

# Contents

Editorial Note . . . . .	vii
Preface and Acknowledgements . . . . .	ix
<b>1 Introduction . . . . .</b>	<b>1</b>
<b>2 Pattern, Variation and Inference . . . . .</b>	<b>6</b>
2.1 A framework for discussion . . . . .	6
2.2 Summarization of data . . . . .	8
2.3 Probability models for variation . . . . .	11
2.4 Inference about the parameters of distributions . . . . .	25
References . . . . .	38
<b>3 Collection of Data: Design and Analysis of Surveys . . . . .</b>	<b>40</b>
3.1 The background . . . . .	40
3.2 The literature . . . . .	41
3.3 Sample designs . . . . .	42
3.4 The design effect and methods for increasing precision . . . . .	49
3.5 Choice and allocation of sample size . . . . .	52
3.6 Response errors . . . . .	55
3.7 Non-response . . . . .	58
3.8 Randomized response methods . . . . .	61
3.9 Inference in sample surveys . . . . .	63
References . . . . .	64
<b>4 Multivariate Methods in Social Science . . . . .</b>	<b>67</b>
4.1 An overview . . . . .	67
4.2 The literature of multivariate methods . . . . .	69
4.3 The general linear model . . . . .	70
4.4 Classification methods . . . . .	83
4.5 Structure and dimensionality . . . . .	89
References . . . . .	102
<b>5 The Dynamics of Social Systems . . . . .</b>	<b>105</b>
5.1 Introduction and literature . . . . .	105
5.2 Discrete time Markov models for closed systems . . . . .	109
5.3 Generalizations and extensions of the closed Markov model . . . . .	113
5.4 Markov systems with gains and losses . . . . .	117
5.5 Control and optimization of Markov models . . . . .	119
5.6 Vacancy chains . . . . .	125
5.7 Continuous time models . . . . .	126

5.8	Statistical problems of implementation . . . . .	129
5.9	Renewal theory models . . . . .	130
5.10	Autoregressive and simultaneous equation models . . . . .	132
5.11	The diffusion of news, innovations and rumours . . . . .	134
	References . . . . .	144
Index	. . . . .	149
