

Preface	iii
Contributors	ix
PART I: BASIC RESULTS	
1. Second-Order Conditions That Are Necessary with Probability One <i>Jonathan E. Spingarn</i>	3
2. On the Convergence of Sequences of Closed Functions <i>Roger J. B. Wets</i>	17
3. Optimal Value Differential Stability Results for General Inequality Constrained Differentiable Mathematical Programs <i>Anthony V. Fiacco and William P. Hutzler</i>	29
4. The Generalized Gradient of the Perturbation Function in Mathematical Programming <i>Jacques Gauvin</i>	45
5. First Order Sensitivity of the Optimal Value Function in Mathematical Programming and Optimal Control <i>Helmut Maurer</i>	51
6. Regions of Stability for Arbitrarily Perturbed Convex Programs <i>Sanjo Zlobec, R. Gardner, and Adi Ben-Israel</i>	69
PART II: APPLICATIONS AND INTERFACES	
7. Parametric Analysis in Geometric Programming: An Incremental Approach <i>John J. Dinkel, Gary A. Kochenberger, and Danny S. Wong</i>	93
8. Preliminary Sensitivity Analysis of a Stream Pollution Abatement System <i>Anthony V. Fiacco and Abolfazl Ghaemi</i>	111
9. Problem Formulations and Numerical Analysis in Integer Programming and Combinatorial Optimization <i>Stephen C. Graves and Jeremy F. Shapiro</i>	131
10. Value Perturbation to Reduce Storage Requirements <i>Harvey J. Greenberg and Richard P. O'Neill</i>	149
11. Application of Continuation Methods in Stability and Optimization Problems of Engineering <i>Raman K. Mehra and Robert B. Washburn, Jr.</i>	169

12. Estimation of Hydrogeologic Parameters for Optimal Groundwater Basin Development <i>John W. Labadie and Duane R. Hampton</i>	205
