Preface	xi
Part I General surveys	
Localizations	3
<i>W. G. Dwyer</i>	
1 Introduction	3
2 Algebra	7
3 Homological localization in topology	10
4 Localization with respect to a map	13
5 Colocalization with respect to an object	20
6 Higher invariants of localization	22
7 Constructing localizations and colocalizations	24
References	26
Generalised sheaf cohomology theories	29
<i>J.F. Jardine</i>	
1 Simplicial presheaves	30
2 Presheaves of spectra	43
3 Profinite groups	51
4 Generalised Galois cohomology theory	55
5 Thomason's descent theorem	62
References	66
Axiomatic stable homotopy	69
<i>N. P. Strickland</i>	
1 Introduction	69
2 Axioms	72
3 Functors on small objects	80
4 Types of subcategories	80
5 Quotient categories and Bousfield localisation	84
6 Versions of the Bousfield lattice	85
7 Special types of localisation	87
8 Nilpotence	89
9 Brown representability	91

References	94
Part II Special surveys	
(Pre-)sheaves of Ring Spectra over the Moduli Stack of Formal Group Laws	101
<i>Paul G. Goerss</i>	
1 The Realization Problem	102
2 Moduli Spaces and Obstruction Theory	116
References	129
Operads and cosimplicial objects: an introduction	133
<i>James E. McClure, Jeffrey H. Smith</i>	
1 Introduction	133
2 Loop spaces and the little intervals operad	135
3 Cosimplicial objects and totalization	140
4 A sufficient condition for $\text{Tot}(X^\bullet)$ to be an A_∞ space	143
5 A reformulation	146
6 Operads	147
7 A family of cochain operations	149
8 A sufficient condition for $\text{Tot}(X^\bullet)$ to be an E_∞ space	151
9 The little n -cubes operad	154
10 A sufficient condition for $\text{Tot}(X^\bullet)$ to be an E_n space	157
11 An extension of Remark 6.3(b)	159
12 Proof of Theorem 10.6	161
13 Applications	162
14 The framed little disks operad	163
15 Cosimplicial chain complexes	165
16 Applications	168
References	169
From HAG to DAG: derived moduli stacks	173
<i>Bertrand Toën, Gabriele Vezzosi</i>	
1 Introduction	174
2 The model category of D -stacks	182
3 First examples of D -stacks	189
4 The geometry of D -stacks	196
5 Further examples	206
References	214
Part III Motivic homotopy theory	
On the motivic π_0 of the sphere spectrum	219
<i>Fabien Morel</i>	
1 Introduction: homotopy theory and differential topology	219
2 From smooth varieties to “spaces”	225

3	Stable homotopy categories of S^1 -spectra	231
4	The \mathbb{A}^1 -homotopy t-structure and the stable Hurewicz theorem	236
5	Inverting \mathbb{P}^1	243
6	$\pi_0(S^0)$ and Milnor-Witt K theory of fields	251
References		259
Riemann-Roch Theorems for oriented cohomology		261
<i>I. Panin (after I. Panin and A. Smirnov)</i>		
0	Introduction	261
1	Oriented cohomology pretheories	266
2	Riemann-Roch type theorems	294
References		330
Equivariant Motivic Phenomena		335
<i>Victor Snaith</i>		
1	Introduction	335
2	Classical Motives	336
3	Equivariant Motives	341
4	The Gross-Stark Conjecture	352
5	The fractional ideal \mathcal{J}_F^r	354
6	New Conjectures	359
7	Supporting evidence	361
8	Annihilators and $K_0(\mathbf{Z}[G], \mathbf{Q}_l)$	364
9	The Lichtenbaum conjecture	371
10	Relation to Vandiver's Conjecture	376
References		379
A Road Map of motivic homotopy and homology theory		385
<i>Charles Weibel</i>		
1	The road map	385
2	Motivic Homotopy Theory	388
3	Motivic Homology Theory	388
4	Stable Motivic Complexes	389
5	The Hurewicz functor	390
References		392
