

## Contents

G. WILDENHAIN	
Introduction .....	ix
I. GOHBERG	
Vladimir Maz'ya: Friend and mathematician. Recollections .....	1
L. I. HEDBERG	
On Maz'ya's work in potential theory and the theory of function spaces .....	7
1. <i>Introduction</i> .....	7
2. <i>Embeddings and isoperimetric inequalities</i> .....	7
3. <i>Regularity of solutions</i> .....	10
4. <i>Boundary regularity</i> .....	11
5. <i>Nonlinear potential theory</i> .....	12
N. G. KUZNETSOV and B. R. VAINBERG	
Maz'ya's works in the linear theory of water waves .....	17
1. <i>Introduction</i> .....	17
2. <i>The unique solvability of the water wave problem</i> .....	18
3. <i>The Neumann-Kelvin problem</i> .....	25
4. <i>Asymptotic expansions for transient water waves due to brief and high-frequency disturbances</i> .....	28
J. ELSCHNER	
Maz'ya's work on integral and pseudodifferential operators .....	35
1. <i>Non-elliptic operators</i> .....	35
2. <i>Oblique derivative problem: breakthrough in the generic case of degeneration</i> .....	37
3. <i>Estimates for differential operators in the half-space</i> .....	39
4. <i>The characteristic Cauchy problem for hyperbolic equations</i> .....	40
5. <i>New methods for solving ill-posed boundary value problems</i> .....	42
6. <i>Applications of multiplier theory to integral operators</i> .....	42
7. <i>Integral equations of harmonic potential theory on general non-regular surfaces</i> .....	43
8. <i>Boundary integral equations on piecewise smooth surfaces</i> .....	45
J. ROSSMANN	
Contributions of V. Maz'ya to the theory of boundary value problems in nonsmooth domains .....	53
1. <i>Maz'ya's early work on boundary value problems in nonsmooth domains</i> .....	54

2. General elliptic boundary value problems in domains with point singularities .....	65
3. Boundary value problems in domains with edges .....	77
4. Spectral properties of operator pencils generated by elliptic boundary value problems in a cone .....	83
5. Applications to elastostatics and hydrodynamics .....	86
6. Singularities of solutions to nonlinear elliptic equations at a cone vertex .....	91
 V. HAVIN	
On some potential theoretic themes in function theory .....	99
1. Approximation theory .....	99
2. Uniqueness properties of analytic functions .....	103
3. The Cauchy problem for the Laplace equation .....	105
 G. SCHMIDT	
Approximate approximations and their applications .....	111
1. Introduction .....	111
2. Quasi-interpolation .....	113
3. Generating functions for quasi-interpolation of high order .....	117
4. Semi-analytic cubature formulas .....	120
5. Cubature of integral operators over bounded domains .....	122
6. Approximate wavelets .....	126
7. Numerical algorithms based upon approximate approximations .....	130
 R. COOKE	
Maz'ya's work on the biography of Hadamard .....	137
 A. GRIGORYAN	
Isoperimetric inequalities and capacities on Riemannian manifolds .....	139
1. Introduction .....	139
2. Capacity of balls .....	141
3. Parabolicity of manifolds .....	143
4. Isoperimetric inequality and Sobolev inequality .....	145
5. Capacity and the principal frequency .....	145
6. Cheeger's inequality .....	147
7. Eigenvalues of balls on spherically symmetric manifolds .....	148
8. Heat kernel on spherically symmetric manifolds .....	149
 T. SHAPOSHNIKOVA	
Multipliers of differentiable functions and their traces .....	155
1. Introduction .....	155
2. Description and properties of multipliers .....	156
3. Multipliers in the space of Bessel potentials as traces of multipliers .....	162

V. A. KOZLOV	
An asymptotic theory of nonlinear abstract higher order ordinary differential equations .....	171
S. POBORCHI	
Sobolev spaces for domains with cusps .....	175
1. <i>Introduction</i> .....	175
2. <i>Extension theorems</i> .....	176
3. <i>Embedding theorems</i> .....	179
4. <i>Boundary values of Sobolev functions</i> .....	181
V. BURENKOV	
Extension theorems for Sobolev spaces .....	187
1. <i>Introduction</i> .....	187
2. <i>Extensions with preservation of class</i> .....	188
3. <i>Estimates for the minimal norm of an extension operator</i> .....	190
4. <i>Extensions with deterioration of class</i> .....	193
A. MOVCHAN	
Contributions of V.G. Maz'ya to analysis of singularly perturbed boundary value problems .....	201
1. <i>Introduction</i> .....	201
2. <i>Domain with a small hole</i> .....	202
3. <i>General asymptotic theory by Maz'ya, Nazarov and Plamenevskii</i> .....	206
4. <i>Asymptotics of solutions of boundary integral equations under a small perturbation of a corner</i> .....	207
5. <i>Compound asymptotics for homogenization problems</i> .....	208
6. <i>Boundary value problems in 3D-1D multi-structures</i> .....	210
J. ÅSLUND	
Asymptotic analysis of a mixed boundary value problem in a singularly degenerating domain .....	213
1. <i>Introduction</i> .....	213
2. <i>Formulation of the problem</i> .....	213
3. <i>The leading order approximation</i> .....	215
A. KOZHEVNIKOV	
A history of the Cosserat spectrum .....	223
1. <i>Introduction</i> .....	223
2. <i>The first boundary value problem of elastostatics</i> .....	224
3. <i>The second and other boundary-value problems</i> .....	227
4. <i>Applications and other related results</i> .....	230

A. SOLOVIEV	
Boundary integral equations for plane domains with cusps .....	235
1. <i>Introduction</i> .....	235
2. <i>Integral equations in weighted Sobolev spaces</i> .....	237
S. EILERTSEN	
On Maz'ya type inequalities for convolution operators .....	243
1. <i>Introduction</i> .....	243
2. <i>One-dimensional polynomials</i> .....	244
3. <i>The functions <math> x ^{2\lambda}</math> in <math>\mathbb{R}^n</math></i> .....	246
G. KRESIN	
Sharp constants and maximum principles for elliptic and parabolic systems with continuous boundary data .....	249
1. <i>The norm and the essential norm of the double layer elastic and hydrodynamic potentials in the space of continuous functions</i> .....	253
2. <i>Exact constants in inequalities of maximum principle type for certain systems and equations of mathematical physics</i> .....	264
3. <i>Maximum modulus principle for elliptic systems</i> .....	270
4. <i>Maximum modulus principle for parabolic systems</i> .....	278
5. <i>Maximum norm principle for parabolic systems</i> .....	287
M. LANGER	
$L^p$ -contractivity of semigroups generated by parabolic matrix differential operators .....	307
1. <i>Introduction</i> .....	307
2. <i>Preliminaries</i> .....	310
3. <i>Weakly coupled systems</i> .....	311
4. <i>Coupled systems</i> .....	322
Curriculum vitae of Vladimir Maz'ya .....	331
Publications of Vladimir Maz'ya .....	335
