SURVEYS

| | |
|--|-----|
| I. BÁRÁNY, S. ONN, Carathéodory's theorem, colourful and applicable | 11 |
| P. GOODEY, R. SCHNEIDER, W. WEIL, Projection functions of convex bodies | 23 |
| Y. S. KUPITZ, H. MARTINI, Geometric aspects of the generalized Fermat–Torricelli problem | 55 |
| M. LASSAK, A survey of algorithms for on-line packing and covering by sequences of convex bodies | 129 |
| P. MCMULLEN, Polytope algebras, tensor weights and piecewise polynomials | 159 |
| F. SHAHROKHI, O. SÝKORA, L. SZÉKELY, I. VRŤO, Crossing numbers: bounds and applications | 179 |
| L. SZABÓ, Recent results on illumination problems | 207 |
| J. WILLS, Sphere packings, lattices and crystals | 223 |

RESEARCH PAPERS

| | |
|--|-----|
| A. BEZDEK, On the Hadwiger number of a starlike set | 237 |
| K. BÖRÖCZKY, Closeness and least tight (or friendly) systems of points on the 2-sphere | 247 |
| K. BÖRÖCZKY JR, Packings of four and five balls | 265 |
| P. BRASS, On the maximum number of unit distances among n points in dimension four | 277 |
| B. CSIKÓS, On the Hadwiger–Kneser–Poulsen conjecture | 291 |

| | |
|--|-----|
| GY. CSIZMADIA, D. ISMAILESCU, Maximum number of different distance counts | 301 |
| S. DRAGAN, S. REVENKO, V. SOLTAN, On Gallai's problem for congruent circles | 311 |
| Z. FÜREDI, The expected size of a random sphere-of-influence graph | 319 |
| Á. G. HORVÁTH, Dissections of a centrally symmetric hexagon | 327 |
| J. E. GOODMAN, R. POLLACK, Lifting lines to hyperplanes | 335 |
| E. GYÖRI, Coverings of arbitrary rectilinear regions by rectangles ... | 339 |
| A. HEPPES, A note on the shortest partitioning nets on the 2-sphere | 347 |
| A. HEPPES, G. KERTÉSZ, Packings circles of two different sizes on the sphere | 357 |
| GY. KÁROLYI, J. PACH, G. TARDOS, G. TÓTH, An algorithm for finding many disjoint monochromatic edges in a complete 2-colored graph | 367 |
| A. KEMNITZ, M. MÖLLER, On the Newton number of rectangles | 373 |
| A. E. KÉZDY, G. KUBICKI, K_{12} is not a closed sphere-of-influence graph | 383 |
| W. KUPERBERG, Tiling the solid torus, the 3-cube and the 3-sphere with congruent knotted tori | 399 |
| J. MATOUŠEK, P. VALTR, The complexity of the lower envelope of segments with h endpoints | 407 |
| H. STACHEL, A family of multiply decomposable Euclidean motions . | 413 |
| I. TALATA, Covering the lattice points of a convex body with affine subspaces | 429 |
| P. VALTR, Catalan numbers via random planar point sets | 441 |
