	
11.3 A Class of Discrete Probability Distributions, 159	
11.4 A Remark on a Summation Procedure When Constructing Partitions, 160	
References, 162	
<b>12 <math>I</math> and <math>J</math> Polynomials in a Potpourri of Probability Problems</b>	
<i>Milton Sobel</i>	<b>165</b>
12.1 Introduction, 165	
12.2 Guide to the Problems of this Paper, 166	
12.3 Triangular Network with Common Failure Probability $q$ for Each Unit, 171	
12.4 Duality Levels in a Square with Diagonals That Do Not Intersect: Problem 12.5, 177	
References, 183	
<b>13 Stirling Numbers and Records</b>	
<i>N. Balakrishnan and V. B. Nevzorov</i>	<b>189</b>
13.1 Stirling Numbers, 189	
13.2 Generalized Stirling Numbers, 190	
13.3 Stirling Numbers and Records, 193	
13.4 Generalized Stirling Numbers and Records in the $F^\alpha$ -scheme, 195	
13.5 Record Values from Discrete Distributions and Generalized Stirling Numbers, 197	
References, 198	

### PART III—APPLICATIONS TO URN MODELS

<b>14 Advances in Urn Models During The Past Two Decades</b>	
<i>Samuel Kotz and N. Balakrishnan</i>	<b>203</b>
14.1 Introduction, 203	
14.2 Pólya-Eggenberger Urns and Their Generalizations and Modifications, 206	
14.3 Generalizations of the Classical Occupancy Model, 216	
14.4 Ehrenfest Urn Model, 219	

- 14.5 Pólya Urn Model with a Continuum of Colors, 225
- 14.6 Stopping Problems in Urns, 226
- 14.7 Limit Theorems for Urns with Random Drawings, 227
- 14.8 Limit Theorems for Sequential Occupancy, 228
- 14.9 Limit Theorems for Infinite Urn Models, 230
- 14.10 Urn Models with Indistinguishable Balls (Bose-Einstein Statistics), 231
- 14.11 Ewens Sampling Formula and Coalescent Urn Models, 233
- 14.12 Reinforcement-Depletion (Compartmental) Urn Models, 237
- 14.13 Urn Models for Interpretation of Mathematical and Probabilistic Concepts and Engineering and Statistical Applications, 243  
References, 247

**15 A Unified Derivation of Occupancy and Sequential Occupancy Distributions**

*Ch. A. Charalambides*

**259**

- 15.1 Introduction, 259
- 15.2 Occupancy Distributions, 260
- 15.3 Sequential Occupancy Distributions, 267  
References, 273

**16 Moments, Binomial Moments and Combinatorics**

*Janos Galambos*

**275**

- 16.1 Basic Relations, 275
- 16.2 Linear Inequalities in  $S_k$ ,  $p_r$  and  $q_r$ , 277
- 16.3 A Statistical Paradox and an Urn Model with Applications, 280
- 16.4 Quadratic Inequalities, 281  
References, 283

**PART IV—APPLICATIONS TO QUEUEING THEORY**

**17 Nonintersecting Paths and Applications to Queueing Theory**

*Walter Böhm*

**287**

- 17.1 Introduction, 287
- 17.2 Dissimilar Bernoulli Processes, 288
- 17.3 The  $r$ -Node Series Jackson Network, 291
- 17.4 The Dummy Path Lemma for Poisson Processes, 295
- 17.5 A Special Variant of  $D/M/1$  Queues, 297

