Preface	vii
Acknowledgments	ix
I Problems	1
1 Elementary Number Theory	2
1.1 Integers	2
1.2 Applications of Unique Factorization	6
1.3 The <i>ABC</i> Conjecture	7
1.4 Supplementary Problems	9
2 Euclidean Rings	11
2.1 Preliminaries	11
2.2 Gaussian Integers	15
2.3 Eisenstein Integers	16
2.4 Some Further Examples	19
2.5 Supplementary Problems	23
3 Algebraic Numbers and Integers	25
3.1 Basic Concepts	25
3.2 Liouville's Theorem and Generalizations	27
3.3 Algebraic Number Fields	30
3.4 Supplementary Problems	36

4	Integral Bases	39
4.1	The Norm and the Trace	39
4.2	Existence of an Integral Basis	41
4.3	Examples	44
4.4	Ideals in \mathcal{O}_K	47
4.5	Supplementary Problems	48
5	Dedekind Domains	53
5.1	Integral Closure	53
5.2	Characterizing Dedekind Domains	55
5.3	Fractional Ideals and Unique Factorization	57
5.4	Dedekind's Theorem	62
5.5	Factorization in \mathcal{O}_K	64
5.6	Supplementary Problems	66
6	The Ideal Class Group	69
6.1	Elementary Results	69
6.2	Finiteness of the Ideal Class Group	71
6.3	Diophantine Equations	74
6.4	Exponents of Ideal Class Groups	75
6.5	Supplementary Problems	76
7	Quadratic Reciprocity	81
7.1	Preliminaries	81
7.2	Gauss Sums	85
7.3	The Law of Quadratic Reciprocity	86
7.4	Quadratic Fields	88
7.5	Primes in Special Progressions	91
7.6	Supplementary Problems	94
8	The Structure of Units	97
8.1	Dirichlet's Unit Theorem	97
8.2	Units in Real Quadratic Fields	106
8.3	Supplementary Problems	112
9	Higher Reciprocity Laws	115
9.1	Cubic Reciprocity	115
9.2	Eisenstein Reciprocity	120
9.3	Supplementary Problems	123
10	Analytic Methods	125
10.1	The Riemann and Dedekind Zeta Functions	125
10.2	Zeta Functions of Quadratic Fields	128
10.3	Dirichlet's L -Functions	131
10.4	Primes in Arithmetic Progressions	132
10.5	Supplementary Problems	134

II	Solutions	137
1	Elementary Number Theory	139
1.1	Integers	139
1.2	Applications of Unique Factorization	146
1.3	The <i>ABC</i> Conjecture	150
1.4	Supplementary Problems	153
2	Euclidean Rings	159
2.1	Preliminaries	159
2.2	Gaussian Integers	161
2.3	Eisenstein Integers	165
2.4	Some Further Examples	167
2.5	Supplementary Problems	169
3	Algebraic Numbers and Integers	175
3.1	Basic Concepts	175
3.2	Liouville's Theorem and Generalizations	176
3.3	Algebraic Number Fields	177
3.4	Supplementary Problems	180
4	Integral Bases	185
4.1	The Norm and the Trace	185
4.2	Existence of an Integral Basis	186
4.3	Examples	189
4.4	Ideals in \mathcal{O}_K	191
4.5	Supplementary Problems	192
5	Dedekind Domains	205
5.1	Integral Closure	205
5.2	Characterizing Dedekind Domains	206
5.3	Fractional Ideals and Unique Factorization	207
5.4	Dedekind's Theorem	211
5.5	Factorization in \mathcal{O}_K	212
5.6	Supplementary Problems	213
6	The Ideal Class Group	221
6.1	Elementary Results	221
6.2	Finiteness of the Ideal Class Group	221
6.3	Diophantine Equations	223
6.4	Exponents of Ideal Class Groups	224
6.5	Supplementary Problems	226
7	Quadratic Reciprocity	239
7.1	Preliminaries	239
7.2	Gauss Sums	242

7.3	The Law of Quadratic Reciprocity	243
7.4	Quadratic Fields	245
7.5	Primes in Special Progressions	246
7.6	Supplementary Problems	247
8	The Structure of Units	255
8.1	Dirichlet's Unit Theorem	255
8.2	Units in Real Quadratic Fields	260
8.3	Supplementary Problems	267
9	Higher Reciprocity Laws	275
9.1	Cubic Reciprocity	275
9.2	Eisenstein Reciprocity	279
9.3	Supplementary Problems	284
10	Analytic Methods	289
10.1	The Riemann and Dedekind Zeta Functions	289
10.2	Zeta Functions of Quadratic Fields	292
10.3	Dirichlet's L -Functions	295
10.4	Primes in Arithmetic Progressions	298
10.5	Supplementary Problems	300
	Bibliography	309
	Index	311
