Preface xvii

Quadratic modules over polynomial rings
Hyman Bass

Introduction 1
1. Definitions, and background of the problem 2
2. Reduction by the Cancellation Theorem to low ranks 5
3. Quadratic spaces of low rank 7
4. Proof of the Cancellation Theorem 12
5. Proof of Karoubi's theorem 21
References 22

The action of the universal modular group on certain boundary points
Lipman Bers

Text 25
References 35

Differentially closed fields: a model-theoretic tour
Lenore Blum

Introduction 37
1. Background 38
2. Model completions 39
3. Main results 40
4. Some properties of differential closures and some immediate consequences 41
5. Notes 43
Appendix: Details of uniqueness proof filled in 55
References 60

On the hyperalgebra of a semisimple algebraic group
J. E. Humphreys

1. The hyperalgebra 203
2. The algebra $\mathbf{u}_r$ and its representations 204
3. Tensor products 208
4. Completely reducible G-modules 209
5. Mumford's conjecture 209
References 210

A notion of regularity for differential local algebras
Joseph Johnson

Introduction 211
1. Some preliminary facts about Kähler differentials 212
2. Regular differential algebras 216
3. A sufficient condition for regularity 219
4. Regular graded modules 221
5. The openness of the set of regular points 226
6. Regularity for Δ-fields 230
References 232

The Engel–Kolchin theorem revisited
Irving Kaplansky

1. Introduction 233
2. A second unification of Kolchin's theorem and Levitzki's theorem 233
3. Two more theorems 234
4. Lie and Jordan analogues 236
5. The infinite case 236
References 237

Prime differential ideals in differential rings
William F. Keigher

1. Special differential rings 239
2. The prime differential spectrum of a differential ring 245
References 249

Constrained cohomology
J. Kovacic

Introduction 251
Notation 252

1. Constrained cohomology groups 252
2. Galois cohomology 256
3. Change of group 256
4. $\mathscr{F}$-Cohomology 258
5. Change of field 259
6. The Hochschild–Serre sequence 262
References 266

The integrability condition of deformations of *CR* structures
Masatake Kuranishi

Introduction 267
1. The integrability condition of *CR* structures 268
2. The integrability condition of deformations 272
References 278

Noetherian rings with many derivations
Hideyuki Matsumura

Text 279
References 293

Hopf maps and quadratic forms over $\mathbb{Z}$
Takashi Ono

1. Hurwitz triple and the map f 296
2. The map f and the map h 297
3. The family $\mathscr{L}$ 298
4. Hopf fibration $S^{15} \to S^8$ over $\mathbb{Z}$ 302
References 304

Families of subgroup schemes of formal groups
Frans Oort

1. Strict families of finite subgroup schemes of formal groups 306
2. Liftability of abelian varieties 316
References 318

An effective lower bound on the "diophantine" approximation of algebraic functions by rational functions (II)
Charles F. Osgood

Text 321
References 326

On elementary, generalized elementary, and liouvillian extension fields
Maxwell Rosenlicht and Michael Singer

Text 329
References 342

Derivations and valuation rings
A. Seidenberg

Text 343
References 347

On theorems of Lie–Kolchin, Borel, and Lang
Robert Steinberg

Text 349
References 353

A differential-algebraic study of the intrusion of logarithms into asymptotic expansions
Walter Strodt

A. Introduction 355
B. Some basic notations, procedures, and lemmas for the adjunction rank-rise problem 357
C. Instability ladders for differential polynomials of Class (V, r) 361
D. Instability ladders for r-normal differential polynomials 363
E. Instability ladders for asymptotically nonsingular differential polynomials 366
F. Rank-rise results for the general first-order equation 367
G. Other rank-rise results 370
Appendix 371
References 374

A "theorem of Lie–Kolchin" for trees
J. Tits

Introduction 377
1. Trees 378
2. Various fixed-point properties 380
3. Solvable groups 381
4. Algebraic simple groups of relative rank ≥ 2 383
5. The rank 1 case 385
References 388

Regular elements in anisotropic tori
F. D. Veldkamp

	Introduction	389
1.		391
2.		392
3.	Classical groups	393
4.	Anisotropic tori in classical groups	395
5.	Results for the classical groups	396
6.	Type ${}^1A_l$	396
7.	Type ${}^1B_l$	399
8.	Type ${}^1C_l$	402
9.	Type ${}^1D_l$	403
10.	Type ${}^2A_l$	404
11.	Type ${}^2D_l$	405
12.	The Suzuki groups ${}^2C_2(q^2)$	405
13.	Groups of type ${}^3D_4$	406
14.	Conjugacy classes in the Weyl group of F_4	409
15.	Groups of type ${}^1F_4$	411
16.	The Ree groups ${}^2F_4$	413
17.	Groups of type ${}^1G_2$	415
18.	Groups of type ${}^2G_2$	417
19.	Endomorphisms σ with cyclic centralizer in W	418
20.	Groups of type ${}^1E_6$	420
21.	Groups of type ${}^2E_6$	421
22.	Groups of type ${}^1E_7$	422
23.	Groups of type ${}^1E_8$	423
	References	424
