

CONTENTS

Foreword	v
Preface	vii

MODELS AND MECHANISMS IN PARALLEL COMPUTATION

A general-purpose shared-memory model for parallel computation	1
<i>Vijaya Ramachandran</i>	
Supporting a coherent shared address space across SMP nodes: An application-driven investigation	19
<i>Angelos Bilas, Liviu Iftode, Rudrajit Samanta, and Jaswinder Pal Singh</i>	
Single-message vs. batch communication	61
<i>Mark W. Goudreau and Satish B. Rao</i>	
Some simple and practical strategies for parallelism	75
<i>Nicholas Carriero and David Gelernter</i>	

DISCRETE AND COMBINATORIAL ALGORITHMS

Locality in computing connected components	89
<i>Abhiram Ranade</i>	
Routing in optical and wireless networks	101
<i>Eric J. Schwabe</i>	
Transparent parallel transactions on replicated autonomous databases	117
<i>Rekha Goel and Gautam M. Shroff</i>	

MATHEMATICS OF PARALLELIZING COMPILERS

Mathematical tools for loop transformations: From systems of uniform recurrence equations to the polytope model	147
<i>Alain Darté</i>	

NUMERICAL ALGORITHMS

- The scalability of mesh improvement algorithms..... 185
Lori A. Freitag, Mark T. Jones, and Paul E. Plassmann
- Data parallel performance optimizations using array aliasing..... 213
Y. Charlie Hu and S. Lennart Johnsson
- Coarsening, sampling, and smoothing: Elements of the
 multilevel method..... 247
Shang-Hua Teng
- Some methods of parallel pseudorandom number generation..... 277
Michael Mascagni
- Performance of parallel sparse triangular solution..... 289
Michael T. Heath and Padma Raghavan
- Determining an out-of-core FFT decomposition strategy
 for parallel disks by dynamic programming..... 307
Thomas H. Cormen

PARALLEL COMPUTER SYSTEMS AND SOFTWARE

- Enabling department-scale supercomputing..... 321
David S. Greenberg, William E. Hart, and Cynthia A. Phillips
- Providing uniform dynamic access to numerical software..... 345
Henri Casanova and Jack Dongarra
