

CONTENTS

List of Participants.....	xi
List of Technical Lectures.....	xiii
List of Survey Lectures.....	xv
Preface.....	xvii
Some remarks on the historical development of the algebraic theory of quadratic forms	
A. PFISTER.....	1
The graded Witt ring and galois cohomology, I	
J.K. ARASON, R. ELMAN and B. JACOB.....	17
An invitation to real spectra	
M. KNEBUSCH.....	51
Hermitian spaces over polynomial rings	
M. OJANGUREN.....	107
A proof of Merkurjev's theorem	
J.K. ARASON.....	121
Classical groups over rings	
L.N. VASERSTEIN.....	131
Involutions on simple algebras and orders	
W. SCHARLAU.....	141
Representations of integral quadratic forms	
M. KNESER.....	159
Topological methods for studying the composition of quadratic forms	
K.Y. LAM.....	173
Composition of quadratic forms in geometry and analysis: some recent applications	
A. KAPLAN.....	193
Representation of positive definite quadratic forms	
Y. KITAOKA.....	203
Uniform distribution in linear algebraic groups and related diophantine problems	
H-J. BARTELS.....	209

Spaces of orderings and semialgebraic sets	
L. BRÖCKER.....	231
Homomorphisms of algebraic and classical groups: a survey	
A.J. HAHN, D.G. JAMES, and B. WEISFEILER.....	249
Fields regularly closed with respect to finitely many valuations and orderings	
B. HEINEMANN and A. PRESTEL.....	297
