Editorial Note	xi
Preface and Acknowledgements	xiii
1 Introduction	1
1.1 Objectives	1
1.2 Modelling	2
1.3 Analytical resources	4
2 Engineering Fluid Mechanics	7
2.1 The Navier–Stokes equations.	7
2.2 Incompressible flow	8
2.3 Solutions of the complete Navier–Stokes equations	10
2.4 Potential flow methods	11
2.5 Unsteady incompressible irrotational flow	15
2.6 Rotational flows	16
2.7 Wakes.	17
2.8 Turbulence	19
2.9 Compressible flows	20
2.10 Three-dimensional subsonic flows	26
3 Boundary Layers	29
3.1 Introduction	29
3.2 Two-dimensional boundary layers	30
3.3 Unsteady boundary layers	39
3.4 Three-dimensional boundary layers	42
3.5 Flow in pipes	47
4 Compressible Flow.	53
4.1 Compressibility, speed of sound and Mach number	53
4.2 Equation of state for a perfect gas	55
4.3 The first law of thermodynamics, irreversibility, entropy and the second law of thermodynamics.	55

4.4	The equations of motion	57
4.5	Shock waves	63
4.6	The method of characteristics	68
4.7	Conical and pseudo-steady similarity	79
4.8	Small perturbation solutions, higher approximations and iterative solutions	82
5	Free Surfaces and Waves	91
5.1	Hydrostatics	91
5.2	Open channel flow	93
5.3	Surface water waves	98
5.4	Reflection, refraction and diffraction	105
6	Hydrology.	111
6.1	Introduction	111
6.2	Surface run-off and stream flow	111
6.3	Simplified dynamic model	119
6.4	Simplified theory: the kinematic wave.	123
6.5	Atmospheric circulation	125
7	Flow and Deformation in Soils	131
7.1	Introduction and basic concepts.	131
7.2	Steady groundwater flow	134
7.3	Non-steady groundwater flow	142
7.4	Mathematical solutions to the Terzaghi consolidation equation	148
7.5	Secondary consolidation	153
7.6	Biot's theory of three-dimensional consolidation	157
7.7	Behaviour of partially saturated soils and swelling soils	160
7.8	Failure of soils	162
7.9	Plasticity analysis in soil mechanics	163
7.10	Further topics on soil mechanics	170
	Appendix A	170
	Appendix B	172
8	Heat Transfer	177
8.1	Conduction	177
8.2	One-dimensional steady-state heat conduction.	179
8.3	Extended surfaces.	181
8.4	Steady-state heat conduction in two dimensions	186
8.5	Transient conduction in one spatial dimension	188
8.6	Convection	193

8.7	Laminar flow systems	194
8.8	Turbulent flow systems	200
9	Chemical Engineering	205
9.1	Introduction	205
9.2	Reactors	207
9.3	Vapour liquid equilibria	217
9.4	Distillation	221
9.5	Gas absorption	231
10	Structural Mechanics	237
10.1	Introduction	237
10.2	Analytical linear problems with no gross deformations	242
10.3	Approximate methods	259
10.4	Dynamics	268
10.5	Optimum design	273
11	Polymer Engineering	275
11.1	Introduction	275
11.2	Time-dependent behaviour	276
11.3	Linear viscoelastic stress-strain constitutive relationships	279
11.4	Stress analysis	288
11.5	The solution of practical problems—approximate and numerical methods	293
11.6	Non-linear viscoelasticity	295
11.7	Finite elastic deformation	296
11.8	Polymer processing—aspects of extrusion	299
12	Nuclear Power	309
12.1	Introduction	309
12.2	Radioactive decay and isotopic transformations	310
12.3	Particle transport theory	318
12.4	The diffusion and other approximations	330
12.5	Reactor kinetics and control	339
12.6	Nuclear fuel cycles	346
13	Systems Engineering	
13.1	What is systems engineering?	361
13.2	Mathematical models	362
13.3	Optimization	363
13.4	Randomness	369
13.5	Imprecision	376
13.6	Closure	381

14 Control Engineering	383
14.1 Introduction	383
14.2 Mathematical models of systems	384
14.3 Estimating the dynamics of systems	390
14.4 Steady-state accuracy in linear feedback control systems	394
14.5 Stability of control systems	395
14.6 Frequency domain design of linear feedback control systems	400
14.7 Root locus and root contour methods	401
14.8 Static optimization	402
14.9 Adaptive control systems	404
14.10 State-space methods	405
14.11 Dynamic optimization	408
14.12 Multivariable control systems	410
14.13 Non-linear control systems	415
15 The Finite Element Method.	421
15.1 Introduction	421
15.2 Second-order elliptic boundary-value problems	422
15.3 Approximation schemes	426
15.4 A two-dimensional elliptic boundary-value problem	430
15.5 A finite element approximation scheme	432
15.6 Computation of the finite element approximation	436
15.7 Error analysis	438
15.8 Parametrically defined elements and functions.	440
15.9 A finite element scheme for an elliptic boundary-value problem, using parametrically defined finite element functions	444
15.10 The finite element scheme	447
15.11 Extensions and generalizations	448
Index	453
