The Alexander horned sphere	12
A space with nontrivial local homology	14
Topological zoo	16
A 2-adic solenoid	18
The star diagram of Hertzsprung and Russell	20
Geometry of the spectrum-luminosity diagram	22
A spectral sequence	24
The cylinder of a continuous mapping	26
A fiber space	28
Spectral sequences and orbits of the action of groups	30
The action of the fundamental group on the higher homotopy groups	32
Homotopy groups of spheres	34
Deformation of the Riemann surface of an algebraic function	36
Morse functions and the theorem about the Euler characteristic	38
The separatrix diagram of a critical saddle point of a smooth function on a 3-dimensional manifold	40
Proper Morse functions on 3-dimensional manifolds	42
Motion of a heavy rigid body in space	44
An algebraic Kummer surface and its singular points	46
2-dimensional polyhedra and incidence matrices	48
Simplicial, cubic, cellular chains	50

Algebraic surfaces of higher order and the simplicial approximation theorem	52
The Euclidean plane — the simplest minimal surface	54
A theorem in symplectic geometry	56
Turbulence and associations outside mathematics	58
Spines of 3-dimensional manifolds	60
An orbit of the action of an infinite group	62
The boundary of polyhedra can be diminished when they are glued together.	64
A nontrivial knot in 3-dimensional space	66
Between two maxima there is always a saddle point.	68
A 2-dimensional sphere in 3-dimensional space can be turned inside out.	70
Simplicial complexes	72
Polyhedra and simplicial chains	74
The boundary operator	76
The method of killing spaces in homotopic topology	78
The theorem on the coincidence of simplicial and cellular homology	80
A system of shrinking neighborhoods	82
Singularities of smooth functions	84
Simplicial spaces, cellular spaces, crystal and liquid	86
Rolling and sliding	88
Combinatorial contraction	90
Geometric fantasy on the theme of analytic functions	92
Discrete groups generated by reflections	94

Construction of complicated polyhedra from simple ones, I	96
Construction of complicated polyhedra from simple ones, II	98
Construction of complicated polyhedra from simple ones, III	100
Construction of complicated polyhedra from simple ones, IV	102
From chaos to order	104
Mathematical infinity	106
Interior and boundary points of a manifold and symmetric spaces	108
Theory of oscillations and wave processes	110
Impact	112
Billiards and ergodicity	114
The Poisson-Laplace theorem and the Plateau principles	116
A heavy top drifting in space	118
How does a drop of liquid tear loose?	120
Branched coverings over a sphere	122
Anti-Dürer. From the cycle: Dialogue with authors of the 16th century	124
A stare	126
A retraction of a space onto a subspace of it	128
Spines of two 3-dimensional compact closed hyperbolic manifolds of smallest complexity	130
Picture of a gas flowing around a ball	132
Cellular spaces	134
Random processes in probability	136
Statistical fantasy	138

The remarkable numbers pi and e, II	140
The remarkable numbers pi and e, I	142
Geometry and probability	144
Gaussian distributions, I	146
Unstructured chaos and geometry	148
Gaussian distributions, II	150
Homotopy and the tearing off of a drop from a hard surface	152
Homotopy and a viscous liquid	154
Level surfaces of functions	156
Gradient descent	158
Portrait of my wife, Tanya	160
Mathematical preciseness and the concept of a fuzzy set	162
Singular points of vector fields and the boundary layer in the flow of a liquid around a rigid body	164
The music club “Topaz” in the Mechanics–Mathematics Department of Moscow University	166
The apocalypse (Revelation)	168
The temptation of St. Anthony	170
Anti-Breughel. From the cycle: Dialogue with authors of the 16th century	172
Geometric fantasy	174
Geometric fantasy	176
Topological restructuring of level surfaces of smooth functions on manifolds	178
