

# CONTENTS

<u>Chapter No.</u>	<u>Page No.</u>
<b>1 VECTORS AND SCALARS</b>	<b>1</b>
Basic Definitions; Graphical and Component Representation of Vectors	2
Graphical Operations and Scalar Multiplication	10
Analytical Operations on Vectors	21
Applications in Geometry and Physics	26
<b>2 MAGNITUDE, LINEAR DEPENDENCE AND BASE VECTORS</b>	<b>34</b>
Magnitude of a Vector	36
Applications in Geometry and Physics	42
Linear Combination, Linear Dependence of Vectors	46
Representation of Vectors in Terms of Base Vectors	55
<b>③ THE SCALAR PRODUCT AND THE VECTOR PRODUCT</b>	<b>64</b>
Definitions and Properties of the Scalar Product	66
Applications in Geometry and Physics	71

Geometrical Definition of Vector Product	81
Component Definition of Vector Product	85
Scalar Triple Product and Vector Triple Product	92
Identities and Reciprocal Vectors	97
Vectors Equations of Lines, Planes, Spheres and the Moment of a Vector	102

#### **4 ORDINARY DERIVATIVES OF VECTORS 112**

Vector Functions and Parametric Equations of a Curve	113
Limits, Continuity and the Derivative of a Vector Function	121
Graphical Representation of the Derivative, Tangent Vector and Basic Properties	132
Vector Solutions to Differential Equations	141

#### **5 APPLICATIONS OF ORDINARY DERIVATIVES OF VECTORS IN DIFFERENTIAL GEOMETRY AND MECHANICS 146**

Space Curves, Frenet Formulas, Characteristic Vectors and Plane Curves	147
Identities Involving Characteristic Vectors	171
Position Vector, Velocity, Angular Velocity and Acceleration	177
Tangential and Normal Components of Acceleration	188
Newton's Laws, Moment Vector, Angular Momentum and Center of Mass	195
Trajectories and Collisions of Particles	205
Rigid Body Mechanics, Coordinate Systems and Inertial Systems	210

#### **6 DIFFERENTIAL CALCULUS OF FUNCTIONS OF SEVERAL VARIABLES 220**

Continuous Functions, Partial Derivatives and Total Differential	222
Derivatives and Differentials of Composite Functions, Scalar Fields and Vector Fields	233

Gradient of a Scalar Field	244
Properties of the Gradient Operator	247
Tangent Plane, Directional Derivative and Laplacian Operator	252

## **7 PARTIAL DIFFERENTIATION OF VECTORS, GRADIENT AND DIVERGENCE** 268

Partial Differentiation of Vectors	269
Gradient of a Scalar Field and Functionally Related Functions	282
The Divergence and Laplacian Operators	290
Identities Involving Gradient and Divergence, Solenoidal Vectors	297

## **8 CURL OF A VECTOR FIELD** 308

Definition, Properties and Identities of the Curl Operator	309
Irrotational (Conservative) Vector Fields, Solenoidal Vector Fields	319
Laplacian Operator and Combined Operations	326
Complex Identities Involving Curl, Divergence, and Gradient Operators	332
Scalar Potential, Other Differential Operators and Dyadics	341

## **9 ELEMENTS OF LINEAR ALGEBRA** 356

Mappings, Binary Operations, Groves, Rings and Fields	358
Vector Spaces and Span Sets	364
Position Vectors, Transformations, Invariants, Linear Combinations and Rotation	373
Linear Transformations	385
Linearly Independent Vectors and The Fundamental Theorem of Linear Algebra	401
Transformation of Cartesian Coordinate Systems, Determinants and Inverse Transformations	405

## **10 TENSOR NOTATION** 413

- Systems of Order Zero, One, Two . . . . ., Kronecker Delta and Summation Convention 415
- Basic Operations and Contraction of Systems, Symmetric and Sken-Symmetric Systems, e-System 420
- Determinants, Cofactors, Systems of Linear Equations and Quadratic Forms 428
- Scalar and Vector Product, Differentiation, Gradient, Divergence, Rotation and The Laplacian in Tensor Notation 435

## **11 APPLICATIONS OF GRADIENT, DIVERGENCE AND CURL IN PHYSICS** 445

- Graphical Representation of Vector Fields 445
- Gravitation, Harmonic Functions, Reflection of Light, Ridgid Body Rotation, Surface Tension and Elasticity 450
- Concepts in Fluid Dynamics 461
- Concepts in Heat Flow 481
- Concepts in Electromagnetics, Maxwell's Equations 485

## **12 ORDINARY INTEGRALS OF VECTORS AND LINE INTEGRALS** 504

- Ordinary Vector Integration, Integral of Scalar and Vector Product of Vectors 506
- Kinematics, Central Force, Angular Momentum, Aerial Velocity and Kepler's Laws 512
- Parametric Representation, Orientation and Length of Curves 520
- Line Integrals, Work Done in a Force Field 527
- Integration of Tangential and Normal Components of a Vector, Kinetic and Potential Energy, Regions and Domains 546
- Conservative Vector Fields, Scalar Potential 554
- Curl of a Conservative Field 562
- Exact Differentials, Particle in the Conservative Field and Vector Potential 572

