

CONTENTS

Paolo ALUFFI — Weighted Chern-Mather classes and Milnor classes of hypersurfaces	1
Vincent BLANLOEIL — Cobordism of non-spherical knots	21
Jean-Paul BRASSELET — From Chern classes to Milnor classes — A history of characteristic classes for singular varieties	31
Jean-Paul BRASSELET and Shoji YOKURA — Remarks on bivariant constructible functions	53
Joël BRIANÇON, Philippe MAISONOBE et Michel MERLE — Constructibilité de l'idéal de Bernstein	79
Antonio CAMPILLO and Jorge OLIVARES — Assigned base conditions and geometry of foliations on the projective plane	97
Gerard GONZALEZ-SPRINBERG — Generalized Enriques diagrams and characteristic cones	115
Shihoko ISHII — The quotients of log-canonical singularities by finite groups	135
LÊ Dũng Tráng — Geometry of complex surface singularities	163
Daniel LEHMANN — A Chern-Weil theory for Milnor classes	181
François LOESER — The Milnor fiber as a virtual motive	203
Isao NAKAI — Elementary topology of stratified mappings	221
Mutsuo OKA — Geometry of cuspidal sextics and their dual curves	245
Tatsuo SUWA — Characteristic classes of coherent sheaves on singular varieties	279
Hiro-o TOKUNAGA — Local types of singularities of plane curves and the topology of their complements	299
Program	317
List of participants	319