References, 299

- 18 Transient Busy Period Analysis of Initially Non-Empty  $M/G/1$  Queues—Lattice Path Approach**  
*Kanwar Sen and Manju Agarwal* **301**
- 18.1 Introduction, 301
- 18.2 Lattice Path Approach, 304
- 18.3 Discretized  $M/C_2/1$  Model, 304
- 18.3.1 Transition probabilities, 304
- 18.3.2 Counting of lattice paths, 307
- 18.3.3 Busy period probability, 310
- 18.4 Continuous  $M/C_2/1$  Model, 312
- 18.5 Particular Cases, 313
- References, 313
- 19 Single Server Queueing System with Poisson Input: A Review of Some Recent Developments**  
*J. Medhi* **317**
- 19.1 Introduction, 317
- 19.2 Exceptional Service for the First Unit in Each Busy Period, 319
- 19.3  $M/G/1$  With Random Setup Time  $S$ , 320
- 19.4  $M/G/1$  System Under  $N$ -Policy, 322
- 19.5  $M/G/1$  Under  $N$ -Policy and With Setup Time, 323
- 19.6 Queues With Vacation:  $M/G/1$  Queueing System With Vacation, 324
- 19.7  $M/G/1 - V_m$  System, 325
- 19.8  $M/G/1 - V_m$  With Exceptional First Vacation, 326
- 19.9  $M/G/1 - V_s$  System, 327
- 19.10  $M/G/1$  System With Vacation and Under  $N$ -Policy (With Threshold  $N$ ), 328
- 19.11  $M^X/G/1$  System With Batch Arrival, 332
- 19.12  $M^X/G/1$  Under  $N$ -Policy, 332
- 19.13  $M^X/G/1 - V_m$  and  $M^X/G/1 - V_s$ , 334
- 19.14  $M^X/G/1$  Vacation Queues Under  $N$ -Policy, 334
- 19.15 Concluding Remarks, 335
- References, 336
- 20 Recent Advances in the Analysis of Polling Systems**  
*Diwakar Gupta and Yavuz Günalay* **339**
- 20.1 Introduction, 339
- 20.2 Notations and Preliminaries, 342
- 20.3 Main Results, 346

- 20.4 Some Related Models, 350
  - 20.4.1 Customer routing, 350
  - 20.4.2 Stopping only at a preferred station, 351
  - 20.4.3 Gated or mixed service policy, 351
  - 20.4.4 State-dependent setups, 352
  - 20.4.5 Periodic monitoring during idle period, 354
- 20.5 Insights, 355
- 20.6 Future Directions, 357
  - References, 357

## PART V—APPLICATIONS TO WAITING TIME PROBLEMS

### **21 Waiting Times and Number of Appearances of Events in a Sequence of Discrete Random Variables**

*Markos V. Koutras*

**363**

- 21.1 Introduction, 363
- 21.2 Definitions and Notations, 365
- 21.3 General Results, 366
- 21.4 Waiting Times and Number of Occurrences of Delayed Recurrent Events, 370
- 21.5 Distribution of the Number of Success Runs in a Two-State Markov Chain, 373
  - 21.5.1 Non-overlapping success runs, 374
  - 21.5.2 Success runs of length at least  $k$ , 376
  - 21.5.3 Overlapping success runs, 378
  - 21.5.4 Number of non-overlapping windows of length at most  $k$  containing exactly 2 successes, 378
- 21.6 Conclusions, 380
  - References, 380

### **22 On Sooner and Later Problems Between Success and Failure Runs**

*Sigeo Aki*

**385**

- 22.1 Introduction, 385
- 22.2 Number of Occurrences of the Sooner Event Until the Later Waiting Time, 387
- 22.3 Joint Distribution of Numbers of Runs, 397
  - References, 399

