

## Table of Contents

Editor's Preface	ix
Preface	xi
Introducing the Contributors	xiii
CHAPTER 1. <i>Trends in Multidimensional Systems Theory</i> by N. K. Bose	1
1.1 Introduction	1
1.2 Multidimensional Systems Stability	3
1.3 Multivariate Realization Theory	17
1.4 $n$ -D Problem of Moments and Its Applications in Multidimensional Systems Theory	26
1.5 Role of Irreducible Polynomials in Multidimensional Systems Theory	30
1.6 Hilbert Transform and Spectral Factorization	31
1.7 Conclusions	32
References	35
CHAPTER 2. <i>Multivariate Rational Approximants of the Padé-Type in Systems Theory</i> by N. K. Bose	41
2.1 Introduction and Motivation	41
2.2 Multivariate Padé-Type Approximants (Scalar Case)	42
2.3 Padé-Type Matrix Approximants	47
2.4 Conclusions	48
References	49
CHAPTER 3. <i>Causal and Weakly Causal 2-D Filters with Applications in Stabilization</i> by J. P. Guiver and N. K. Bose	52
3.1 Scalar 2-D Input/Output Systems	52
3.2 Stability	55
3.3 Structural Stability	60

3.4	Multi-Input/Multi-Output Systems	61
3.5	Stabilization of Scalar Feedback Systems	61
3.6	Characterization of Stabilizers for Scalar Systems	66
3.7	Stabilization of Strictly Causal Transfer Matrices	72
3.8	Characterization of Stabilizers for MIMO Systems	79
3.9	Stabilization of Weakly Causal Systems	84
3.10	Stabilization of MIMO Weakly Causal Systems	94
3.11	Conclusions	98
	References	99
CHAPTER 4. <i>Stabilization of Linear Spatially-Distributed</i> <i>Continuous-Time and Discrete-Time Systems</i> by E. W. Kamen		
		101
4.1	Introduction	101
4.2	The State Representation and Input/Output Description	107
4.3	Discretizations in Time	116
4.4	Representation in Terms of a Family of Finite- Dimensional Systems	120
4.5	Stability	122
4.6	Reachability and Stabilizability	127
4.7	The Riccati Equation and Stabilizability	132
4.8	Stabilization by Dynamic Output Feedback	136
4.9	Application to Tracking	140
	Acknowledgement	144
	References	144
CHAPTER 5. <i>Linear Shift-Variant Multidimensional Systems</i> by H. M. Valenzuela and N. K. Bose		
		147
5.1	Introduction	147
5.2	2-D Quarter Plane State-Space Model	150
5.3	$k$ -D State-Space Model	154
5.4	State-Space Model for the Inverse System	167
5.5	Examples of Applications	169
5.6	Conclusions	179
	References	182
CHAPTER 6. <i>Gröbner Bases: An Algorithmic Method in</i> <i>Polynomial Ideal Theory</i> by B. Buchberger		
		184
6.1	Introduction	184
6.2	Gröbner Bases	186

6.3	Algorithmic Construction of Gröbner Bases	191
6.4	An Improved Version of the Algorithm	194
6.5	Application: Canonical Simplification, Decision of Ideal Congruence and Membership, Computation in Residue Class Rings	200
6.6	Application: Solvability and Exact Solution of Systems of Algebraic Equations	207
6.7	Application: Solution of Linear Homogeneous Equations with Polynomial Coefficients	217
6.8	Gröbner Bases for Polynomial Ideals over the Integers	222
6.9	Other Applications	227
6.10	Specializations, Generalizations, Implementations, Complexity	227
	Acknowledgement	229
	References	229
CHAPTER 7. <i>The Equation <math>Ax = b</math> Over the Ring <math>C[z, w]</math></i> by J. P. Guiver		233
7.1	Introduction	233
7.2	Sufficient Condition for Solution	233
	Appendix A: Zero-Dimensional Polynomial Ideals	241
	References	244
CHAPTER 8. <i>Open Problems</i>		245
	Index	261
