Foreword	ix
Preface	xi

## Part I. Invited Research Talks

Chain decomposition theorems for ordered sets and other musings JONATHAN DAVID FARLEY	3
Unimodality and the independent set numbers of matroids CAROLYN R. MAHONEY	15
On achieving channels in a bipolar game CURTIS CLARK	23
Discrete approximation of invariant measures for multidimensional maps WALTER M. MILLER	29
Some numerical methods for a maximum entropy problem NATHANIEL WHITAKER	47
Hydrodynamic stability, differential operators and spectral theory ISOM H. HERRON	57
The role of Selberg's trace formula in the computation of Casimir energy for certain Clifford-Klein space-times FLOYD L. WILLIAMS	69
Some dynamics on the irrationals SCOTT W. WILLIAMS	83

## Part II. Poster Presentations

Finding elliptic curves defined over $Q$ of high rank GARIKAI CAMPBELL	107
Symplectic matrix structure in numerical integration MICHAEL KEEVE	111
A numerical algorithm for the computation of invariant circles KOSSI EDOH	117

Classification of nilpotent orbits in symmetric spaces ALFRED G. NOËL	123
Evaluating texture measures for low-level features in color images of human skin KORI E. NEEDHAM	129
Lattice paths and RNA secondary structures ASAMOAH NKWANTA	137
Nuprl as a concurrent interactive theorem prover RODERICK MOTEN	149

### Part III. Historical Articles

Yesterday, today and tomorrow LEE LORCH	157
The challenge of diversity ETTA Z. FALCONER	169
What next? A meta-history of black mathematicians PATRICIA CLARK KENSCHAFT	183
A personal history of the origins of the National Association of Mathematicians' "Presentations by Recipients of Recent Ph.D.'s" DONALD M. HILL	187
Dr. J. Ernest Wilkins, Jr.: The man and his works NKECHI AGWU AND ASAMOAH NKWANTA	195