### **13 DOUBLE INTEGRALS 582**

Smooth Surfaces, Orientation and Vectors Normal to a Surface	583
Definition of Double Integral, Iterated Integrals	593
Double Integrals Representing Area	606
Double Integrals Representing Volume	612
Center of Mass and Moments of Inertia	616
Transformation of Coordinates	628

### **14 SURFACE INTEGRALS OF VECTORS, FLUX 635**

Surfaces, Unit Normal Vector, and Parametric Representation of a Surface	636
Surfaces Given by $Z=f(x,y)$	645
Flux of a Vector Field	657
Special Cases of Vector Integration, Cartesian Form of Surface Integrals	675

### **15 SURFACE INTEGRALS AND FLUX IN PHYSICAL APPLICATIONS 683**

Flux of a Fluid Flow	683
Heat Flow	687
Electric Field, Gauss' Law and Electrostatic Potential	694

### **16 VOLUME INTEGRALS 704**

Definition of Triple Integral, Riemann Sums, Iterated Integrals	705
Volume of a Region	716
Triple Integration in Cylindrical and Spherical Coordinates	723
Multiple Integrals, Mass and Density, Center of Gravity	732
Moment of Inertia	737
Volume Integrals of Vectors, Surface and Volume Integral Relationship, Gauss' Law and Electrostatic Potential	746

## 17 GREEN'S THEOREM IN THE PLANE 758

Green's Theorem, Applications and Verification of Green's Theorem	759
Area Bounded by a Closed Curve, Polar Coordinates	777
Green's Theorem (Extended Version)	786
Green's Theorem for Multiply-Connected Regions and its Applications	790
Green's Theorem in Vector Notation	802
Applications in Physics-Force Field, Flow, Circulation and Gauss' Theorem	806
Cauchy-Riemann Equations, Line Integrals Independent of Path	815
Transformation of Coordinates	825

## 18 CONSERVATIVE VECTOR FIELDS 828

## 19 DIVERGENCE THEOREM 854

Divergence Theorem, Basic Applications	855
Verification of the Divergence Theorem	869
Basic Applications of the Divergence Theorem	876
Basic Identities, Green's First and Second Identities	883
Applications of Green's Identities, Harmonic Functions	888
Further Applications of the Divergence Theorem	895
Definition of Divergence, Gradient and Rotation	899
Gauss' Theorem, Solid Angle, Divergence of n-dimensional Space	904

## 20 STOKES' THEOREM 945

Del Operator, Rotation of a Vector Function	946
Stokes' Theorem, Proof of Stokes' Theorem	949
Applications of Stokes' Theorem	965
Basic Identities Involving Stokes' Theorem, Further Applications	979
Stokes' Theorem for Surfaces Given in Parametric Form	992
Another Definition of Rotation, Further	

Applications	996
Applications in Electromagnetics	1003
Irrotational Fields	1006
Solenoidal Fields	1011

## **21 CYLINDRICAL AND SPHERICAL COORDINATES** 1015

Polar Coordinates	1016
Coordinate Surfaces and Curves, Orthogonal Systems	1020
The Unit Tangent Vectors of the Cylindrical Coordinate System	1026
Element of Arc Length, Volume Element and Scale Factors of the Cylindrical and Spherical Coordinate Systems	1031
The Unit Tangent Vectors of the Spherical Coordinate System	1040
Volume Element in Spherical, Cylindrical and Curvilinear Coordinates	1048
The Gradient, Divergence, Curl, Laplacian and Jacobian in Cylindrical and Spherical Coordinates	1057

## **22 CURVILINEAR COORDINATES** 1088

Coordinate Surfaces, Coordinate Curves, Orthogonal Coordinate Systems	1089
Unit Tangent Vectors and Scale Factors	1093
Element of Arc Length, Volume Element	1099
The Gradient Divergence, Curl and Laplacian in Orthogonal Coordinates	1102
Some Types of Orthogonal Coordinate Systems	1110
Transformation of Coordinates-Orthogonal Coordinate Systems	1116
Contravariant and Covariant Components of a Vector, Metric Coefficients and the Jacobian of a Transformation	1127

## **23 ADVANCED TOPICS** 1142

<b>MATRIX METHODS IN VECTOR ANALYSIS</b>	<b>1142</b>
--	-------------

**LINEAR ORTHOGONAL TRANSFORMATIONS** 1179

Transformation Matrix, Rotation, Orthogonal Transformation 1179  
Transformation of Scalar and Vector Fields, Transformation of  $\text{grad } f$ ,  $\text{div } \vec{F}$  and Properties of  $\text{curl } \vec{F}$  1184

**TRANSPORT THEOREM** 1191

Flux Through a Moving Surface 1191  
Flux Transport Theorem 1193  
Reynold's Transport Theorem, Euler's Expansion Formula 1203

**DIFFERENTIAL FORMS** 1207

Differential One-form, Exterior Product 1207  
Differential Two-form, Differential  $p$ -forms, Addition and Multiplication of Forms 1211  
Properties of  $p$ -forms, Integrals of One-forms and  $p$ -forms 1219

**EXTERIOR DERIVATIVE** 1228

Exterior Differentiation, Basic Identities, Conservative and Solenoidal Fields 1228  
Green's Theorem, Stokes' Theorem, Divergence Theorem, Exact Differential Forms 1236

**APPENDIX** 1242

**INDEX** 1252
