

# Contents

1	The Role of the Literature in Mathematics	
	by A.R. Dorling	1
1.1	Introduction	1
1.2	The author approach to the literature	3
1.3	Conferences	4
1.4	Unpublished material	6
1.5	Books	7
1.6	Future trends	8
2	Major Organisations and Journals	
	by A.R. Dorling	10
2.1	Introduction	10
2.2	International Mathematical Union	11
2.3	American Mathematical Society	14
2.4	London Mathematical Society	16
2.5	Other national societies	17
2.6	University publications	18
2.7	Journals from commercial publishers	18
2.8	Translations	20
2.9	Monograph series	22
2.10	Bourbaki	23
3	Reference Material	
	by S. Brookes	25
3.1	Encyclopaedias	25
3.2	Handbooks	28
3.3	Abstracting journals	29

3.4	Bibliographies	32
3.5	Biography	32
3.6	Dictionaries	34
4	Mathematical Education	
	by A. G. Howson	40
4.1	Introduction	40
4.2	Journals and indexing periodicals	41
4.3	Associations and international organisations	43
4.4	The development of mathematical education	45
4.5	Surveys	47
4.6	The psychology of mathematics learning	47
4.7	Curriculum design	48
4.8	Assessment and examinations	50
4.9	Teacher training	51
4.10	Educational technology and independent learning methods	52
4.11	Apparatus and films	53
4.12	Mathematical competitions and other extracurricular activities	54
4.13	The needs of society and, in particular, of other subjects	55
4.14	Computers	56
4.15	Research in mathematical education	57
4.16	Addresses of organisations	58
5	History of Mathematics	
	by I. Grattan-Guinness	60
5.1	Introduction	60
5.2	Bibliographies and catalogues	61
5.3	Journals for the history of mathematics	62
5.4	Books and editions	64
5.5	Libraries and catalogues	72
5.6	Manuscripts and archives	73
5.7	Societies	74
5.8	The Open University	75
5.9	State and nature of the art	75
6	Logic and Foundations	
	by W.A. Hodges and G.T. Kneebone	78
6.1	Introduction	78
6.2	Justification of mathematics	79
6.3	Formal theories and metamathematics	80

<i>Contents</i>		<i>xi</i>
6.4	Intuitionism and constructivism	82
6.5	Recursion theory	82
6.6	Decision problems	85
6.7	Axiomatic set theory	86
6.8	Descriptive set theory	87
6.9	Model theory	88
6.10	Generalisations of model theory	89
6.11	Universal algebra	90
6.12	Infinitary combinatorics	90
7	Combinatorics	
	by N.L. Biggs and R.P. Jones	96
7.1	Introduction	96
7.2	Enumeration	97
7.3	Combinatorial set theory	98
7.4	Graph theory	101
7.5	Finite geometries and designs	104
7.6	Coding theory	106
7.7	Applications	108
8	Rings and Algebras	
	by P.M. Cohn	114
8.1	Introduction	114
8.2	Associative rings	115
8.3	Commutative rings	119
8.4	Categories and homological algebra	120
8.5	Lie algebras and other non-associative algebras	122
8.6	Monoids and more general systems	123
8.7	Periodicals	124
9	Group Theory	
	by Peter M. Neumann	134
9.1	Introductory works	134
9.2	Finite groups	135
9.3	Representation theory	140
9.4	Infinite groups	142
9.5	Algebraic and Lie groups	146
9.6	Related structures	148
10	Measure and Probability	
	by S.J. Taylor	155
10.1	Theory of measure	155

10.2	Probability theory	164
10.3	Stochastic processes	169
11	Complex Analysis and Special Functions	
	by I.N. Sneddon	175
11.1	Basic texts in complex analysis	175
11.2	Special topics in complex analysis	177
11.3	Functions of several complex variables	180
11.4	General texts on special functions	181
11.5	Special topics in the theory of special functions	183
12	Convexity	
	by P. McMullen	189
12.1	Introduction	189
12.2	Basic theory	190
12.3	Combinatorial theory	196
12.4	Metrical theory	204
13	Topology	
	by J.F. Adams and A.R. Pears	217
13.1	Introduction	217
13.2	Algebraic topology	218
13.3	Manifolds	220
13.4	General topology	226
14	Mathematical Programming	
	by J.M. Brown	229
14.1	Introduction	229
14.2	Reviews and general coverage books	230
14.3	Bibliography, abstracts and retrieval systems	230
14.4	Periodicals	231
14.5	Linear programming	232
14.6	General non-linear programming	233
14.7	Geometric programming	234
14.8	Unconstrained optimisation	234
14.9	Dynamic programming	235
14.10	Integer and zero-one programming	236
14.11	Transportation and flow networks	236
14.12	Combinational programming	237
