Preface	xi
1 Introduction	1
1.1 Control Theory of Dynamical PDEs	1
1.1.1 Finite- versus infinite-dimensional control theory	2
1.1.2 Boundary/point control problems for single PDEs	2
1.1.3 Boundary/point control problems for systems of coupled PDEs	3
1.2 Goal of the Lectures	4
2 Well-Posedness of Second-Order Nonlinear Equations with Boundary Damping	7
2.1 Orientation	7
2.2 Abstract Model	8
2.3 Existence and Uniqueness: Statement of Main Results	9
2.4 Nonlinear Plates: von Karman Equations	13
2.4.1 Case $\gamma > 0$	15
2.4.2 Case $\gamma = 0$	19
2.5 Semilinear Wave Equation	21
2.6 Nonlinear Structural Acoustic Model	25
2.7 Full von Karman Systems	28
2.7.1 Model	28
2.7.2 Formulation of the results: Case $\gamma = 0$	32
2.7.3 Formulation of the results: Case $\gamma > 0$	34
2.8 Comments and Open Problems	37
3 Uniform Stabilizability of Nonlinear Waves and Plates	39
3.1 Orientation	39
3.2 Abstract Stabilization Inequalities	41
3.3 Semilinear Wave Equation with Nonlinear Boundary Damping	45
3.3.1 Formulation of the results	47
3.3.2 Regularization	51
3.3.3 Preliminary PDE inequalities	56
3.3.4 Absorption of the lower-order terms	61
3.3.5 Completion of the proof of the main theorem	66

3.4	Nonlinear Plate Equations	67
3.4.1	Modified von Karman equations	67
3.4.2	Full von Karman system and dynamic system of elasticity	72
3.4.3	Nonlinear plates with thermoelasticity	77
3.5	Comments and Open Problems	82
4	Uniform Stability of Structural Acoustic Models	85
4.1	Orientation	85
4.2	Internal Damping on the Wall	86
4.3	Boundary Damping on the Wall	90
4.3.1	Model	90
4.3.2	Formulation of the results	92
4.3.3	Preliminary multipliers estimates	97
4.3.4	Microanalysis estimate for the traces of solutions of Euler–Bernoulli equations and wave equations	101
4.3.5	Observability estimates for the structural acoustic problem	104
4.3.6	Completion of the proof of Theorem 4.3.1	109
4.4	Thermal Damping	110
4.4.1	Model	110
4.4.2	Statement of main results	112
4.4.3	Sharp trace regularity results	115
4.4.4	Uniform stabilization: Proof of Theorem 4.4.2	117
4.4.5	Wave equation	124
4.4.6	Uniform stability analysis for the coupled system	126
4.5	Comments and Open Problems	130
5	Structural Acoustic Control Problems: Semigroup and PDE Models	133
5.1	Orientation	133
5.2	Abstract Setting: Semigroup Formulation	135
5.3	PDE Models Illustrating the Abstract Wall Equation (5.2.2)	140
5.3.1	Plates and beams: Flat Γ_0	140
5.3.2	“Undamped” boundary conditions: $g \equiv 0$ in (5.3.10)	143
5.3.3	Boundary feedback: Case $g \neq 0$ in (5.3.10) and related stability	145
5.3.4	Shells: Curved-wall Γ_0	151
5.4	Stability in Linear Structural Acoustic Models	155
5.4.1	Internal damping on the wall	156
5.4.2	Boundary damping on the wall	158
5.5	Comments and Open Problems	160
6	Feedback Noise Control in Structural Acoustic Models: Finite Horizon Problems	163
6.1	Orientation	163
6.2	Optimal Control Problem	165
6.3	Formulation of the Results	167
6.3.1	Hyperbolic-parabolic coupling	167
6.3.2	Hyperbolic-hyperbolic coupling: General case	168

6.3.3	Hyperbolic-hyperbolic coupling: Special case of the Kirchhoff plate with point control	169
6.4	Abstract Optimal Control Problem: General Theory	174
6.4.1	Formulation of the abstract control problem	174
6.4.2	Characterization of the optimal control	175
6.4.3	Additional properties under the hyperbolic regularity assumption	177
6.4.4	DRE, feedback generator, and regularity of the gains B^*P, B^*r	179
6.5	Riccati Equations Subject to the Singular Estimate for $e^{At}B$	180
6.5.1	Formulation of the results	180
6.5.2	Proof of Lemma 6.5.1	181
6.5.3	Proof of Theorem 6.5.1	187
6.6	Back to Structural Acoustic Problems: Proofs of Theorems 6.3.1 and 6.3.2	190
6.6.1	Verification of Assumption (6.4.1)	192
6.6.2	Verification of Assumption 6.5.1	193
6.7	Comments and Open Problems	201
7	Feedback Noise Control in Structural Acoustic Models: Infinite Horizon Problems	203
7.1	Orientation	203
7.2	Optimal Control Problem	205
7.3	Formulation of the Results	206
7.3.1	Hyperbolic-parabolic coupling	206
7.3.2	Hyperbolic-hyperbolic coupling: Abstract results	208
7.3.3	Hyperbolic-hyperbolic coupling: Kirchhoff plate with point control	209
7.4	Abstract Optimal Control Problem: General Theory	212
7.4.1	Formulation of the abstract control problem	212
7.4.2	ARE subject to condition (7.4.15)	213
7.5	ARE Subject to a Singular Estimate for $e^{At}B$	214
7.5.1	Formulation of the results	214
7.5.2	Proof of Theorem 7.5.1	215
7.6	Back to Structural Acoustic Problems: Proofs of Theorems 7.3.1 and 7.3.2	222
7.7	Comments and Open Problems	222
	Bibliography	225
	Index	239