<b>23 Distributions of Numbers of Success-Runs Until the First Consecutive <math>k</math> Successes in Higher Order Markov Dependent Trials</b>	
<i>Katuomi Hirano, Sigeo Aki and Masayuki Uchida</i>	<b>401</b>
23.1 Introduction, 401	
23.2 Numbers of Success-Runs in Higher Order Markov Chain, 403	
23.3 Case $l < m$ , 408	
References, 409	
<b>24 On Multivariate Distributions of Various Orders Obtained by Waiting for the <math>r</math>-th Success Run of Length <math>k</math> in Trials With Multiple Outcomes</b>	
<i>Demetrios L. Antzoulakos and Andreas N. Philippou</i>	<b>411</b>
24.1 Introduction, 412	
24.2 Independent Trials, 413	
24.3 Generalized Sequence of Order $k$ , 420	
References, 423	
<b>25 A Multivariate Negative Binomial Distribution of Order <math>k</math> Arising When Success Runs are Allowed to Overlap</b>	
<i>Gregory A. Tripsiannis and Andreas N. Philippou</i>	<b>427</b>
25.1 Introduction, 427	
25.2 Multivariate Negative Binomial Distribution of Order $k$ , Type III, 429	
25.3 Characteristics and Distributional Properties of $\overline{MNB}_{k,III}(r; q_1, \dots, q_m)$ , 431	
References, 436	
<b>PART VI—APPLICATIONS TO DISTRIBUTION THEORY</b>	
<b>26 The Joint Energy Distributions of the Bose-Einstein and of the Fermi-Dirac Particles</b>	
<i>I. Vincze and R. Törös</i>	<b>441</b>
26.1 Introduction, 441	
26.2 Derivation of the Joint Distribution and of the Joint Entropy, 442	
26.2.1 On the method, 442	
26.2.2 Joint distribution of the number of particles in energy intervals, 444	
26.3 Determination of the Limit Distributions, 447	
26.4 Discussion, 448	

References, 449

**27 On Modified  $q$ -Bessel Functions and Some Statistical Applications** **451**  
*A. W. Kemp*

- 27.1 Introduction, 451
- 27.2 Notation, 453
- 27.3 The Distribution of the Difference of Two Euler Random Variables, 456
- 27.4 The Distribution of the Difference of Two Heine Random Variables, 458
- 27.5 Comments on the Distribution of the Difference of Two Generalized Euler Random Variables, 460  
References, 462

**28 A  $q$ -Logarithmic Distribution** **465**  
*C. David Kemp*

- 28.1 Introduction, 465
- 28.2 A  $q$ -Logarithmic Distribution, 467
- 28.3 A Group Size Model for the Distribution, 469  
References, 470

**29 Bernoulli Learning Models: Uppuluri Numbers** **471**  
*K. G. Janardan*

- 29.1 Introduction, 471
- 29.2 The General Model, 472
  - 29.2.1 Special cases of the general probabilistic model, 474
- 29.3 Waiting Time Learning Models, 476
  - 29.3.1 Special cases of waiting time learning models, 478
- References, 480

PART VII—APPLICATIONS TO NONPARAMETRIC STATISTICS

**30 Linear Nonparametric Tests Against Restricted Alternatives: The Simple-Tree Order and The Simple Order** **483**  
*S. Chakraborti and W. Schaafsma*

- 30.1 Introduction, 484
- 30.2 Background, 485
- 30.3 Objectives, 486
- 30.4 Exploration and Reformulation, 487
- 30.5 Test for the Simple-Tree Problem, 487
  - 30.5.1 Some particular cases, 490
  - 30.5.2 Derivation of the MSSMP test, 493

30.6	Test for the Simple Order Problem, 496	
30.6.1	Derivation of the (A)MSSMP test, 497	
30.6.2	Power comparisons, 499	
30.7	Extending the Class of SMP Tests, 501	
	Appendix, 503	
	References, 505	
<b>31</b>	<b>Nonparametric Estimation of the Ratio of Variance Components</b>	
	<i>M. Mahibbur Rahman and Z. Govindarajulu</i>	<b>507</b>
31.1	Introduction, 507	
31.2	Proposed Estimation Procedure, 510	
31.3	Monte Carlo Comparison, 512	
31.4	Adjustment for Bias, 514	
	References, 515	
<b>32</b>	<b>Limit Theorems for M-Processes Via Rank Statistics Processes</b>	
	<i>M. Hušková</i>	<b>521</b>
32.1	Introduction, 521	
32.2	Case $\theta_1 = \dots = \theta_n$ , 522	
32.3	Change Point Alternatives, 526	
	References, 533	
	<b>Author Index</b>	<b>535</b>
	<b>Subject Index</b>	<b>545</b>
