

CONTENTS

Preface *xi*

Index of applications *xv*

Introduction 2

1. Linear Equations and Straight Lines 5

1.1. Coordinate Systems and Graphs 5

1.2. Linear Inequalities 13

1.3. The Intersection Point of a Pair of Lines 22

1.4. The Slope of a Straight Line 27

2. Matrices	<i>39</i>
2.1. Solving Systems of Linear Equations, I	<i>39</i>
2.2. Solving Systems of Linear Equations, II	<i>51</i>
2.3. Arithmetic Operations on Matrices	<i>59</i>
2.4. The Inverse of a Matrix	<i>74</i>
2.5. The Gauss-Jordan Method for Calculating Inverses	<i>85</i>
2.6. Input-Output Analysis	<i>91</i>
3. Linear Programming, A Geometric Approach	<i>101</i>
3.1. The Feasible Set of a Linear Programming Problem	<i>101</i>
3.2. Linear Programming, I	<i>109</i>
3.3. Linear Programming, II	<i>116</i>
4. The Simplex Method	<i>129</i>
4.1. Slack Variables and the Simplex Tableau	<i>130</i>
4.2. The Simplex Method, I—Maximum Problems	<i>139</i>
4.3. The Simplex Method, II—Minimum Problems	<i>151</i>
5. Sets and Counting	<i>163</i>
5.1. Sets	<i>163</i>
5.2. A Fundamental Principle of Counting	<i>170</i>
5.3. Venn Diagrams and Counting	<i>177</i>
5.4. The Multiplication Principle	<i>183</i>
5.5. Permutations and Combinations	<i>188</i>
5.6. Further Counting Problems	<i>194</i>
5.7. The Binomial Theorem	<i>200</i>
5.8. Multinomial Coefficients and Partitions	<i>206</i>

6. Probability 215

- 6.1. Introduction 215
- 6.2. Experiments, Outcomes, and Events 217
- 6.3. Assignment of Probabilities 226
- 6.4. Application of Counting Methods 235
- 6.5. Conditional Probability and Independence 242
- 6.6. Tree Diagrams 252
- 6.7. Bayes' Theorem 259

7. Probability and Statistics 267

- 7.1. Probability Distributions and Random Variables 268
- 7.2. The Mean of a Probability Distribution 278
- 7.3. The Variance and Standard Deviation of a Probability Distribution 287
- 7.4. The Normal Distribution 295
- 7.5. Binomial Trials 304

8. Markov Processes 317

- 8.1. The Transition Matrix 318
- 8.2. Regular Stochastic Matrices 328
- 8.3. Absorbing Stochastic Matrices 337

9. The Theory of Games 351

- 9.1. Games and Strategies 351
- 9.2. Mixed Strategies 358
- 9.3. Determining Optimal Mixed Strategies 366

10. Difference Equations and the Mathematics of Finance 377

- 10.1. Introduction to Difference Equations, I 377
- 10.2. Introduction to Difference Equations, II 385
- 10.3. Graphing Difference Equations 393
- 10.4. The Mathematics of Personal Finance 405
- 10.5. Modeling with Difference Equations 410

Appendix

Table A1

Table 1. Areas Under the Standard Normal Curve A2

Answers to Odd-Numbered Exercises A3

Index A25
