

Table of Contents of Volume I

Speeches

Address by J.-P. Bourgignon	ix
Address by G. Demszky	xi
Address by A. Goncz	xii
Address by G. Katona	xiii
List of talks	xv
Prizes of the European Mathematical Society	xvii

Contributions

<i>N. Alon</i>	
Randomness and pseudo-randomness in discrete mathematics	1
<i>L. Ambrosio</i>	
Free discontinuity problems and special functions with bounded variation	15
<i>K. Astala</i>	
Recent connections and applications of planar quasiconformal mappings	36
<i>R. Benedetti</i>	
A combinatorial approach to combings and framings of 3-manifolds	52
<i>Ch. Bessenrodt</i>	
Algebra and combinatorics	64
<i>F. Bethuel</i>	
Some recent results for the Ginzburg-Landau equation	92
<i>P. Bjørstad</i>	
Mathematics, parallel computing and reservoir simulation	100
<i>E. Bolthausen</i>	
Large deviations and perturbations of random walks and random surfaces	108
<i>J. Bricmont, A. Kupiainen</i>	
Renormalization group for fronts and patterns	121

<i>D. Burago</i>	
Geometry of tori: Riemannian versus Finsler?	131
<i>L. Caporaso</i>	
Counting curves on surfaces: A guide to new techniques and results	136
<i>U. Dierkes</i>	
Minimal surfaces in singular spaces	150
<i>I. Dynnikov</i>	
Surfaces in 3-torus: Geometry of plane sections	162
<i>L.H. Eliasson</i>	
One-dimensional quasi-periodic Schrödinger operators – dynamical systems and spectral theory	178
<i>W.T. Gowers</i>	
Banach spaces with few operators	191
<i>H. Hedenmalm</i>	
Recent developments in the function of the Bergman space	202
<i>A. Huber</i>	
Extensions of motives	218
<i>J. Kaczorowski</i>	
Boundary values of Dirichlet series and the distribution of primes	237
<i>J. Kollár</i>	
Low degree polynomial equations: Arithmetic, geometry and topology	255
<i>D.O. Kramkov, A.N. Shiryayev</i>	
Sufficient conditions of the uniform integrability of exponential martingales	289
<i>C. Lescop</i>	
On the Casson invariant	296
<i>R. März</i>	
EXTRA-ordinary differential equations: Attempts to an analysis of differential-algebraic systems	313

Table of Contents of Volume II

Contributions (continued)

<i>J. Matousek</i>	
Geometric set systems	1
<i>D. McDuff</i>	
Recent developments in symplectic topology	28
<i>A.S. Merkurjev</i>	
K-theory and algebraic groups	43
<i>V. Milman</i>	
Surprising geometric phenomena in high-dimensional convexity theory	73
<i>St. Müller</i>	
Microstructures, phase transition and geometry	92
<i>T. Nowicki</i>	
Different types of non-uniform hyperbolicity for interval maps are equivalent	116
<i>E. Olivieri, E. Scoppola</i>	
Metastability and typical exit paths in stochastic dynamics	124
<i>V.P. Platonov</i>	
Rationality problems for group varieties	151
<i>L. Polterovich</i>	
Precise measurements in symplectic topology	159
<i>J. Pöschel</i>	
Nonlinear partial differential equations, Birkhoff normal forms, and KAM theory	167
<i>L. Pyber</i>	
Group enumeration and where it leads us	187
<i>N. Simányi</i>	
Studying dynamical systems with algebraic tools	200
<i>J.P. Solovej</i>	
Mathematical results on the structure of large atoms	211
<i>A. Stipsicz</i>	
Geography of irreducible 4-manifolds	221

<i>G. Tardos</i>	
Transversals of d -intervals – comparing three approaches	234
<i>J.-P. Tignol</i>	
Algebras with involution and classical groups	244
<i>A.P. Veselov</i>	
Huygens' principle and integrability	259
<i>E. Zuazua</i>	
Some problems and results on the controllability of partial differential equations	276
Round Tables	
(A) Electronic literature in mathematics	
<i>B. Wegner (chair); A. DeKemp, A. Bardelloni, J.-P. Allouche</i>	315
(B) Mathematical Games	
<i>D. Singmaster (chair); A. Fraenkel, M.E. Larsen, T. Szentiványi</i>	338
(D) Women and mathematics	
<i>K. Hag (chair); S. Paycha, R. Piene, D. McDuff, R. März</i>	347
(E) Public image of mathematics	
<i>R. Bulirsch (chair); M. Chaleyat-Maurel, Gy. Staar,</i> <i>St. Deligeorges</i>	376
(G) Education	
<i>V.L. Hansen (chair); Ch. Mauduit, J.-P. Boudine,</i> <i>M. Laczovich, L. Pósa</i>	380
