

TABLE DES MATIERES

R.M. DUDLEY : "A COURSE ON EMPIRICAL PROCESSES"

<u>PREFACE</u>	2
<u>CHAPITRE 1 - INTRODUCTION</u>	
1.1 Invariance principles	6
1.2 Construction of joint distributions	8
<u>CHAPITRE 2 - EMPIRICAL PROCESSES, GAUSSIAN LIMITS AND INEQUALITIES</u>	
2.1 Gaussian limit processes	11
2.2 Inequalities	13
<u>CHAPITRE 3 - MEASURABILITY AND SUMS IN GENERAL BANACH SPACES</u>	
3.1 Measurable cover functions and norms	17
3.2 Independent random elements and partial sums	20
3.3 A central limit theorem implies measurability in separable Banach spaces	24
<u>CHAPITRE 4 - ASYMPTOTIC EQUICONTINUITY AND LIMIT THEOREMS</u>	
4.1 A characterization of functional Donsker classes	27
4.2 Strong invariance principles	32
<u>CHAPITRE 5 - SEQUENCES OF SETS AND FUNCTIONS</u>	
5.1 Sequences of sets	34
5.2 Sequences of functions	37
<u>CHAPITRE 6 - METRIC ENTROPY, WITH INCLUSION AND BRACKETING</u>	
6.0 Metric entropy and capacity	39
6.1 Definitions and the Blum-DeHardt law of large numbers	40
6.2 A central limit theorem for sets or bounded functions	44
6.3 The power set of a countable set : BORISOV-DURST theorem	47
6.4 Central limit theorems for classes of unbounded functions	49
<u>CHAPITRE 7 - APPROXIMATION OF FUNCTIONS AND SETS</u>	
7.0 Introduction ; the Hausdorff metric	50
7.1 Spaces of differentiable functions and sets with differentiable boundaries	51
7.2 Lower layers	57
7.3 Metric entropy of classes of convex sets	62

CHAPITRE 8 - CLASSES OF SETS OR FUNCTIONS TOO LARGE FOR CENTRALLIMIT THEOREMS

8.1	Universal lower bounds	68
8.2	An upper bound	70
8.3	Poissonization and random sets	72
8.4	Lower bounds in borderline cases	76

CHAPITRE 9 - VAPNIK-CERVONENKIS CLASSES

9.1	Introduction	81
9.2	Generation of classes and evaluation of $S(\mathcal{C})$	84
9.3	Vapnik-Cervonenkis classes, independence and probability laws	91

CHAPITRE 10 - MEASURABILITY CONSIDERATIONS

10.1	Sufficiency	94
10.2	Admissibility	97
10.3	Suslin properties, selection and a counter-example	100

CHAPITRE 11 - LIMIT THEOREMS ON VAPNIK-CERVONENKIS CLASSES AND USINGKOLCINSKII-POLLARD ENTROPY

11.1	Kolčinskii-Pollard entropy and Glivenko-Cantelli theorems	105
11.2	Vapnik-Cervonenkis-Steele laws of large numbers	111
11.3	Pollard's central limit theorem	117
11.4	Necessary conditions for limit theorems	125

CHAPITRE 12 - NON-PARAMETRIC STATISTICS AND SPEEDS OF CONVERGENCE

12.1	Non-parametric statistics	128
12.2	Speeds of convergence in central limit theorems	129

INDEX OF NOTATION AND TERMINOLOGY

131

H. KUNITA : "STOCHASTIC DIFFERENTIAL EQUATIONS AND STOCHASTIC FLOW
OF DIFFEOMORPHISMS"

INTRODUCTION

144

CHAPITRE I - STOCHASTIC CALCULUS FOR CONTINUOUS SEMIMARTINGALES

1. Preliminaries	149
2. Quadratic variations of continuous semimartingales	153
3. Continuity of quadratic variations in \underline{M}_c and \underline{M}_c^{loc}	160
4. Joint quadratic variations	163
5. Stochastic integrals	166
6. Stochastic integrals of vector valued processes	170
7. Regularity of integrals with respect to parameters	176
8. Itô's formula	183
9. Brownian motions and stochastic integrals	191
10. Appendix. Kolmogorov's theorem	195

CHAPITRE II - STOCHASTIC DIFFERENTIAL EQUATIONS AND STOCHASTIC FLOWS
OF HOMEOMORPHISMS

1. Stochastic differential equation with Lipschitz continuous coefficients	206
2. Continuity of the solution with respect to the initial data	210
3. Smoothness of the solution with respect to the initial data	218
4. Stochastic flow of homeomorphisms (I). Case of globally Lipschitz continuous coefficients	223
5. SDE with locally Lipschitz continuous coefficients	228
6. Stochastic flow of homeomorphisms (II). A necessary and sufficient condition	234
7. Stratonovich stochastic differential equations	238
8. Stochastic differential equations on manifold	243
9. Stochastic flow of homeomorphisms (III). Case of manifold	250

CHAPITRE III - DIFFERENTIAL GEOMETRIC ANALYSIS OF STOCHASTIC FLOWS

1. Itô's forward and backward formula for stochastic flows	255
2. Itô's formula for $\xi_{s,t}$ acting on vector fields	263
3. Composition and decomposition of the solution	268
4. Itô's formula for $\xi_{s,t}$ acting on tensor fields	276
5. Supports of stochastic flow of diffeomorphisms	281
6. Itô's formula for stochastic parallel displacement of tensor fields	287
7. Application to parabolic partial differential equations	294

F. LEDRAPPIER - "QUELQUES PROPRIETES DES EXPOSANTS CARACTERISTIQUES"

<u>PREFACE</u>	306
<u>CHAPITRE I - THEOREME ERGODIQUE MULTIPLICATIF D'OSSELEDETS</u>	
1. Exposants caractéristiques	308
2. Théorème ergodique sous-additif	311
3. Théorème ergodique multiplicatif	316
4. Cas inversible	323
5. Mesures invariantes	328
<u>CHAPITRE II - ENTROPIE ET EXPOSANTS</u>	
1. Entropie des systèmes dynamiques	330
2. Applications différentiables	333
3. Théorème de Shannon - Mc. Millan - Breiman	339
4. Minoration de la dimension	341
5. Exposants, entropie et dimension en dimension 2	347
6. Appendice au chapitre II : démonstration du lemme 5.5	355
<u>CHAPITRE III - FAMILLES INDEPENDANTES</u>	
1. La formule de Fürstenberg pour λ_1	357
2. Entropie d'un produit indépendant de matrices	362
3. Critère de Fürstenberg	367
4. Majoration de la dimension de la mesure invariante	372
5. Exposant, entropie et dimension en dimension 2	377
<u>CHAPITRE IV - EXEMPLES</u>	
1. Spectre singulier des opérateurs de Schrödinger aléatoires. L'argument de Pastour	382
2. Marche aléatoire sur \mathbf{Z} dans un milieu aléatoire	387
3. Appendice. Démonstration de la proposition 2.1	394
<u>REFERENCES GENERALES</u>	396
