Preface	ix
I PROBLEMS	1
1 Representations of Boolean Functions	3
1.1 Tabular Representations	3
1.2 Formulas	8
1.3 Disjunctive and Conjunctive Normal Forms	20
1.4 Polynomials	25
1.5 Essential and Unessential Variables	30
2 Closed Classes and Completeness in Boolean Algebra	38
2.1 Closure Operation	38
2.2 Self-Dual Functions	43
2.3 Linear Functions	47
2.4 Functions Preserving the Constants	52
2.5 Monotone Functions	55
2.6 Completeness and Closed Classes	60
3 Many-Valued Logics	66
3.1 Formulas of k -Valued Logics	66
3.2 Closed Classes and Completeness in k -valued logic	71
4 Graphs and Networks	81
4.1 Basic Concepts of Graph Theory	81
4.2 Planarity, Connectivity, and Numerical Characteristics of Graphs . .	88
4.3 Directed Graphs	93
4.4 Trees and Bipolar Networks	98
5 Elements of Coding Theory	110
5.1 Hamming's Distance	110
5.2 Hamming's Codes	113
5.3 Linear Codes	118
5.4 Alphabetic Code Divisibility	122
5.5 Optimal Codes	127
6 Finite Automata	134
6.1 Determined and Boundedly Determined Functions	134
6.2 Diagrams, Equations, and Circuits	148

6.3	Closed Classes and Completeness in Automata	182
7	Elements of Algorithm Theory	188
7.1	Turing Machines	188
7.2	Recursive Functions	202
7.3	Computability	209
8	Combinatorics	214
8.1	Permutations and Combinations	214
8.2	Inclusion and Exclusion Formula	224
8.3	Recurrences and Generating Functions	228
8.4	Polya's Theory	236
8.5	Asymptotics and Inequalities	240
8.6	Estimates in Graph Theory	248
9	Boolean Minimization	254
9.1	Faces of the n -cube. Covers and tests for tables	254
9.2	Constructing of the Reduced Disjunctive Normal Form Methods	260
9.3	Irredundant, Minimal, and Shortest DNFs	266
10	Logical Design	273
10.1	Circuits of Logical Elements	273
10.2	Contact Circuits	280
II	ANSWERS, HINTS, SOLUTIONS	295
1	Representations of Boolean Functions	297
1.1	Tabular Representations	297
1.2	Formulas	297
1.3	Disjunctive and Conjunctive Normal Forms	299
1.4	Polynomials	299
1.5	Essential and Unessential Variables	300
2	Closed Classes and Completeness in Boolean Algebra	303
2.1	Closure Operation	303
2.2	Self-Dual Functions	305
2.3	Linear Functions	306
2.4	Functions Preserving the Constants	307
2.5	Monotone Functions	309
2.6	Completeness and Closed Classes	311
3	Many-Valued Logics	313
3.1	Formulas of k -Valued Logics	313
3.2	Closed Classes and Completeness in k-Valued logic	315

4 Graphs and Networks	325
4.1 Basic Concepts of Graph Theory	325
4.2 Planarity, Connectivity, and Numerical Characteristics of Graphs	326
4.3 Directed Graphs	327
4.4 Trees and Bipolar Networks	328
5 Elements of Coding Theory	329
5.1 Hamming's Distance	329
5.2 Hamming's Codes	331
5.3 Linear Codes	333
5.4 Alphabetic Code Divisibility	335
5.5 Optimal Codes	337
6 Finite Automata	339
6.1 Determined and Boundedly Determined Functions	339
6.2 Diagrams, Equations, and Circuits	341
6.3 Closed Classes and Completeness in Automata	345
7 Elements of Algorithm Theory	348
7.1 Turing Machines	348
7.2 Recursive Functions	349
7.3 Computability	351
8 Combinatorics	353
8.1 Permutations and Combinations	353
8.2 Inclusion and Exclusion Formula	363
8.3 Recurrences and Generating Functions	368
8.4 Polya's Theory	379
8.5 Asymptotics and Inequalities	383
8.6 Estimates in Graph Theory	401
9 Boolean Minimization	403
9.1 Faces of the n -cube. Covers and tests for tables	403
9.2 Constructing of the Reduced DNF Methods	406
9.3 Irredundant, Minimal, and Shortest DNFs	408
10 Logical Design	409
10.1 Circuits of Logical Elements	409
10.2 Contact Circuits	410
Bibliography	415
Index	419
