Foreword	ix
Chapter 1. Finiteness Problems in Differential Equations and Diophantine Geometry D. SCHLOMIUK	1
References	8
Chapter 2. Linear Differential Equations, Fuchsian Inequalities and Multiplicities of Zeros A. A. BOLIBRUKH	11
1. Introduction	11
2. Systems with regular singular points	12
3. Irregular singular points	22
4. Fuchsian inequalities	28
5. Multiplicities of zeroes	34
References	38
Chapter 3. Quantitative Theory of Ordinary Differential Equations and the Tangential Hilbert 16th Problem SERGEI YAKOVENKO	41
1. Hilbert 16th problem: Limit cycles, cyclicity, Abelian integrals	41
2. Abelian integrals and differential equations	59
3. Quasialgebraicity of function fields	71
4. Quantitative theory of differential equations	82
5. Isomonodromic reduction principle and the Riemann – Hilbert problem	95
References	106
Chapter 4. Around the Hilbert – Arnol'd Problem V. KALOSHIN	111
1. Around the Hilbert's 16th problem and an estimate for cyclicity of elementary polycycles	111
2. Normal forms and the Khovanskiĭ method	123
3. Stratifications and Bézout's theorem for chain maps	134
4. Bifurcation of spatial polycycles and blow-up along the diagonal of the space of multijets	146
References	158
Chapter 5. Finiteness Results in Differential Algebraic Geometry and Diophantine Geometry ALEXANDRU BUIUM	163
1. Finiteness results in Diophantine geometry	163

2. Finiteness results in differential algebraic geometry	168
3. Discussion of the proofs	170
Conclusion	173
References	174
Appendix A. Abstract: $\mathfrak{o}$ -Minimal Structures, Real Analytic Geometry, and Transseries L. VAN DEN DRIES	175
Appendix B. List of Lectures Delivered at the Workshop	177
Appendix C. Photographs of Some Workshop Participants	179
Appendix D. List of Participants	181
