

## Table of Contents

<i>E.L. Basor, E.M. Landesman</i>	
<b>Biography of H. Widom</b> . . . . .	ix
<i>I. Kaplansky</i>	
<b>To Harold Widom on his 60th birthday</b> . . . . .	xii
<b>Harold Widom's Publications</b> . . . . .	xv
<i>H. Widom</i>	
<b>Eigenvalue distribution for nonselfadjoint Toeplitz matrices</b> . . . . .	1
<i>H. Widom</i>	
<b>Random Hermitian matrices and (nonrandom) Toeplitz matrices</b> . . . . .	9
<i>E.L. Basor, K.E. Morrison</i>	
<b>The extended Fisher-Hartwig conjecture for symbols with multiple jump discontinuities</b> . . . . .	16
1. Introduction . . . . .	16
2. Localization theory for $-1 < Re\beta_\tau < 0$ . . . . .	18
3. Some special cases . . . . .	24
References . . . . .	28
<i>H. Bercovici, C. Foias, A. Tannenbaum</i>	
<b>A relative Toeplitz-Hausdorff theorem</b> . . . . .	29
<i>A. Böttcher, B. Silbermann</i>	
<b>Operator-valued Szegő-Widom limit theorems</b> . . . . .	33
1. Introduction . . . . .	33
2. Toeplitz and Hankel operators with operator-valued symbols . . . . .	34
3. Finite section method . . . . .	36
4. The first Szegő-Widom limit theorem . . . . .	38
5. The strong Szegő-Widom limit theorem . . . . .	44
6. Continuous symbols . . . . .	49
References . . . . .	52

**The Adamjan-Arov-Krein theorem in general and regular**

<b>representations of <math>\mathbf{R}^2</math> and the symplectic plane</b> . . . . .	54
Introduction . . . . .	54
1. Hankel forms in discrete and continuous evolution systems . . . . .	56
2. The A-A-K theorem in general and regular representations of $\mathbf{R}$ . . . . .	61
3. The A-A-K theorem for general representations of $\mathbf{R}^2$ and $(\mathbf{R}^2, [ , ])$ . . . . .	63
4. A-A-K theorems in the regular representation of $\mathbf{R}^2$ . . . . .	68
5. The A-A-K theorem in the regular representation of the symplectic plane . . . . .	71
References . . . . .	77

*I. Gohberg, M.A. Kaashoek*

**Projection method for block Toeplitz operators with operator-valued symbols** . . . . .

0. Introduction . . . . .	79
1. Projection method for compressions . . . . .	81
2. Applications of block Toeplitz operators with operator-valued symbols . . . . .	87
3. Projection method with two directions . . . . .	91
4. The projection method for block pair operators . . . . .	95
5. The theorem for the non-Toeplitz case . . . . .	100
References . . . . .	104

*I. Gohberg, N. Krupnik*

**Szegö-Widom-type limit theorems** . . . . .

1. Introduction . . . . .	105
2. The main results . . . . .	108
3. Limit theorems for the algebra $\mathbf{K}_N^{m \times m}$ . . . . .	111
4. Illustrative examples . . . . .	115
5. Proofs of theorems 2.1, 2.2 . . . . .	118
References . . . . .	120

*Y. Karlovich, I. Spitkovsky*

**(Semi)-Fredholmness of convolution operators on the spaces of Bessel potentials** . . . . .

1. Introduction . . . . .	122
2. Main results . . . . .	125
3. Auxiliary results . . . . .	130
4. Operators $W_{K,\omega}$ . . . . .	139
5. Invertibility and factorability of local representatives . . . . .	145
References . . . . .	150

<b>Kernels of Toeplitz operators</b> . . . . .	153
1. Introduction . . . . .	153
2. De Branges-Rovnyak spaces . . . . .	155
3. Hitt's theorem . . . . .	158
4. Hayashi's theorem . . . . .	160
5. Rigid functions . . . . .	163
References . . . . .	163

<b>A fixed point approach to Nehari's problem and its applications</b> . . . . .	165
1. Abstract Nehari's theorem . . . . .	165
2. Main examples and corollaries . . . . .	167
3. Iokhvidov-Ky Fan theorem and some of its applications: A generalized AAK theorem . . . . .	172
4. Proof of the generalized Nehari's theorem . . . . .	176
5. Proof of the Iokhvidov-Ky Fan theorem . . . . .	182
References . . . . .	185
