CONTENTS OF THE ELEMENTS OF MATHEMATICS SERIES	ix
CHAPTER I. LIE ALGEBRAS	1
§ 1. Definition of Lie algebras	1
1. Algebras	1
2. Lie algebras	3
3. Commutative Lie algebras	5
4. Ideals	5
5. Derived series, lower central series	6
6. Upper central series	6
7. Extensions	7
8. Semi-direct products	8
9. Change of base ring	11
§ 2. Enveloping algebra of a Lie algebra	12
1. Definition of the enveloping algebra	12
2. Enveloping algebra of a product	13
3. Enveloping algebra of a subalgebra	14
4. Enveloping algebra of the opposite algebra	15
5. Symmetric algebra of a module	16
6. Filtration of the enveloping algebra	17
7. The Poincaré-Birkhoff-Witt Theorem	18
8. Extension of derivations	23
9. Extension of the base ring	25
§ 3. Representations	25
1. Representations	25

CONTENTS

2. Tensor product of representations	28
3. Representations on homomorphism modules	29
4. Examples	31
5. Invariant elements	32
6. Invariant bilinear forms	33
7. Casimir element	35
8. Extension of the base ring	36
§ 4. Nilpotent Lie algebras	38
1. Definition of nilpotent Lie algebras	38
2. Engel's Theorem	39
3. The largest nilpotency ideal of a representation	40
4. The largest nilpotent ideal in a Lie algebra	42
5. Extension of the base field	42
§ 5. Solvable Lie algebras	43
1. Definition of solvable Lie algebras	43
2. Radical of a Lie algebra	44
3. Nilpotent radical of a Lie algebra	44
4. A criterion for solvability	47
5. Further properties of the radical	48
6. Extension of the base field	49
§ 6. Semi-simple Lie algebras	50
1. Definition of semi-simple Lie algebras	50
2. Semi-simplicity of representations	51
3. Semi-simple elements and nilpotent elements in semi-simple Lie algebras	54
4. Reductive Lie algebras	56
5. Application: a criterion for semi-simplicity of representations	58
6. Subalgebras reductive in a Lie algebra	59
7. Examples of semi-simple Lie algebras	60
8. The Levi-Malcev Theorem	62
9. The invariants theorem	66
10. Change of base field	68
§ 7. Ado's Theorem	68
1. Coefficients of a representation	69
2. The extension theorem	69
3. Ado's Theorem	71
Exercises for § 1	73
Exercises for § 2	83
Exercises for § 3	85

CONTENTS

Exercises for § 4	91
Exercises for § 5	99
Exercises for § 6	102
Exercises for § 7	109
CHAPTER II. FREE LIE ALGEBRAS	111
§ 1. Enveloping bigebra of a Lie algebra	111
1. Primitive elements of a cogebra	111
2. Primitive elements of a bigebra	113
3. Filtered bigebras	114
4. Enveloping bigebra of a Lie algebra	115
5. Structure of the cogebra $U(\mathfrak{g})$ in characteristic 0	116
6. Structure of filtered bigebras in characteristic 0	119
§ 2. Free Lie algebras	122
1. Revision of free algebras	122
2. Construction of the free Lie algebra	122
3. Presentation of a Lie algebra	124
4. Lie polynomials and substitutions	124
5. Functorial properties	125
6. Graduations	126
7. Lower central series	128
8. Derivations of free Lie algebras	129
9. Elimination theorem	130
10. Hall sets in a free magma	132
11. Hall bases of a free Lie algebra	134
§ 3. Enveloping algebra of the free Lie algebra	136
1. Enveloping algebra of $L(\mathbf{X})$	136
2. Projector of $A^+(\mathbf{X})$ onto $L(\mathbf{X})$	138
3. Dimension of the homogeneous components of $L(\mathbf{X})$	140
§ 4. Central filtrations	142
1. Real filtrations	142
2. Order function	143
3. Graded algebra associated with a filtered algebra	144
4. Central filtrations on a group	145
5. An example of a central filtration	147
6. Integral central filtrations	148
§ 5. Magnus algebras	149
1. Magnus algebras	149
2. Magnus group	150

