

Contents

Preface	iii
Contributors	v
1 Permutation Groups and p -Groups Gregory Butler	1
2 Computing with Finite Simple Groups and Their Covering Groups Colin M. Campbell Edmund F. Robertson	17
3 The Bimonster, the Group Y_{555} , and the Projective Plane of Order 3 John H. Conway Simon P. Norton Leonard H. Soicher	27
4 Cohomology Rings of Infinitesimal Unipotent Subgroups of $SL_n(k)$ Ronni P. Crane	51
5 Codes and Existence Theorems Marshall Hall, Jr.	61
6 Computation of Cohomology Groups and Enumeration of Finite Perfect Groups Derek F. Holt	67
7 Mathematical Packages in Ada-like Languages Anthony Hughes	71

8	Algorithms for Sylow p -Subgroups and Solvable Groups William M. Kantor	77
9	Hopf Algebras via Symbolic Algebra Richard G. Larson	91
10	Advances in Computational Galois Theory John McKay	99
11	Computer Solution of Word Problems in Universal Algebra John Pedersen	103
12	Binary Cyclic Codes Vera Pless	129
13	Matrix Generators for the Held Group A. J. E. Ryba	135
14	Construction of Group Representations from Geometries Stephen D. Smith	143
15	Presentations for Some Groups Related to Co_1 Leonard H. Soicher	151
16	New Two-Element Generating Sets for M_{22} , M_{23} , M_{24} Anestis A. Tzoumpas	155
	Index	161
