

Preface		v
Guide		ix
1 Algebra		
1.1 Group Theory		
1.1.1 Axioms		1
1.1.2 Subgroups		2
1.1.3 Exact versus splitting sequences		4
1.1.4 The functional equation: $f(x + y) = f(x) + f(y)$		5
1.1.5 Free groups; free topological groups		9
1.1.6 Finite simple groups		18
1.2 Algebras		
1.2.1 Division algebras (“noncommutative fields”)		19
1.2.2 General algebras		20
1.2.3 Miscellany		22
1.3 Linear Algebra		
1.3.1 Finite-dimensional vector spaces		25
1.3.2 General vector spaces		31
1.3.3 Linear programming		37
2 Analysis		
2.1 Classical Real Analysis		
2.1.1 \mathbb{R}^X		42
2.1.2 Derivatives and extrema		53
2.1.3 Convergence of sequences and series		66
2.1.4 $\mathbb{R}^{X \times Y}$		95
2.2 Measure Theory		
2.2.1 Measurable and nonmeasurable sets		103
2.2.2 Measurable and nonmeasurable functions		132
2.2.3 Group-invariant measures		143
2.3 Topological Vector Spaces		
2.3.1 Bases		156
2.3.2 Dual spaces and reflexivity		162
2.3.3 Special subsets of Banach spaces		165
2.3.4 Function spaces		168
2.4 Topological Algebras		
2.4.1 Derivations		172
2.4.2 Semisimplicity		174
2.5 Differential Equations		
2.5.1 Wronskians		177
2.5.2 Existence/uniqueness theorems		177

2.6	Complex Variable Theory	
2.6.1	Morera's theorem	180
2.6.2	Natural boundaries	180
2.6.3	Square roots	183
2.6.4	Uniform approximation	183
2.6.5	Rouché's theorem	184
2.6.6	Bieberbach's conjecture	184
3	Geometry/Topology	
3.1	Euclidean Geometry	
3.1.1	Axioms of Euclidean geometry	186
3.1.2	Topology of the Euclidean plane	190
3.2	Topological Spaces	
3.2.1	Metric spaces	198
3.2.2	General topological spaces	200
3.3	Exotica in Differential Topology	208
4	Probability Theory	
4.1	Independence	210
4.2	Stochastic Processes	216
4.3	Transition Matrices	221
5	Foundations	
5.1	Logic	223
5.2	Set Theory	229
	Bibliography	233
	Supplemental Bibliography	243
	Symbol List	249
	Glossary/Index	257
