CONTENTS

Preface xi *Notation and abbreviations* xv

1 'Philosophy of logics' 1

Logic, philosophy of logic, metalogic 1

The scope of logic 3

2 Validity 11

Assessing arguments 11

Deductive validity: with some brief comments about inductive strength 13
Validity in a system; Extra-systematic validity; Logica utens and logica docens; Inductive strength

Formal logical systems: the 'L' in 'valid-in-L' 17
Notational variants; Alternative primitive constants; Axiomatic and natural deduction formulations; Alternative axioms and/or rules

Validity and logical form 22

3 Sentence connectives 28

Formal considerations 28
Adequate sets of connectives: functional completeness; Characteristic matrices: decidability; Many-valued logic

The meanings of the connectives 30
Formal languages and informal readings; 'tonk'; Aims of formalisation; '&' and 'and', '∨' and 'or', etc.

4 Quantifiers 39

The quantifiers and their interpretation 39

Metaphysical interlude: Quine on quantification and ontology 43
The criterion of ontological commitment; Substitutional quantification and ontology

The choice of interpretation 50
Substitutional quantifiers and truth; Too few names?; Tense; Modality; Second-order quantification

5 Singular terms 56

Singular terms and their interpretation 56

Names 57
Names as purely denotative; Names assimilated to descriptions

Descriptions 65

Non-denoting names: fiction 70

6 Sentences, statements, propositions 74

Three approaches 74

Sentence, statement, proposition 75

'Sentence letters', 'propositional variables', or what? 78

Truth-bearers 79
Truth-bearers and theory of truth

The problem reformulated 83
Validity again

7 Theories of truth 86

A summary sketch 86
Definitions versus criteria of truth

Correspondence theories 91

Coherence theories 94

Pragmatic theories 97

The semantic theory 99
Adequacy conditions on definitions of truth; Material adequacy; Formal correctness; Tarski's definition of truth; Informal account; Formal account

Commentary on the semantic theory 110
Tarski's own estimate; Popper's claims on behalf of Tarski's theory; Davidson's use of Tarski's theory

The redundancy theory 127
Ramsey; Truth-bearers; The object language/metalanguage distinction; The quantifiers: '(p) (if he asserts that p, p)'; The 'prosentential theory of truth'

8 Paradoxes 135

The Liar and related paradoxes 135
'Set-theoretical' versus 'semantic' paradoxes?

'Solutions' to the paradoxes 138
Requirements on a solution; Russell's solution: the theory of types, the vicious circle principle; Tarski's solution: the hierarchy of languages; Kripke's solution: groundedness

Paradox without 'false'; some remarks about the redundancy theory of truth; and the V.C.P. again 149

9 Logic and logics 152

'Classical' and 'non-classical' logics 152

Responses to pressure to change the standard formalism 153

First case-study: the logic of temporal discourse 156

Second case-study: precisification versus 'fuzzy logic' 162
Postscript: degrees of truth

10 Modal logic 170

Necessary truth 170

Modal systems 175
Extensions of classical logic; Historical remarks; A formal sketch; Relations between the modal systems

Criticisms of modal logic 178
Modal logic 'was conceived in sin'; Modal logic is not needed; The interpretation of modal logic is fraught with difficulties

Semantics for modal logics 187
Formal semantics – a sketch; 'Pure' and 'depraved' semantics; Approaches to possible worlds; Approaches to possible individuals: transworld identity; Quine's doubts confirmed?

Prospects 195

Implication again: a postscript on 'relevance logic' 197
The 'paradoxes' of strict implication; Relevance logic

11 Many-valued logic 204

Many-valued systems 204
Restrictions of classical logic: deviant logics; Historical remarks; Formal sketch

Philosophical motivations 208
Future contingents; Quantum mechanics; Semantic paradoxes; Meaninglessness; Sense without denotation; Undecidable sentences

Many-valued logics and truth-values 213

Non-truth-functional deviant logics 215
Supervaluations; Intuitionist logic

12 Some metaphysical and epistemological questions about logic 221

Metaphysical questions 221
Monism, pluralism, instrumentalism; The issues summarised; Comments

Epistemological questions 232
What is fallibilism?; Does fallibilism extend to logic?; A digression: 'Two dogmas' again; Revision of logic

Logic and thought 238

Glossary 243

Advice on reading 253

Bibliography 255