CONTENTS

3. Magnus group and free group.....	151
4. Lower central series of a free group	152
5. p -filtration of free groups	154
§ 6. The Hausdorff series	155
1. Exponential and logarithm in filtered algebras.....	155
2. Hausdorff group	157
3. Lie formal power series	158
4. The Hausdorff series	160
5. Substitutions in the Hausdorff series	171
§ 7. Convergence of the Hausdorff series (real or complex case) ..	164
1. Continuous-polynomials with values in \mathfrak{g}	164
2. Group germ defined by a complete normed Lie algebra .	165
3. Exponential in complete normed associative algebras	169
§ 8. Convergence of the Hausdorff series (ultrametric case)	170
1. p -adic upper bounds of the series \exp , \log and H	171
2. Normed Lie algebras	172
3. Group defined by a complete normed Lie algebra.....	172
4. Exponential in complete normed associative algebras	174
Appendix. Möbius function.....	176
Exercises for § 1	178
Exercises for § 2	181
Exercises for § 3	186
Exercises for § 4	187
Exercises for § 5	193
Exercises for § 6	201
Exercises for § 7	204
Exercises for § 8	205
Exercises for the Appendix	207
CHAPTER III. LIE GROUPS	209
§ 1. Lie groups	209
1. Definition of a Lie group	209
2. Morphisms of Lie groups.....	213
3. Lie subgroups	214
4. Semi-direct products of Lie groups	215

CONTENTS

5. Quotient of a manifold by a Lie group	217
6. Homogeneous spaces and quotient groups	219
7. Orbits	222
8. Vector bundles with operators	223
9. Local definition of a Lie group	226
10. Group germs	228
11. Law chunks of operation	231
§ 2. Group of tangent vectors to a Lie group	233
1. Tangent laws of composition	233
2. Group of tangent vectors to a Lie group	235
3. Case of group germs	237
§ 3. Passage from a Lie group to its Lie algebra	238
1. Convolution of point distributions on a Lie group	238
2. Functorial properties	241
3. Case of a group operating on a manifold	244
4. Convolution of point distributions and functions	245
5. Fields of point distributions defined by the action of a group on a manifold	248
6. Invariant fields of point distributions on a Lie group	249
7. Lie algebra of a Lie group	251
8. Functorial properties of the Lie algebra	254
9. Lie algebra of the group of invertible elements of an algebra	257
10. Lie algebras of certain linear groups	258
11. Linear representations	259
12. Adjoint representation	264
13. Tensors and invariant forms	268
14. Maurer–Cartan formulae	269
15. Construction of invariant differential forms	271
16. Haar measure on a Lie group	271
17. Left differential	274
18. Lie algebra of a Lie group germ	276
§ 4. Passage from Lie algebras to Lie groups	279
1. Passage from Lie algebra morphisms to Lie group morphisms	279
2. Passage from Lie algebras to Lie groups	281
3. Exponential mappings	284
4. Functoriality of exponential mappings	288
5. Structure induced on a sub-group	289
6. Primitives of differential forms with values in a Lie algebra	291
7. Passage from laws of infinitesimal operation to laws of operation	294

CONTENTS

§ 5.	Formal calculations in Lie groups	297
	1. The coefficients $c_{\alpha\beta\gamma}$	297
	2. Bracket in the Lie algebra	298
	3. Powers	300
	4. Exponential	303
§ 6.	Real and complex Lie groups	304
	1. Passage from Lie algebra morphisms to Lie group morphisms	304
	2. Integral subgroups	306
	3. Passage from Lie algebras to Lie groups	310
	4. Exponential mapping	311
	5. Application to linear representations	215
	6. Normal integral subgroups	316
	7. Primitives of differential forms with values in a Lie algebra	318
	8. Passage from laws of infinitesimal operation to laws of operation	318
	9. Exponential mapping in the linear group	320
	10. Complexification of a finite-dimensional real Lie group ..	322
§ 7.	Lie groups over an ultrametric field	326
	1. Passage from Lie algebras to Lie groups	327
	2. Exponential mappings	328
	3. Standard groups	328
	4. Filtration of standard groups	330
	5. Powers in standard groups	331
	6. Logarithmic mapping	333
§ 8.	Lie groups over \mathbf{R} or \mathbf{Q}_p	337
	1. Continuous morphisms	337
	2. Closed subgroups	340
§ 9.	Commutators, centralizers and normalizers in a Lie group ...	342
	1. Commutators in a topological group	342
	2. Commutators in a Lie group	343
	3. Centralizers	346
	4. Normalizers	347
	5. Nilpotent Lie groups	347
	6. Solvable Lie groups	352
	7. Radical of a Lie group	354
	8. Semi-simple Lie groups	355
§ 10.	The automorphism group of a Lie group	359
	1. Infinitesimal automorphisms	359

CONTENTS

2. The automorphism group of a Lie group (real or complex case)	362
3. The automorphism group of a Lie group (ultrametric case)	367
Appendix. Operations on linear representations	368
Exercises for § 1	370
Exercises for § 3	372
Exercises for § 4	376
Exercises for § 5	382
Exercises for § 6	383
Exercises for § 7	391
Exercises for § 8	395
Exercises for § 9	397
Exercises for § 10	409
HISTORICAL NOTE (CHAPTERS I TO III)	410
BIBLIOGRAPHY	431
INDEX OF NOTATION	435
INDEX OF TERMINOLOGY	439
Summary of certain properties of finite-dimensional Lie algebras over a field of characteristic 0	449
